Verb Classes and Aspect Elisa Barraji3n L3pez,Jos3 Luis Cifuentes Honrubia,Susana Rodr3guez Rosique,2015-11-15 This volume offers a variety of perspectives on two of the main topics situated at the crossroads between lexical semantics and syntax, namely: (a) aspect and its correspondence with syntactic structure; and (b) the delimitation of syntactic structures from verb classes. Almost from Aristotle's *Metaphysics*, it has been assumed that verbs invoke a mental image about the way in which eventualities are distributed over time. When it comes to determining time schemata, the lexical class to which the verb belongs represents a first step. Speaking about verb classes does not exclusively mean a semantic similarity; rather, verb classes exhibit a bundle of common features and thus show a set of recursive behavior patterns. Beyond the meaning of the verb, both semantic and syntactic factors, together with pragmatic ones, play a decisive role when establishing the aspectual classification of an eventuality. The contributions collected in this book approach the aforementioned lines, either analyzing the relationships between aspect and syntactic structure or traversing the path from a verb class to its syntactic manifestation. Some of them stress diachronic filiations, while others include processes of word formation in the debate; some of them focus on certain classes, such as movement verbs or psychological verbs, while others examine specific

constructions. A number of chapters also discuss relevant theoretical issues concerning the analysis of aspect. In sum, the kaleidoscopic view provided by this book allows the reader to delve deeper into one of the most controversial – as well as exciting – topics within current linguistics.

Latin American Viticulture Adaptation to Climate Change Gastón Gutiérrez Gamboa, Mercedes Fourment, 2024-03-19

Latin American viticulture faces a wide range of difficulties that include social, political, economic, and productive aspects. Soil diversity, together with the climates in which the viticulture activity takes place, favours the production of grapes, juices, raisins, musts, wines, and distillates with unique and distinctive characters for the world. In addition, the great genetic diversity that covers autochthonous and minor grapevine varieties, including unknown genotypes, opens a wide range of research opportunities for the adaptation of the viticulture to the negative effects of global warming, favouring sustainability and social equity. This book compiles the research about the new viticultural trends performed in diverse regions from Latin America such as Argentina, Brazil, Bolivia, Chile, Dominican Republic, Haiti and Uruguay, covering different topics in viticulture of global importance. This book addresses the impacts of soil and climatic conditions and viticultural practices on vine physiology, berry quality and wine typicity, including topics related to social sciences and agricultural economics. This will allow to provide a relevant discussion for future guidelines in viticulture under a territorial development perspective.
