Ways of Learning Alan Pritchard, 2017-09-11 While most teachers are skilled in providing opportunities for the progression of children's learning, it is sometimes without fully understanding the theory behind it. With greater insight into what is currently known about the processes of learning and about individual learners, teachers are better equipped to provide experiences and situations that are more likely to lead to effective acquisition of knowledge, concepts and skills. Ways of Learning has been widely used and now, fully updated, it seeks to provide further insight into the ways in which learning takes place, which teachers can make use of in their planning and teaching, including: ■ an overview of learning ■ behaviourism and the beginning of theory ■ cognitive and constructivist learning ■ multiple intelligences and learning styles ■ difficulties with learning ■ the influence of neuropsychology ■ other theories, philosophies and names ■ relating theory to practice. The fourth edition of this book includes developments in areas covered in the preceding editions, as well as expanding on certain topics to bring about a wider perspective; most notably, a new consideration of learning styles and a new chapter detailing important thinkers and writers from the history of education and their continuing influence along with other theories, ideas and thoughts not included in the rest of the book. The book also reflects changes in government policy and is closely related to new developments in practice. Written for trainee teachers, serving teachers and others interested in learning for various reasons, Ways of Learning serves as a valuable introduction for students setting out on higher degree work who are in need of an introduction to the topic.

Futureproofing Engineering Education for Global Responsibility Michael E. Auer, Tiia Rüttemann, 2025-03-20 This book contains papers in the fields of: Collaborative learning. Digital transition in education. AI and learning analytics in engineering education. Diversity in engineering education. The authors are currently witnessing a significant transformation in the development of education on all levels and especially in post-secondary and higher education. To face these challenges, higher education must find innovative and effective ways to respond in a proper way. Changes have been made in the way we teach and learn, including the massive use of new means of communication, such as videoconferencing and other

technological tools. Moreover, the current explosion of artificial intelligence tools is challenging teaching practices maintained for centuries. Scientifically based statements as well as excellent best practice examples are necessary for effective teaching and learning engineering. The 27th International Conference on Interactive Collaborative Learning (ICL2024) and 53rd Conference of International Society for Engineering Pedagogy (IGIP), which took place in Tallinn, Estonia, between 24 and 27 September 2024, was the perfect place where current trends in higher education were presented and discussed. IGIP conferences have been held since 1972 on research results and best practices in teaching and learning from the point of view of engineering pedagogy science. ICL conferences have been held since 1998 being devoted to new approaches in learning with a focus on collaborative learning in Higher Education. Nowadays, the ICL conferences are a forum of the exchange of relevant trends and research results as well as the presentation of practical experiences in learning and Engineering Pedagogy. In this way, the authors try to bridge the gap between 'pure' scientific research and the everyday work of educators. Interested readership includes policymakers, academics, educators, researchers in pedagogy and learning theory, schoolteachers, learning industry, further and continuing education lecturers, etc.

Human Safety and Risk Management A. Ian Glendon, Eugene F. McKenna, 1995 This book, written by two authors with extensive experience of lecturing on the 'Human Aspects of Safety' on training courses for safety practitioners, considers major psychological and organizational issues within the framework of health and safety at work and the management of risk, extending applied knowledge from psychology and related disciplines in new directions. The book reflects developing approaches to managing risk as it applies to individuals, teams and organizations in the workplace. Specifically it aims to improve understanding of ways in which human behaviour both influences, and can be shaped by, effective management of safety and risk in the workplace. For the safety and risk professional and student alike there are straightforward introductions to, and explorations of, the relevant aspects of behavioural science, supported by numerous examples. For those who wish to read further around the subject, this clear exposition of material is supplemented by references and sources of further reading. The basic appeal of the book lies in the coverage of material and logical progression through the various topics. The emphasis throughout is on the use of applied and theoretical approaches in explaining safety and risk applications. The book is as relevant to a practitioner as it is to a student audience, and contains guidance and advice relevant to practice, enforcement, teaching, training, research, consultancy and support services. Human Safety and Risk Management makes human aspects of safety and risk available to those who do not necessarily have a behavioural science background, including the informed lay reader.

An Experiential Learning Approach to Employee Training Systems Ronald R. Sims, 1990-10-05 A pioneering contribution to the professional training literature, this book is designed to help trainers and human resource managers to more effectively manage training programs. The author develops a unified framework for the training function that combines a systems perspective with the experiential learning approach to training efforts. The result is a step-by-step guide to conducting key phases of any training program: pre-assessment, needs analysis, design, implementation, and evaluation. Sims focuses throughout on the principles of good training program design as well as on training for the development of certain pivotal skills, competency levels, and individual differences. No prior knowledge of training procedures and techniques is required to successfully use the concepts introduced. The author begins by addressing training systems in general and the increasing need for training within the context of global markets and competition. He then discusses how to determine training needs within the individual organization. Subsequent chapters address each phase of the training process in turn. Sims reveals the importance of completing a thorough job analysis before embarking on a training program, shows

how to design training programs to fill specific skill and competency needs, and demonstrates how to establish training objectives and determine program content. The experiential learning model is introduced as a viable system for managing the learning process in training in three major areas: the selection of training methods, trainees, and trainers; the development of certain training environments which are more responsive to trainee and trainer learning styles; and the provision of several psychological contracting activities which can facilitate various phases of a training program. Finally, Sims offers a systems analysis approach to the planning, design, and conduct of training program evaluations that includes a thorough discussion of the training audit and cost-benefit techniques. Both the novice and experienced trainer will find this book a comprehensive yet practical guide to the employee training process.
