Estadística para la investigación biomédica Edward N. Armitage, 1997 El objetivo de la obra sigue siendo el mismo que en las ediciones anteriores, exponer las técnicas estadísticas usadas con más frecuencia en la investigación biomédica, describiéndolas de tal modo que sean accesibles para un lector no matemático. Se ha acudido a ejemplos de aplicación biomédica, especialmente a partir de proyectos de investigación, de tal forma que el lector pueda comprender la utilidad futura del estudio estadístico para su profesión. La nueva edición mantiene el orden y la organización de los capítulos de las anteriores, pero presenta novedades importantes de contenido. Expone las técnicas estadísticas usadas con más frecuencia en la investigación biomédica, describiéndolas de tal modo que sean accesibles para un lector no matemático.

El subjuntivo en la historia de la gramática española (1771-1973) Alfonso Zamorano Aguilar, 2005 El subjuntivo en la historia de la gramática española (1771-1973), del Dr. Alfonso Zamorano Aguilar, profesor del Área de Lingüística General de la Universidad de Córdoba, supone una contribución muy valiosa al ámbito de la historiografía de la lingüística y, más específicamente, a la gramaticografía del español. La obra está dividida en seis capítulos y en ella se acomete, en primer término, una revisión y análisis del concepto "subjuntivo" -así como de otras unidades con él relacionadas: "modo verbal", "modalidad lingüística", etc.- en el panorama lingüístico actual (máximo años 20 del siglo XX). En los capítulos restantes se lleva a cabo un minucioso y concienzudo estudio del subjuntivo en la historia de la gramática española desde 1771 hasta 1973, fechas que coinciden, respectivamente, con la primera gramática de la RAE y el último tratado publicado por dicha institución, el Esbozo. Así pues, a partir de un corpus de 64 gramáticas, se aborda el análisis de (a) las estructuras formales (a través de un método estadístico propio, como posible aporte a la metodología de la disciplina) y criterios de definición del "subjuntivo" en el período acotado; (b) el subjuntivo y su relación con el resto de modos del sistema español, deducibles en virtud de los diversos programas teóricos presentes en el corpus; (c) estudio del contraste establecido entre la definición general aportada por cada gramático y los ejemplos empleados para su materialización; (d) el subjuntivo en función del tipo de estructura sintáctica en la que se encuadra; (e) la categoría "tiempo" en el subjuntivo español (1771-1973): concepto y

análisis de las unidades que lo integran.

Estadística aplicada a las ciencias de la salud Joaquín Moncho Vasallo,2014-08-24 Cuidados de Salud Avanzados es una colección de monografías dirigidas a profesionales de la salud y estudiantes de posgrado, máster y doctorado, dentro del ámbito de las ciencias de la salud. Su objetivo es ampliar los conocimientos básicos adquiridos durante el grado, proporcionando contenidos avanzados en cada una de las materias tratadas. Su orientación recoge las cuatro funciones que la Organización Mundial de la Salud otorga a las profesiones sanitarias: asistencial, docente, investigadora y gestora. La creciente aplicación de los métodos estadísticos en todas las disciplinas de las ciencias de la salud, ha dado lugar a la implantación de la estadística en los planes de estudios de numerosas titulaciones de Ciencias de la Salud. En el área comunitaria, para establecer el estado de salud de la comunidad, son indispensables las herramientas que proporciona la estadística como parte fundamental de método científico, pero se requiere de un conocimiento de los procedimientos que permita una utilización adecuada de estos recursos. Los autores de esta monografía, con gran experiencia docente en estudios de pregrado, másteres oficiales, cursos de posgrado y cursos de doctorado, han detectado la necesidad de comenzar conceptos y técnicas estadísticas básicas, que permitieran posteriormente la comprensión y la utilización de técnicas algo más complejas. En este sentido, se ha hecho hincapié en las ideas intuitivas sobre los procedimientos y la interpretación de los resultados. Al analizar el estudio de la monografía, los lectores habrán adquirido las siguientes competencias: - Aplicar los métodos estadísticos como herramienta fundamental en investigación en ciencias de la salud. - Analizar e interpretar los datos estadísticos referidos a estudios poblacionales. - Redactar trabajos científicos en ciencias de la salud. - Desarrollar razonamientos críticos y capacidad para definir y dar respuesta a problemas utilizando la evidencia científica disponible.
