Doctors as Patients Petre Jones,2022-03-01 Doctors, as strong, clever, resourceful professionals, are heir to human frailty and illness, like anyone else. This book is about diagnosable, label-able mental illness such as eating disorders, affective disorders and, sometimes, psychosis. More than that, it is a book about doctors, many fully-functioning, practising doctors, who suffer from these illnesses, and the unique insights and problems that arise when the doctor is the patient, especially when questions of insight and judgement are blurred.

Intelligence - Theories and Applications Rainer M. Holm-Hadulla,Joachim Funke,Michael Wink,2022-06-29 Intelligence allows people to understand events and to shape their surrounding environment. This book delves deeper into the theories and applications of intelligence, showing it is a multifaceted concept —defined and explained differently by prestigious experts of various disciplines in their own research. The book provides interdisciplinary connections of intelligence as it relates to a variety of clearly outlined subject areas, and should lead to a deep understanding of the phenomenon as it

pertains to practical applications in different domains. Contributors in this volume present results from evolutionary biology, mathematics, artificial intelligence, medicine, psychology, cultural studies, economy, political sciences and philosophy. Individual scientific models are integrated in an interdisciplinary concept of wisdom. This volume will help enhance the common understanding of intelligence for fellow researchers and scientists alike.

Science's War On Reason Mike Hockney, 2016-01-02 People can't reason. They don't even know what reason is. Reason is almost always harnessed to something that has nothing to do with reason. Believers in mainstream religion are feeling types who reason with their emotions, or with their mystical intuitions. Scientists are sensing types. They subordinate their reason to their senses. All scientists are empiricists and are opposed to rationalism, i.e. the existence of a rational order of reality completely removed from the human senses, which can only be apprehended rationally, logically, mathematically and via intellectual intuition. Scientists try to don the cloak of rationalism, even though they are explicitly opposed to mathematical rationalism, which addresses a more fundamental, noumenal reality than the one amenable to phenomenal science.

Giving Voice to Values-based Leadership Gry Espedal, Frank Elter, 2023-12-06 The complexity facing today's organizations calls for a rethinking of leadership. The world is facing grand challenges for people and the planet. Leaders and employees bear the responsibility of formulating strategies grounded in strong values. These strategies aim to foster the growth of sustainable organizations and promote ethical work practices. This book gives voice to values-based leadership and provides a method for leaders to develop a values-based organizational culture. Values play a role on many levels in how we work as individual leaders, in teams, and in organizations and in how organizations approach societal challenges. Values can be a compass or orientation point, giving direction for decisions and actions. Awareness of values can make organizational responsibilities clearer and give a sense of meaning to work and help leaders to create organizations where corporate, moral, and social values are embedded at every level. This book gives insight into a Scandinavian values-based leadership model built on the institutional leadership tradition. It provides processes and practices that leaders can use to develop organizations where values are continuously nurtured. The book provides practical ideas of how leaders can work on becoming conscious of both the organization's explicit and implicit values, as well as working on the direction of the organization and its broader organizational culture. This book will be an invaluable resource for both practitioners and graduate students interested in leadership and organizational development.

Dancing with Wolves while Feeding the Sheep Ray S. Anderson, 2002-03-20 THE RAY S. ANDERSON COLLECTION by WIPF & STOCK PUBLISHERS Ray Sherman Anderson (1925-2009) worked the soil and tended the animals of a South Dakota farm, planted and pastored a church in Southern California, and completed a PhD degree in theology with Thomas F.

Torrance in New College Edinburgh. He began his professional teaching career at Westmont College, and then taught and served in various administrative capacities at Fuller Theological Seminary for thirty-three years (retiring as Professor Emeritus of Theology and Ministry). While teaching at Fuller, he served as a parish pastor, always insisting that theology and ministry go hand-in-hand. The pastoral theologian who began his teaching career in middle age penned twenty-seven books. Like Karl Barth, Prof. Anderson articulated a theology of and for the church based on God's own ministry of revelation and reconciliation in the world. As professor and pastor, he modeled an incarnational, evangelical passion for the healing of humanity by Jesus Christ, who is both God's self-revelation to us and the reconciliation of our broken humanity to the triune God. His gift of relating suffering and alienated humans to Christ existing as community (Dietrich Bonhoeffer) is a recurrent motif throughout his life, ministry, and works. The Ray S. Anderson Collection comprises books by Ray Anderson, an introductory text to his theology by Christian D. Kettler, two edited volumes that celebrate his distinguished academic career (◆◆ncarnational ◆◆ministr◆◆ The Presence of Christ in Church, Society, and Family and On Being Christian . . . and Human), and a reprint of an E◆◆ification volume that focuses on Ray Anderson's contributions to the field of Christian Psychology. A word of gratitude is due to The Society of Christian Psychology and its parent organization, The American Association for Christian Counselors, for their permission to make the E◆◆ification issue available in book form. Jim Tedrick of Wipf and Stock Publishers deserves a special word of thanks for publishing many of Ray Anderson's books and commissioning this collection of works to continue his legacy. Todd H. Speidell, General Editor

