**Readings in Database Systems** Joseph M. Hellerstein,Michael Stonebraker,2005 The latest edition of a popular text and reference on database research, with substantial new material and revision; covers classical literature and recent hot topics. Lessons from database research have been applied in academic fields ranging from bioinformatics to next-generation Internet architecture and in industrial uses including Web-based e-commerce and search engines. The core ideas in the field have become increasingly influential. This text provides both students and professionals with a grounding in database research and a technical context for understanding recent innovations in the field. The readings included treat the most

important issues in the database area--the basic material for any DBMS professional. This fourth edition has been substantially updated and revised, with 21 of the 48 papers new to the edition, four of them published for the first time. Many of the sections have been newly organized, and each section includes a new or substantially revised introduction that discusses the context, motivation, and controversies in a particular area, placing it in the broader perspective of database research. Two introductory articles, never before published, provide an organized, current introduction to basic knowledge of the field; one discusses the history of data models and query languages and the other offers an architectural overview of a database system. The remaining articles range from the classical literature on database research to treatments of current hot topics, including a paper on search engine architecture and a paper on application servers, both written expressly for this edition. The result is a collection of papers that are seminal and also accessible to a reader who has a basic familiarity with database systems.

Digitising History Sean Townsend, Cressida Chappell, Oscar Struijvé, 1999 The Arts and Humanities Data Service (AHDS), funded by the UK government, has produced this series of Guides to Good Practice to provide the arts and humanities research and teaching communities with practical instruction in applying recognized standards and good practice to the creation, preservation and use of digital resources. Some of the Guides focus on methods and applications relevant to arts and humanities disciplines such as archaeology, history, linguistics, text studies and performing arts. Others address those areas which cross-disciplinary boundaries. All Guides identify and explore key issues and provide comprehensive pointers for those who need more specific information. As such they are essential reference material for anyone interested in computer-assisted research and teaching in the arts and humanities.

An Introduction to Database Systems C. J. Date, 2000-01 This book provides a solid grounding in the foundations of database technology and gives some ideas of how the field is likely to develop in the future. Emphasizing insight and understanding rather than formalisms, Chris Date has divided the book into six parts: Basic Concepts, The Relational Model, Database Design, Transaction Management, Further Topics, and Object and Object/Relational Databases. This comprehensive introduction to databases reflects the latest developments and advances in the field of database systems. Throughout the book, there are numerous worked examples and exercises for the reader--with answers--as well as an extensive set of annotated references.
