Wood Gasifier Builder's Bible Ben Peterson,2014-06-29 The Wood Gasifier Builder's Bible is a step-by-step construction manual to build a powerful woodgas generator with advanced features, yet needing only a minimal build budget. Wood gasification extracts the stored sunlight in wood to create a gaseous biofuel rich in hydrogen. It's like having your own personal scale natural gas refinery. How would you like to make your own free fuel... for life? Cut your utility bills, alt fuel vehicles and farm equipment or just go way off-grid. It's all possible using locally available wood you can pick up off the ground and a little known technology that helped kick off the Industrial Revolution. Does it work? It powered 1 million installations in Europe during WW2 and saved the continent. Now, this new book builds on those traditional WW2 designs and improves them dramatically with automation and advanced heat recycling for better performance and stronger, cleaner gas. This book is for you if you are a: biofueler, solar panel owner, back to the lander, off-gridder, hydrocarbon hacker, hydrogen enthusiast, prepper, patriot, survivalist, permaculturalist, welder, engineer, fabricator, blacksmith, wood worker, alternative fuel researcher, WW2 buff, inventor, tinkerer, or just a curious minded problem solver. Finally a construction manual that spells it out step-by-step and divulges the secrets to the lost art of wood gasifier construction in easy to follow detail. A must-have book in your library. Do it right the first time and save enormous amounts of time and money. The Wood Gasifier Builder's Bible will show you how.

Power with Nature Rex A. Ewing,2013-01-15 Covers renewable energy options for grid-tied and off-grid homeowners, including solar energy (passive and active), wind power, microhydro energy, geothermal heat pumps, solar water heating, biomass heating, backup generators and pumping/storing water. Also examines energy conservation, system sizing/pricing, and tax incentives--

Biofuels Handbook James G Speight,2015-10-09 Petroleum-based fuels are well-established products that have served industry and consumers for more than one hundred years. However petroleum, once considered inexhaustible, is now being depleted at a rapid rate. As the amount of available petroleum decreases, the need for alternative technologies to produce

liquid fuels that could potentially help prolong the liquid fuels culture and mitigate the forthcoming effects of the shortage of transportation fuels is being sought. The dynamics are now coming into place for the establishment of a synthetic fuels industry; the processes for recovery of raw materials and processing options have to change to increase the efficiency of oil production and it is up to various levels of government not only to promote the establishment of such an industry but to recognise the need for available and variable technology. This timely handbook is written to assist the reader in understanding the options that available for the production of synthetic fuel from biological sources. Each chapter contains tables of the chemical and physical properties of the fuels and fuel sources. It is essential that the properties of such materials be presented in order to assist the researcher to understand the nature of the feedstocks as well as the nature of the products. If a product cannot be employed for its hope-for-use, it is not a desirable product and must be changed accordingly. Such plans can only be made when the properties of the original product are understood. The fuels considered include conventional and unconventional fuel sources; the production and properties of fuels from biomass, crops, wood, domestic and industrial waste and landfill gas.
