Thor Hogan

Hydrocarbon Nation Thor Hogan, 2018-05-15 Understanding the complex history of US fossil fuel use can help us build a sustainable future. In *Hydrocarbon Nation*, Thor Hogan looks at how four technological revolutions—industrial, agricultural, transportation, and electrification—drew upon the enormous hydrocarbon wealth of the United States, transforming the young country into a nation with unparalleled economic and military potential. Each of these advances engendered new government policies aimed at strengthening national and economic security. The result was unprecedented energy security and the creation of a nation nearly impervious to outside threats. However, when this position weakened in the decades after the peaking of domestic conventional oil supplies in 1970, the American political and economic systems were severely debilitated. At the same time, climate change was becoming a major concern. Fossil fuels created the modern world, yet burning them created a climate crisis. Hogan argues that everyday Americans and policymakers alike must embrace the complexity of this contradiction in order to help society chart a path forward. Doing so, Hogan explains, will allow us to launch a critically important sustainability revolution capable of providing energy and climate security in the future. *Hydrocarbon Nation* provides reasons to believe that we can succeed in expanding on the benefits of the Hydrocarbon Age in order to build a sustainable future.

Buying Electricity and Gas in the Competitive Marketplace Andrew Robert Buckley, 1998 Buying Electricity and Gas in the Competitive Marketplace points the way through the energy maze for buyers and others responsible for utilities management. It explains the jargon and addresses the issues that need to be faced before arriving at the purchasing decision, including: how the wholesale markets work and how best the customer can respond to the price signals they send, how delivery costs are calculated and how penalty charges can be avoided, the steps to be taken to find the best offers, the contract arrangements that need to be entered into, and how the contracts should be managed to help keep consumption to the minimum.

Thinking Critically Bradley Steffens, 2019 Fossil fuels make up 85 percent of total global energy consumption, but their share of US energy consumption is the lowest it has been since 1902, primarily because of concerns about climate change and pollution. Through a narrative-driven pro/con format--supported by relevant facts, quotes, anecdotes, and full-color illustrations--this title examines issues related to fossil fuels. Topics include: Should the World Stop Using Fossil Fuels? Is Fracking a Good Way of Producing Fossil Fuels? Do Fossil Fuels Threaten the Environment? Are Fossil Fuels Economical?

Energy Alternatives Andrea C. Nakaya, 2008 While most consumable energy is derived from fossil fuels, the utilization of alternative energy sources has been scrutinized and hotly debated in recent years. Through objective overviews, primary sources, and full-color illustrations this title examines Are Alternative Energy Sources Necessary? What Alternative Energy Sources Should Be Pursued? Can Alternative Energy Be Used for Transportation? How Will Increased of Energy Alternatives Impact Society?
