Biomass-based Bioplastic and Films Oluwatoyin Joseph Gbadeyan, Nirmala Deenadayalu, 2024-10-24 This book provides a platform for researchers, engineers, and manufacturers to conceptualize green ideas for sustainably developing plastics and films from biomass and agricultural waste. The upscaling of sustainable bioplastic production is essential for the economic growth of industries and local communities as a means to tackle waste management issues. Therefore, this book acts as a guide to characterize various methodologies and applications for producing usable bioplastic products that will lift the burden imposed by excessive industrial waste pollution. This framework will not only contribute to support the health and management of local communities impacted by waste pollution, but will also support businesses economically through efficient and sustainable recycling practices. This work will inform readers in academia, business, and government sectors with the knowledge needed to control the waste generated from various sources and transfer them to valuable products.

Handbook of Biopolymers and Biodegradable Plastics Sina Ebnesajjad, 2012-12-31 Biopolymers and Biodegradable Plastics are a hot issue across the Plastics industry, and for many of the industry sectors that use plastic, from packaging to medical devices and from the construction industry to the automotive sector. This book brings together a number of key biopolymer and biodegradable plastics topics in one place for a broad audience of engineers and scientists, especially those designing with biopolymers and biodegradable plastics, or evaluating the options for switching from traditional plastics to biopolymers. Topics covered include preparation, fabrication, applications and recycling (including biodegradability and compostability). Applications in key areas such as films, coatings controlled release and tissue engineering are discussed. Dr Ebnesajjad provides readers with an in-depth reference for the plastics industry - material suppliers and processors, biopolymer producers, bio-polymer processors and fabricators - and for industry sectors utilizing biopolymers - automotive, packaging, construction, wind turbine manufacturers, film manufacturers, adhesive and coating industries, medical device manufacturers, biomedical engineers, and the recycling industry. Essential information and practical guidance for engineers and scientists working with bioplastics, or evaluating a migration to bioplastics. Includes key published material on biopolymers, updated specifically for this Handbook, and new material including coverage of PLA and Tissue Engineering

Scaffolds. Coverage of materials and applications together in one handbook enables engineers and scientists to make informed design decisions.

Value-Addition in Agri-Food Industry Waste Through Enzyme Technology Mohammed Kuddus,Pramod W.

Ramteke,2023-02-08 Value Addition in Agri-Food Industry Waste through Enzyme Technology, Volume Three explores advances in the production of high value-added products from agri-food industry waste/residues using enzyme technology. Waste materials used in hydrogen production are categorized as agricultural waste, municipal waste, industrial waste, and other hazardous wastes. The book explores advances in value-addition to waste materials and includes utilization of industrial, agricultural and municipal waste for its bioconversion using enzyme technology. This book assembles the novel sources and technologies involved in value-added products formation from specific waste materials, making it an essential reference to professionals, scientists, and academics in agri-food and related industries. - Provides biotechnological tools used in valorizing waste for the agri-food industry - Presents novel and eco-friendly alternative processes to produce value added products by food waste utilization - Discusses valuable molecules from agriculture and food industry residues as a future sustainable solution to improve public health and protect the environment

It can be created by extracting sugar from plants like corn and sugarcane and converting it into polylactic acids (PLAs), or it can be made from microorganism-engineered polyhydroxyalkanoates (PHAs). Bioplastics are plastics made from renewable biomass sources such vegetable fats and oils, corn starch, straw, woodchips, sawdust, and recovered food waste, among others. Common plastics, such as fossil-fuel plastics (also known as petro-based polymers), on the other hand, are made from petroleum or natural gas. Biodegradable Products Manufacturing (Bio-Products) are all types of natural and artificial products that can be easily decomposed without causing any damage to the environment. The significant examples of Biodegradable Products are Biodegradable Plastic, Biodegradable Airline Meals, Bio-degradable Toilet Paper, Biodegradable Cups etc. It has become the need of the hour to use these products as most of the goods like Plastics take many years to decompose in nature and this affects the environment adversely with time. The worldwide bioplastics market is predicted to increase at a CAGR of 17.1 percent over the next five years. The packaging industry's rising product demand will propel the market even higher. The book covers a wide range of topics connected to bioplastics and biodegradable products, as well as their manufacturing processes. It also includes contact information for machinery suppliers, as well as images of equipment and plant layout. A comprehensive reference to manufacturing and entrepreneurship in the bioplastics and biodegradable products business. This book is a one-stop shop for everything you need to know about the bioplastics and biodegradable products manufacturing industry, which is ripe with potential for manufacturers, merchants, and entrepreneurs. This is the only comprehensive guide to commercial bioplastics and biodegradable products manufacture. It provides a feast of how-to knowledge, from concept through equipment purchase.
