Performance Modeling and Engineering Zhen Liu, Cathy H. Xia, 2008-04-12 With the fast development of networking and software technologies, information processing infrastructure and applications have been growing at an impressive rate in both size and complexity, to such a degree that the design and development of high performance and scalable data processing systems and networks have become an ever-challenging issue. As a result, the use of performance modeling and measurement techniques as a critical step in design and development has become a common practice. Research and development on methodology and tools of performance modeling and performance engineering have gained further importance in order to improve the performance and scalability of these systems. Since the seminal work of A. K. Erlang almost a century ago on the modeling of telephone traffic, performance modeling and measurement have grown into a discipline and have been evolving both in their methodologies and in the areas in which they are applied. It is noteworthy that various mathematical techniques were brought into this field, including in particular probability theory, stochastic processes, statistics, complex analysis, stochastic calculus, stochastic comparison, optimization, control theory, machine learning and information theory. The application areas extended from telephone networks to Internet and Web applications, from computer systems to computer software, from manufacturing systems to supply chain, from call centers to workforce management.

**Economic Models and Algorithms for Distributed Systems** Dirk Neumann,Mark Baker,Jörn Altmann,Omer F. Rana,2010-02-13 Distributed computing paradigms for sharing resources such as Clouds, Grids, Peer-to-Peer systems, or voluntary computing are becoming increasingly popular. While there are some success stories such as PlanetLab, OneLab, BOINC, BitTorrent, and SETI@home, a widespread use of these technologies for business applications has not yet been achieved. In a business environment, mechanisms are needed to provide incentives to potential users for participating in such networks. These mechanisms may range from simple non-monetary access rights, monetary payments to specific policies for sharing. Although a few models for a framework have been discussed (in the general area of a Grid Economy), none of these models has yet been realised in practice. This book attempts to fill this gap by discussing the reasons for such limited take-up and exploring incentive mechanisms for resource sharing in distributed systems. The purpose of this book is to identify research challenges in successfully using and deploying resource sharing strategies in open-source and commercial distributed systems.

**Anti-Cartel Enforcement in a Contemporary Age** Caron Beaton-Wells,Christopher Tran,2015-09-24 Leniency policies are seen as a revolution in contemporary anti-cartel law enforcement. Unique to competition law, these policies are regarded as essential to detecting, punishing and deterring business collusion – conduct that subverts competition at national and global levels. Featuring contributions from leading scholars, practitioners and enforcers from around the world, this book

probes the almost universal adoption and zealous defence of leniency policies by many competition authorities and others. It charts the origins of and impetuses for the leniency movement, captures key insights from academic research and practical experience relating to the operation and effectiveness of leniency policies and examines leniency from the perspectives of corporate and individual applicants, advisers and authorities. The book also explores debates surrounding the intersections between leniency and other crucial elements of the enforcement system such as compensation, compliance and criminalisation. The rich critical analysis in the book draws on the disciplines of law, regulation, economics and criminology. It makes a substantial and distinctive contribution to the literature on a topic that is highly significant to a wide range of actors in the field of competition law and business regulation generally. From the Foreword by Professor Frédéric Jenny ' ... fundamental questions are raised and thoroughly discussed in this book which is undoubtedly the most comprehensive scholarly work on leniency policies produced so far ... [the] book should be required reading for all seeking to acquire a deeper insight into the issues related to leniency policy. It is a priceless contribution ... '

**Market Citizenship** Amanda Root, 2007-07-21 Citizens are caught in a paradox. Voting levels are falling, there are growing feelings of powerlessness, social unfairness and yet citizens are constantly told that they have more choice as well as greater freedom and liberty. This book brilliantly explains these discrepancies. It shows that the new definitions of freedom as responsibility to create prosperity through markets is seriously distorting citizenship whilst appearing to be unbiased and neutral. It exposes inconsistencies in the market-based and apolitical vision of our collective future. This book: outlines how market citizenship involves a new kind of rationality in which citizens are defined as individualized utility maximizers shows how the idea that citizens act primarily to develop their narrow self-interest has encouraged the creation of competitive governance mechanisms analyses how market mechanisms are used to decide who are 'winners' and 'losers' - from the loss of youth groups funding to global treaties discuss the shortfalls when key contemporary issues are tackled through 'win-win' solutions with business working alongside consumers, with little or no role for government explains how localism and the devolution of power is being used to support the status quo. suggests new kinds of engagement are emerging because markets have undermined politics. Essential reading for students, policy-makers and researchers of citizenship within sociology, politics, economics, geography and social policy.
