**Mario Bunge: A Centenary Festschrift** Michael R. Matthews, 2019-07-17 This volume has 41 chapters written to honor the 100th birthday of Mario Bunge. It celebrates the work of this influential Argentine/Canadian physicist and philosopher. Contributions show the value of Bunge's science-informed philosophy and his systematic approach to philosophical problems. The chapters explore the exceptionally wide spectrum of Bunge's contributions to: metaphysics, methodology and philosophy of science, philosophy of mathematics, philosophy of physics, philosophy of psychology, philosophy of social science, philosophy of biology, philosophy of technology, moral philosophy, social and political philosophy, medical philosophy, and education. The contributors include scholars from 16 countries. Bunge combines ontological realism with epistemological fallibilism. He believes that science provides the best and most warranted knowledge of the natural and social world, and that such knowledge is the only sound basis for moral decision making and social and political reform. Bunge argues for the unity of knowledge. In his eyes, science and philosophy constitute a fruitful and necessary partnership. Readers will discover the wisdom of this approach and will gain insight into the utility of cross-disciplinary scholarship. This anthology will appeal to researchers, students, and teachers in philosophy of science, social science, and liberal education programmes. 1. Introduction Section I. **El Lenguaje como precursor del Aprendizaje Matemático en Educación Infantil y Escolar** Laura Espinoza Pastén, Amparo Ygual Fernández, 2021-05-26 Las autoras ofrecen aportes para la comprensión específica y profunda respecto a las diferentes relaciones entre lenguaje y desarrollo matemático en población de educación preescolar y escolar, estableciendo estas asociaciones tanto a corto como a largo plazo. Todo ello, desde un punto de vista de las Ciencias Cognitivas, desde las cuales se muestran los respectivos aportes empíricos. Asimismo, a lo largo de la revisión de la evidencia, buscan efectuar el establecimiento de relaciones entre los aportes de las investigaciones, confirmar algunos planteamientos e hipotetizar nuevas situaciones a la luz de aquellos estudios que difieren entre sí. / Las investigaciones sobre

la relación entre el desarrollo del lenguaje y los aprendizajes matemáticos permiten comprender de forma más integral el procesamiento matemático. Estos conocimientos permiten enriquecer las intervenciones en niños que presentan dificultades en el aprendizaje de las matemáticas, ayudándonos a entender cómo su nivel de desarrollo del lenguaje puede estar influyendo en dichas dificultades. Y por tanto, nos permite diseñar estrategias de intervención más adecuadas que consideren esta influencia del lenguaje.

**The Diversity and Beauty of Applied Operator Theory** Albrecht Böttcher, Daniel Potts, Peter Stollmann, David Wenzel, 2018-04-27 This book presents 29 invited articles written by participants of the International Workshop on Operator Theory and its Applications held in Chemnitz in 2017. The contributions include both expository essays and original research papers illustrating the diversity and beauty of insights gained by applying operator theory to concrete problems. The topics range from control theory, frame theory, Toeplitz and singular integral operators, Schrödinger, Dirac, and Kortweg-de Vries operators, Fourier integral operator zeta-functions, C\*-algebras and Hilbert C\*-modules to questions from harmonic analysis, Monte Carlo integration, Fibonacci Hamiltonians, and many more. The book offers researchers in operator theory open problems from applications that might stimulate their work and shows those from various applied fields, such as physics, engineering, or numerical mathematics how to use the potential of operator theory to tackle interesting practical problems.

**Entornos virtuales para la educación en tiempos de pandemia: perspectivas metodológicas.** Alba Vico Bosch, Luisa Vega Caro, Olga Buzón García, 2021 El continuo y rápido avance de las Tecnologías de Información y la Comunicación (TIC) ha influido a diferentes niveles (económico, cultural, político,...), y, por tanto, también en el ámbito educativo. De manera natural los procesos de enseñanza y aprendizaje se han ido adaptando a las necesidades que la sociedad plantea, dando respuesta a las mismas para permitir la actualización y formación a lo largo de la vida de las personas. Un ejemplo de ello han sido las numerosas adaptaciones metodológicas que se han venido realizando en educación a raíz de la pandemia de la COVID-19 y la consiguiente declaración del estado de alarma en España. El profesorado ha tenido que formarse y especializarse a gran velocidad para adaptar cada una de las materias al entorno virtual a través de diversas herramientas y plataformas, improvisando en muchas ocasiones distintas estrategias de enseñanza para adecuarse a esta nueva situación. Con ello, han aparecido nuevas metodologías de aprendizaje que han influido tanto en el propio alumnado como en el clima de aula, suponiendo una innovación de los centros educativos.

