The Mind's Eye Jeffrey F. Hamburger, Anne-Marie Bouché, 2006 The Mind's Eye focuses on the relationships among art, theology, exegesis, and literature--issues long central to the study of medieval art, yet ripe for reconsideration. Essays by leading scholars from many fields examine the illustration of theological commentaries, the use of images to expound or disseminate doctrine, the role of images within theological discourse, the development of doctrine in response to images, and the place of vision and the visual in theological thought. At issue are the ways in which theologians responded to the images that we call art and in which images entered into dialogue with theological discourse. In what ways could medieval art be construed as argumentative in structure as well as in function? Are any of the modes of representation in medieval art analogous to those found in texts? In what ways did images function as vehicles, not merely vessels, of meaning and signification? To what extent can exegesis and other genres of theological discourse shed light on the form, as well as the content and function, of medieval images? These are only some of the challenging questions posed by this unprecedented and interdisciplinary collection, which provides a historical framework within which to reconsider the relationship between seeing and thinking, perception and the imagination in the Middle Ages.

Medieval Allegory as Epistemology Marco Nievergelt, 2023 This volume shows how late medieval dream-poetry explored problems arising from the reception of Aristotle's philosophical work concerning human knowledge. Marco Nievergelt explores how the work of three medieval poets in the genre of allegorical fiction addressed these problems in distinctive, non-academic terms.

Plant Biology Alison M. Smith, George Coupland, Liam Dolan, Nicholas Harberd, Jonathan Jones, Cathie Martin, Robert Sablowski, Abigail Amey, 2009-04-30 Plant Biology is a new textbook written for upper-level undergraduate and graduate students. It is an account of modern plant science, reflecting recent advances in genetics and genomics and the excitement they have created. The book begins with a review of what is known about the origins of modern-day plants. Next, the special features of plant genomes and genetics are explored. Subsequent chapters provide information on our current understanding of plant cell biology, plant metabolism, and plant developmental biology, with the remaining three chapters outlining the interactions of plants with their environments. The final chapter discusses the relationship of plants with humans: domestication, agriculture and crop breeding. Plant Biology contains over 1,000 full color illustrations, and each chapter begins with Learning Objectives and concludes with a Summary.
