Autism One Grandparents Roadmap Geoffrey Robinson, It is hard to over emphasize the value of early intervention for children on the spectrum. Although written in a grandparent's voice, the book provides directions for parents and care givers who want to support the child. The child's future cannot wait for an official diagnosis. Our diagnosis did not arrive until over a year after we had begun early intervention. I believe you should start as soon as you begin having concerns about what you are experiencing with the child. If the child is not on the spectrum, you have still begun good practices to support the child. The book is a compilation of live links and articles to get you started on your journey. For the child's sake, you cannot afford to be behind on knowledge. Early intervention. When it came to learning and understanding what autism is and is not, and how to appropriately support our child; we had to dig out every word on our own. Where do we go? Where do I find this?

How do I do that? What does stimming mean? After six years with a lovely grandson on the spectrum, I decided families needed an early intervention a roadmap. With luck, someone smarter than me will write a better one. The links embedded in the book are live so you can go directly to the resources or articles I have cited. I am not a therapist or clinician, but I have spent years accumulating information to help my grandson. Information I wish I had had the day he was diagnosed.

**Chronic Myeloid Leukemia: From Targeted Therapy to Treatment-Free Remission** Michele Massimino, Simona Soverini, Manuela Mancini, Stefania Stella, 2025-10-16 Chronic Myeloid Leukemia (CML) is a hematopoietic stem cell disorder driven by the BCR-ABL1 oncogene which encodes for a non-receptor tyrosine kinase with constitutive deregulated kinase activity causing clonal expansion of leukemic stem cells. To date, the first line treatment for CML patients concerns the use of anti-ABL1 kinase drugs, known as Tyrosine Kinase Inhibitors (TKIs). A crucial aspect regarding CML and disease progression concerns the TKIs insensitivity properties of LSCs. In fact, although TKIs arrest the proliferation of committed Ph+ cells, they are ineffective to induce apoptosis of LSCs that preserving their self-renewal properties representing a reservoir of the disease. This event causes disease relapse promoting the proliferation of a more aggressive and TKIs resistant leukemic clone. The therapeutic landscape for CML now includes several approved ABL-directed inhibitors, known as Tyrosine Kinase Inhibitors, and most patients with optimal response have a normal life expectancy. Although studies on CML generated crucial progresses to understand cell biology, patients management and molecular disease monitoring, several critical issues are still under investigation, including: detection of minimal residual disease employing techniques such next generation sequencing (NGS), digital PCR (dPCR) or more innovative methods, eradication of leukemic stem cells (LSCs), new therapeutic approaches and the possibility to attempt TKIs discontinuation achieving treatment-free remission

(TFR). In this Research Topic several aspects concerning new perspectives on CML prognosis will be covered. The Topic will also invite submissions on: - CML therapy - LSCs - resistance mechanisms - molecular monitoring - TKIs discontinuation
