Vessel Health and Preservation: The Right Approach for Vascular Access Nancy L. Moureau, 2019-06-10 This Open access book offers updated and revised information on vessel health and preservation (VHP), a model concept first published in poster form in 2008 and in JVA in 2012, which has received a great deal of attention, especially in the US, UK and Australia. The book presents a model and a new way of thinking applied to vascular access and administration of intravenous treatment, and shows how establishing and maintaining a route of access to the bloodstream is essential for patients in acute care today. Until now, little thought has been given to an intentional process to guide selection, insertion and management of vascular access devices (VADs) and by default actions are based on crisis management when a quickly selected VAD fails. The book details how VHP establishes a framework or pathway model for each step of the patient experience, intentionally guiding, improving and eliminating risk when possible. The evidence points to the fact that reducing fragmentation, establishing a pathway, and teaching the process to all stakeholders reduces complications with intravenous therapy, improves efficiency and diminishes cost. As such this book appeals to bedside nurses, physicians and other health professionals.

Clinical Placement Manual For Enrolled Nurses Catherine Joustra, Ali Moloney, 2018-12-01 Clinical Placement for the Diploma of Nursing is an exciting new resource that facilitates easier delivery of learning for HLT54115. A practical manual, it incorporates both knowledge evidence and performance evidence supported by learning material. Written to the training package, all learning objectives and clinical skills are covered, and activities, assessments and materials you need are provided for each unit. Educators and clinical facilitators now have transparency for mapping, course delivery and streamlined placement. Textbook layout suits course progression and clinical placement blocks as the order of coverage follows block delivery. Opening vignettes and real-life case studies and tips from nurses and students in clinical settings gives context to the theory, and assist the student before placement to identify key knowledge elements, which are applied to a practical setting. Cross referencing is included, and Clinical Placement for Diploma of Nursing can be value-packed with Tollefson's Essential Clinical Skills and Clarke/Gray's Foundations of Nursing to create a complete reference package for trainees.

HADI PRACTICAL NEONATOLOGY BOOK 2 DR. ABDELHADI ABDELGABBAR ABDELHADI MBBS, MRCP, FRCPC, 2024-01-24 Hadi Practical Neonatology (Hadi PN), a 2-book series of practical guidelines, is intended to provide a structured approach to the management of neonatal conditions which are likely to face the neonatal team. It is not intended to replace neonatal textbooks or to teach the beginners in the field. Prior sound knowledge of Neonatal Medicine, by the user, is essential. This book is the second in the series. It covers aspects of NEUROLOGY-FLUIDS & ELECTROLYTES, VASCULAR ACCESS & SAMPLING, FREQUENT CHALLENGES, HAEMATOLOGY, JAUNDICE and ESSENTIAL PROCEDURES & PRACTICES challenges. It is my belief that neonatal doctors and nurses are an integrated team, and any demarcation is an imaginary line. The recipe of creating a backbone of good nurses is passionate support, continuous education, and practical teaching at every possible opportunity. Mutual trust and appropriate delegations are crucial to the success of the team. HADI PN series is written for the neonatal team and not just for the medical staff. The best way for consolidating the team knowledge and experience is bedside teaching. New methods and approaches of neonatal management are progressing but seem to slow down over the last 2-3 years. This may reflect the fact neonatal advances are approaching our era peak of "what is possible." Nevertheless, many of our current practices are yet to be scrutinized to fulfil the evidence-based pathways and standards. There is no robust verification of our current practice of many routine day to day applications. This includes but is not limited to fluid requirements, duration of antibiotics courses, use of various blood products, and seizures pharmacological treatment. I have reviewed multiple neonatal medical and nursing guidelines from

Europe, North America, and Australia as well as guidelines from Asia, South America, and Africa. I integrated many aspects from these guidelines within this text whenever they are in accord with the international acceptable practices. Feedback and suggestions are welcome and can be sent to neonatologypractical@gmail.com The book is an updated version of the protocols and guidelines which I have developed during my work as Consultant Neonatologist. Many are adopted from various reputable institutes and modified to reflect the current evidence plus a slight flavour of my experience. Considerable effort has been exercised to ensure the doses of medications given in HADI PN are accurate. However, further confirmation by the nursing and medical staff is advised prior to the first use of each medication. HADI PN reflects the author's own acceptable and safe practice and advice. It is written with the intention of facilitating the delivery of care to the most vulnerable newborn. The publication is written bearing in mind the wide variations in the skill mix of neonatal practitioners, nurses, and doctors. Likewise, the challenging circumstances in developing countries are taken into consideration. It is a legal requirement to advise users of the information provided within this publication that the editor and publisher are not responsible for any errors or omissions and or any consequences arising from the use of this book.

Vessel Health and Preservation: The Right Approach for Vascular Access Nancy L. Moureau, 2024-12-28 This second edition offers updated and revised information on vessel health and preservation (VHP). It presents a model of care and systematic application of vascular access and administration of intravenous treatment to show how establishing and maintaining a route to the bloodstream with optimal methods is essential for patients in acute care today. This model concept was first published in poster form in 2008 and in JVA in 2012, which has received a great deal of attention, especially in the US, UK and Australia. Until now, little thought has been given to an intentional process to guide selection, insertion and management of vascular access devices (VADs) and by default actions are based on crisis management when a quickly selected VAD fails. The book details how VHP establishes a framework or pathway model for each step of the patient experience, intentionally guiding, improving and eliminating risk when possible. The evidence points to the fact that reducing fragmentation, establishing a pathway, and teaching the process to all stakeholders reduces complications with intravenous therapy, improves efficiency and diminishes cost. As such this book has become a strong point of reference appealing to vascular access specialists, bedside nurses, physicians and other health professionals. Few authoritative guides provide the depth and descriptive evidence included in this VHP model of care, suitable for hospital administrators, directors, educators and others to apply within their services.