The Politicizing Presidency Thomas J. Weko, 1995 From Truman to Clinton presidents have aggressively tried to expand their control over national government. In the process, they have vastly enlarged their White House staffs and politicized the federal bureaucracy with thousands of appointees in key administrative positions. Thomas Weko argues that the Presidential Personnel Office (PPO), charged with screening and recommending such appointees, both exemplifies and helps explain the enormous growth of presidential power since World War II. Originally conceived as a small advisory group within the White House Office, the PPO has grown enormously from a staff of two under Truman to as many as sixty under other presidents and now oversees nearly four thousand appointments per administration. Weko charts the PPO's evolution and influence and shows how central it is to our understanding of modern presidential leadership. Weko's starting point is Terry Moe's rational choice theory that it is the institution of the presidency, not the sitting president, that fosters centralization and politicization within the executive branch. Amplifying and extending Moe's theory, Weko persuasively links the PPO's explosive growth to the weakening of political parties, the post-Eisenhower disintegration of policy networks, the growing impact of television news, and the public's increasing readiness to hold the President accountable for policy failures. The PPO's growth clearly has increased presidential control and bureaucratic responsiveness. But Weko argues those results have had unanticipated and unwanted consequences that, among other things, have undermined the integrity and capabilities of administrative

agencies. Any improvement in the leadership of the executive branch, he contends, can only emerge from changes in the current institutional arrangement of the presidency itself. Based on exhaustive research in White House files, oral histories, and memoirs, and personal interviews with over 100 White House aides, Weko's study provides a provocative new look at the White House Office and the modern presidency.

Decision Making in Complex Systems Marina V. Sokolova, Antonio Fernández Caballero, 2012-01-13 The study of complex systems attracts the attention of many researchers in diverse fields. Complex systems are characterized by a high number of entities and a high degree of interactions. One of the most important features is that they do not involve a central organizing authority, but the various elements that make up the systems are self-organized. Moreover, some complex systems possess an emergency priority: climate change and sustainable development research, studies of public health, ecosystem habitats, epidemiology, and medicine, among others. Unfortunately, a great number of today's overlapping approaches fail to meet the needs of decision makers when managing complex domains. Indeed, the design of complex systems often requires the integration of a number of artificial intelligence tools and techniques. The problem can be viewed in terms of goals, states, and actions, choosing the best action to move the system toward its desired state or behavior. This is why agent-based approaches are used to model complex systems. The main objective of this book is to bring together existing methods for decision support systems creation within a coherent agent-based framework and to provide an interdisciplinary and flexible methodology for modeling complex and systemic domains.

Dismantle Shlomo Maital, 2018-12-30 Striving hard to think of a creative idea? Finding ideas that can't stand the first round of validation? Stuck with implementation of your idea? If yes, you need to 'dismantle'. In real life, human brains are wired to think in straight lines, suppressing their creative instincts from their childhood. There's no school that will encourage dismantling or deconstructing their linear thinking. As a result, we are producing economists who cannot predict a financial crisis, doctors who lack clinical empathy, managers who lack people skills and CEOs who can't look beyond the balance sheet. To generate one idea, you need creative thinking. To generate many fresh ideas, you need a new system for creative thinking. Dismantle breaks your conventional thinking, deconstructs your mind and helps build your personal creativity machine.

Learning and Complex Behavior John W. Donahoe, David C. Palmer, 1994 Written from the perspective of selectionist theory, this text presents a theoretically integrated approach to the study of animal learning and human cognition that coordinates behavioural research and research in neuroscience. It covers traditional topics such as acquisition and extinction of behaviour, stimulus control and schedules of reinforcement, and also deals with topics of student interest such as perception, memory, problem solving and verbal behaviour. All of these topics are discussed in terms of principles established by experimental analysis at the behavioural and neural levels, and scientific interpretation based on those principles.
