Strategic Management Sushil, Sanjay Dhir, 2024-09-25 This book emphasizes the concepts of strategic innovation and entrepreneurship, which are quite prevalent in today's organizations. Going beyond traditional approach that follows strategic analysis, choice and implementation framework, and traditional theories based on industrial organization paradigm and resource-based view, the book considers current business environment, which is volatile, uncertain, complex, chaotic, conflicting, and ambiguous (VUCA). It takes the strategic flexibility view to cope with these strategic challenges. The book introduces the subject matter of strategic management in retrospect and prospect, highlighting critical theories of strategic management. It uses a strategic learning framework rather than a purely analytical approach to dynamically learn about the external situation, internal resources, and capabilities. The evolution of strategy is given in terms of generic strategies in practice and adaptation in specific contexts. It further deals with essential topics such as strategic alliances and networks, mergers and acquisitions, and global strategy. It then provides the execution framework and models covering restructuring, leadership, corporate governance, and change management. The strategy in specific areas such as strategic technology management, e-business and knowledge management, and functional strategies and policies are discussed to understand the implementation depth. Finally, it touches upon contemporary issues such as sustainable enterprise, stakeholder perspectives, and comparative strategies in various contexts. It then outlines future directions of strategic management. In the end, case analysis guidelines are provided with sample cases from different parts of the world. The book also used interpretive and simulation methods such as system dynamics and total interpretive structural modeling to grasp the relationships and their dynamic impact provided throughout the book. It will be an invaluable resource for researchers of business strategy as well as students studying these courses; it will also be useful for industry practitioners, corporates and business policy makers.

Strategic Analysis of eBay Martin Lüthge, 2004-02-05 Master's Thesis from the year 2003 in the subject Business economics - Business Management, Corporate Governance, grade: 1.0 (A), Berlin School of Economics (MBA - International and European Management), course: International Strategic Management, language: English, abstract: In the middle of the 90's, the importance of the Internet increased significantly. Due to the prognosticated prospects and expectations of the Internet, it did not need a long time until innumerable companies with business models focused on the Internet were

established. Only few of these Internet business models have reached an international size or work profitable so far. However, one of the companies, which reached these objectives, is eBay. Within this strategy paper, the development of the enterprise and the strategic figures are identified, analysed and evaluated. Furthermore, an evaluation of the environment, the market, the competition as well as financial indices was conducted, in order to evaluate the development potentials as well as the future chances and risks of the company.

Key success factors through internal organisation and external cooperation. An analyses of the most innovative platforms from China and the USA Eileen-Natalie Gerlach, 2022-01-31 Master's Thesis from the year 2021 in the subject Economics - Innovation economics, grade: 1,1, University of applied sciences, Munich, language: English, abstract: This thesis analyses the most innovative platforms from China and the United States of America in order to provide the key success factors through internal organisation and external cooperation. The findings are concluded in a role model for digital innovation and an innovation scorecard, that helps to compare the innovation level of a company in electronic markets with its competition. In digital markets, the level of innovation as well as state-of-the art technologies are massively influencing the success of companies. Here, innovation takes place on two different levels: first, it describes the transformation of incumbent companies towards a digital platform, and second it depicts the innovative pressure within the highly competitive environment of native digital platforms such as Google or Alibaba, that must constantly and fast evolve in order to maintain their leadership position. In the native platform segment, innovation is mostly achieved with business cooperation in order to gain technological knowledge, whereas innovation relating to incumbents mostly deals with an internal reorganisation of existing structures, that is often very individual and varies from company to company.

The Impact of Mobile Services on the Interaction between Airlines and Passengers Markus Biedermann,Doron Levy,2015-01-30 Seminar paper from the year 2013 in the subject Business economics - Offline Marketing and Online Marketing, , language: English, abstract: The purpose of this paper is to research how mobile services impact the interaction between airlines and passengers. The paper begins with a PEST analysis of the European airline industry and focuses on technological changes. It continues with a SWOT analysis of Lufthansa, where we interlink mobile technology as a platform which could reduce costs for the airline. In-depth research on mobile services and their impact on the interaction between airlines and passengers is performed by evaluating different mobile services along Lufthansa's value chain, namely the

airline's activities in operations, outbound logistics and marketing and sales. We claim that the interaction through mobile services is limited to one-way interaction, where airlines embrace the mobile services to perform cost reduction along their value chain, and neither offer two-way interaction with their passengers nor asking them to co-create the brand or the product. The current wireless mobile services are already offered via the internet, and allow a better and direct service for passengers. Mobile services are necessary for airlines, so they are not seen as out of date, but it does not mean that having mobile services contributes to having a competitive advantage. On the contrary, not having mobile services results in strategic disadvantage.
