

Balance De Materia Y Energa Procesos Industriales

Pontificia Universidad Católica del Perú

Balance de Materia y Energía Raúl Monsalvo Vázquez, María Guadalupe Miranda Pascual, María Del Rocío Romero Sánchez, Graciela Muñoz Perez, 2014-10-21 En este texto el lector encontrará los principios fundamentales y técnicos de los balances de la materia y la energía, así como de las operaciones y procesos unitarios que se emplean en las industrias química, de alimentos, ambiental y del petróleo. De esta forma, el lector se familiarizará con un buen número de temas que le serán útiles durante todos sus estudios y vida profesional. Uno de los aspectos más importantes de la obra, es que los autores proponen una metodología para la solución de los problemas, con la idea de que el estudiante no se preocupe tanto por las matemáticas, sino que se enfoque en entender realmente los procesos y sea capaz de resolver diferentes situaciones que se le presentarán en la industria durante su vida profesional. En cada capítulo se podrá encontrar gran variedad de imágenes, esquemas, ejemplos, problemas (se proporcionan las respuestas de algunos de ellos; así se logra cierto grado de práctica en la aplicación de los conceptos) y temas de actualidad que vinculan los conceptos teóricos con situaciones que se viven día a día en nuestra vida, como por ejemplo los problemas de contaminación en China durante los pasados juegos olímpicos.

Cálculo de balances de materia y energía Ernest J. Henley, 1973 Este texto corresponde a un curso de Estequiometría y Termodinámica. Se supone que los estudiantes han de estar capacitados para saber cómo los balances de materia y energía se transforman en componentes integrales de los sistemas de diseño con ayuda de máquinas calculadoras, que están asumiendo una parte importante y creciente de nuestra experiencia profesional. Sin embargo, se ha procurado no perder de vista los métodos tradicionales.

Gobiernos y sociedad civil avanzando agendas climáticas Flavia Milano,2019-04-26 La aprobación del Acuerdo de París en diciembre de 2015 conformó un nuevo régimen global en materia de cambio climático. Asimismo, los países de América Latina y el Caribe también participan y adhieren a otros procesos en materia de sostenibilidad ambiental, entre los cuales se encuentran el desarrollo nacional de la Agenda 2030 y el Principio 10 / Acuerdo de Escazú. Estos tres instrumentos, entre otros, reconocen la importancia de un relacionamiento efectivo con la Sociedad Civil para el mejor avance e implementación de los compromisos y objetivos de sostenibilidad ambiental. El Grupo BID, además de aportar su conocimiento en la materia, sumó su experiencia técnica entorno a la participación ciudadana, realizando un diagnóstico regional en Argentina, Chile, Colombia, Costa Rica, Perú, México y Jamaica desde la perspectiva de las buenas prácticas empleadas por los gobiernos para el avance de sus compromisos ambientales con la inclusión de la Sociedad Civil. El diagnóstico da un marco metodológico que permite identificar, sistematizar y analizar buenas prácticas en materia de participación ciudadana para el avance de las agendas climáticas y de sostenibilidad ambiental de los gobiernos. Está estructurado en 3 capítulos: (i) un marco conceptual orientador sobre la metodología, que incluye definiciones relevantes para el análisis de buenas prácticas de relacionamiento; (ii) una selección de buenas prácticas de relacionamiento en la agenda climática y de sostenibilidad ambiental para cada uno de los siete países estudiados, susceptibles de ser replicadas en otros países; (iii) un análisis comparado, con recomendaciones y hojas de ruta basadas en los hallazgos del diagnóstico.

Innovación y sustentabilidad energética Ma Soledad Ramírez-Montoya,Alberto Mendoza-Domínguez,2019-04-01 Este libro es el segundo tomo de la colección de Innovación y sustentabilidad energética. Destacan aquí las experiencias e investigaciones educativas en el marco de: Openenergy Lab para desarrollar recursos educativos abiertos de energía, sistemas de gestión del conocimiento para la visibilidad de la producción energética y cuatro cursos masivos abiertos (MOOCs) de formación en temas de energía. En el momento en que se presenta este libro, los MOOC han contado con más de 100,000 participantes, de más de 51 países (dato de la plataforma EdX, donde destacan diez países por cantidad de participantes: México, España, Perú, Colombia, Argentina, Estados Unidos, Ecuador, Chile, Venezuela y Guatemala). El soporte conceptual de la sustentabilidad energética, abordado en los MOOC, se vinculó con el sector productivo y con la realidad energética

que ofrece nuevas oportunidades. El soporte de innovación educativa se dio a través de la implementación de estrategias poco abordadas en los MOOC, como lo son la realidad virtual, realidad aumentada, biometría, gamificación y los laboratorios virtuales y remotos. El soporte de investigación se dio a través de estudios con metodologías mixtas, comparativas y de casos. Esta obra ofrece aportes de innovación educativa, formación en sustentabilidad energética, investigación educativa y desarrollos tecnológicos para potencializar la formación de capacidades en ambientes de aprendizaje modernos.

Problemas de Balances de Materia y Energía Francisco Espínola Lozano, 2021-07-12 Los estudios de Ingeniería Química se suelen iniciar con los problemas de balances de materia y energía aplicados a unidades o procesos simples. En este libro se trata el tema exponiendo un método analítico de resolución de los mismos y utilizando un simulador de procesos, Aspen Plus®, lo que ayuda enormemente a la contextualización. Además, el texto va asociado a dos canales de YouTube® con más de 70 videos, que irán aumentando con el tiempo: Ingeniería Química con ASPEN PLUS. F.
