**The Philippine Archipelago** Yves Boquet,2017-04-19 This book presents an updated view of the Philippines, focusing on thematic issues rather than a description region by region. Topics include typhoons, population growth, economic difficulties, agrarian reform, migration as an economic strategy, the growth of Manila, the Muslim question in Mindanao, the South China Sea tensions with China and the challenges of risk, vulnerability and sustainable development.

**Informal Services in Asian Cities** Asian Development Bank,2022-08-01 While supporting the livelihoods of most of the developing world's urban poor, the informal sector also deprives them of basic services and social protection. Rendered vulnerable to socioeconomic threats, people in the urban informal sector have suffered disproportionately during the coronavirus disease (COVID-19) pandemic and face a highly uncertain future. Informal Services in Asian Cities explores informality's forms and constraints. It describes the pandemic's effects on the informal sector and how leveraging informal services can enable urban resilience. Drawing on interdisciplinary research, the book illustrates the transformative potential of urban planning and governance that addresses informality. It also details measures that could boost the informal sector's inclusive and sustainable growth potential.

Using empirically rich and grounded analyses of both comparative and single-country case studies, the authors chart new approaches to studying automobility and development in emerging Asia.

**Pathways to Low-Carbon Development for the Philippines** Asian Development Bank,2017 This study assesses how the growth of the Philippines can be made climate friendly through a detailed modeling approach that draws on extensive national stakeholder input. The Philippines currently has a low level of per capita greenhouse gas emissions. However, emission levels are growing at an increasing rate, with 4% annual growth between 2006 and 2012. The country's energy system is becoming more carbon intensive to satisfy escalating energy demand caused by strong economic growth. This study assesses how the Philippines can take a low-carbon pathway by drawing on detailed modeling of the power, residential, and transport sectors. It identifies low-carbon development options that can be deployed at approximately zero net cost to reduce energy sector greenhouse gas emissions by 70% by 2050. With energy use levels still low, the country has an opportunity to follow a low-carbon development trajectory if action is taken soon.