Descriptive Geometry, The Spread of a Polytechnic Art Évelyne Barbin, Marta Menghini, Klaus Volkert, 2019-07-01 This book seeks to explore the history of descriptive geometry in relation to its circulation in the 19th century, which had been favoured by the transfers of the model of the École Polytechnique to other countries. The book also covers the diffusion of its teaching from higher instruction to technical and secondary teaching. In relation to that, there is analysis of the role of the institution - similar but definitely not identical in the different countries - in the field under consideration. The book contains

chapters focused on different countries, areas, and institutions, written by specialists of the history of the field. Insights on descriptive geometry are provided in the context of the mathematical aspect, the aspect of teaching in particular to non-mathematicians, and the institutions themselves.

Prácticas y reflexiones sobre la educación contemporánea María Luisa Ávalos Latorre, María Úrsula Palos Toscano, Rita Berenice Miranda Álvarez, Cecilia Colunga Rodríguez, María Elena Flores Villavicencio, Guillermo Alfonso Cervantes Cardona, María Guadalupe Vega López, María Ana Valle Barbosa, Ivis Jennifer Meza Flores, Mercedes Gabriela Orozco Solís, Mario Ángel González, Julio César Vázquez Colunga, Claudia Liliana Vázquez Juárez, Maribel Paniagua Villarruel, Alejandro Chávez Rodríguez, Patsy Jaquelin Córdova Ramírez, Israel Alejandro Romero Ramírez, Daniel Briseño Ortiz, Monsserrat Mariscal Cancelada, Xochilt Patricia Martínez López, Berenice Zamora Suchiapa, Silvia Rosa Sigales Ruiz, Martha Xitlali Mercado Rivas, Michèle Caria, Leticia Villarreal Caballero, Francisco Javier Ramírez López, Iván Omar Madrigal Quezada, Ana María Méndez Puga, Olga Nuñez Solorio, Roberto Oropeza Tena, Diego Agustín Ferreyra Murillo, José Carlos Ramírez Cruz, Nicolás Sánchez Acevedo, 2020-04-16 Una serie de trabajos sustentados en la investigación psicológica, la investigación educativa, la reflexión filosófica, psicoanalítica, literaria y otros marcos afines de conocimiento que en sus nexos con lo educativo contribuyen a entenderlo, con el fin de que sean sus posibles lectores quienes se planteen qué es lo que desde dichos ámbitos de estudio se ha conseguido aportar para enriquecer tanto a la comprensión como a la práctica del fenómeno educativo. En tal sentido, el libro que presentamos recopila doce trabajos, algunos de ellos resultado de la investigación empírica y otros más derivados de la reflexión teórica, pero que en su conjunto representan una oportunidad para explorar el ámbito de la educación. No nos resta sino señalar que este libro se suma a muchos otros diseñados para dar la palabra al investigador y al profesor rescatando desde esa palabra un saber pedagógico que es importante y valioso para construir un mayor conocimiento del campo educativo y en aquellos campos con los que la educación hace frontera.

La observación de aula Mariana Morales Lobo, 2023-09-28 ¿De qué mejor manera se puede reflexionar sobre la propia práctica docente que observándola y comentándola con un igual o un experto? Esto permite, además, generar un espacio de reflexión para compartir y produce transferencia de unas aulas a otras. La evaluación docente no ha de ser una evaluación a los docentes, sino con los docentes. La probabilidad de que un docente aplique pedagogías innovadoras se incrementa cuando observa otras aulas, otros centros y participa en redes de colaboración de profesionales. Esta obra supone un acercamiento práctico a la observación de clases, especialmente a la observación entre iguales, y el tipo de decisiones que se toman, desde la mentalidad de crecimiento y con el objetivo de alcanzar retos de mejora educativa para el alumnado.

