

Out Of Africa Theorie

Kurt Büttner

After nature Franz-Josef Deiters, 2010

Theories on Africa and Neo-colonialism Kurt Büttner, 1971

Encyclopedia of Population: I-W Paul George Demeny, Geoffrey McNicoll, 2003 Provides expanded, up-to-date coverage of demographic topics both in the core field and in neighboring disciplines. Designed to encompass the large-scale changes in emphasis and research directions in population studies during the last 20 years, topics covered include: rapid demographic expansion in poor countries; low fertility rates and problems of old-age support; the environmental impact of a dense population; the press for expanded reproductive rights; and much more.

Africa on the Move Malte Steinbrink, Hannah Nietenführ, 2019-10-31 This book discusses migration and space-spanning social network relationships as normal realities of life in African societies. It offers an overview of the research landscape and introduces an agency-centered theoretical model that provides a conceptual framework for translocality. The authors Malte Steinbrink and Hannah Nietenführ plead for a translocal approach to social transformation, showing how the translocality of livelihoods is shaping the lives of half a billion people on the continent and impacting local conditions. Using an action-oriented approach, the book analyzes the effects of translocal livelihoods on diverse aspects of economic, environmental and social change in rural Sub-Saharan Africa. The study thus makes an innovative contribution not only to migration research and development studies but also to the discussion around the policy and practice of development cooperation and planning. It is time to rethink development in light of translocal realities. The book appeals to scholars and researchers in geography, sociology, policy-making and planning, development studies, migration research and rural development.

African Exodus Chris Stringer, Robin McKie, 2015-07-14 A Choice Outstanding Academic Book A Library Journal Best Sci-Tech Book A New York Times Notable Book Once in a generation a book such as African Exodus emerges to transform the way we see ourselves. This landmark book, which argues that our genes betray the secret of a single racial stock shared by all of modern humanity, has set off one of the most bitter debates in contemporary science. We emerged out of Africa, the authors cont, less than 100,000 years ago and replaced all other human populations. Employing persuasive fossil and genetic evidence (the proof is in the blood, not just the bones) and an exceptionally readable style, Stringer and McKie challenge long-held beliefs that suggest we evolved separately as different races with genetic roots reaching back two million years.