**Real and Complex Singularities** Victor Goryunov, Kevin Houston, Roberta Wik-Atique, 2012 This volume is a collection of papers presented at the 11th International Workshop on Real and Complex Singularities, held July 26-30, 2010, in Sao Carlos, Brazil, in honor of David Mond's 60th birthday. This volume reflects the high level of the conference discussing the

most recent results and applications of singularity theory. Articles in the first part cover pure singularity theory: invariants, classification theory, and Milnor fibres. Articles in the second part cover singularities in topology and differential geometry, as well as algebraic geometry and bifurcation theory: Artin-Greenberg function of a plane curve singularity, metric theory of singularities, symplectic singularities, cobordisms of fold maps, Goursat distributions, sections of analytic varieties, Vassiliev invariants, projections of hypersurfaces, and linearity of the Jacobian ideal.--P. Developing Mathematical Literacy in the Context of the Fourth Industrial Revolution Espinosa, Edgar Oliver Cardoso, 2021-03-12 In the context of the Fourth Industrial Revolution, a world of continuous alterations is glimpsed where science and technology are at the base of economic competitiveness and where innovation plays a strategic role in global competition, so that they are forced to cover a series of requirements to compete successfully in an increasingly globalized economy, including high investments in both education and research. Along these lines, the formation of mathematical learning is important because it is oriented towards the development of a set of skills with the aim of resolving situations of daily and professional lives. It focuses on the acquisition of employing the different ways of representing information in the form of models, constructions, and graphs to determine the best decision making. In this sense, it includes the mastery of the handling of numbers, measures, and structures to carry out the interpretation of operations and representations of a quantitative nature on personal and professional situations. For a society to favor innovation, the use of mathematical information is an essential condition that allows the development of creativity and analysis of information. Mathematics education plays a vital role in this development. Developing Mathematical Literacy in the Context of the Fourth Industrial Revolution studies the formation of mathematical abilities in the context of the Fourth Industrial Revolution regarding its development of both teaching and learning strategies, as well as the use of ICT and its use in the development of this discipline in students. It is important that teachers of any educational level reorient their teaching strategies and their role as educators. Therefore, the chapters discuss up-to-date and relevant information on teaching and didactic tasks in the subject of mathematics. This book highlights mathematical pedagogies, ICT in mathematics learning, teacher training, and classroom strategies for mathematics. It is intended for teachers, pedagogical advisors, business trainers, higher education staff, administrators, teacher educators, practitioners, stakeholders, researchers, academicians, and students interested in mathematical literacy in the fourth industrial revolution.

The Important Role of the Early School Years for Reading, Writing and Math Development: Assessment and Intervention at School Entry Christoph Weber, Martin Schöfl, Susanne Seifert, Natalie Förster, 2025-12-01 School entry is a critical life event for young children. Students begin this new phase of their lives with very different abilities due to their individual characteristics, previous experiences, and education. While some children hardly know any letters or numbers, others can already read, write and calculate quite fluently. To optimally support young learners according to their respective starting conditions, teachers must recognize students learning prerequisites and adapt instruction to students' needs. To this end, both valid and economical assessments as well as effective and differentiated interventions are needed. This Research Topic addresses new developments in early assessments and assessment-based interventions around the time of school entry from the last year before enrollment until second grade. In particular, this Research Topic aims to bring together research that directly contributes to assessing children's difficulties and providing evidence-based support. We highly welcome new, innovative approaches from the fields of education, didactics, and psychology that focus on the assessment and assessment-based instruction in reading, writing, and maths. Any empirical studies that help to improve the assessment and assessment-based interventions for the competencies mentioned are welcome. We are looking for empirical quantitative or qualitative studies dealing with the target group of children around the age of school entry (last year of kindergarten to second grade elementary school) that include at least one of the following topics: - the presentation or testing of new assessment procedures that focus on performance in and prerequisites for reading, writing and maths; - assessment-based interventions (both whole-class or individual approaches) in reading, writing and maths; - the co-development of (sub)skills in reading, writing, and maths and consequences for assessment and intervention (Please note that manuscripts without prior submission of an abstract will not be considered for the research topic)
