Carpal Tunnel Syndrome Riccardo Luchetti, Peter Amadio, 2008-01-01 Covers all aspects of CTS: diagnosis - management - outcome assessment Abundantly illustrated

Sensitivity and Specificity of Tinel's, Phalen's and the Hand Diagram in Electrodiagnostically Confirmed Carpal Tunnel Syndrome Eric D. James, 2010 Objective: To determine the individual and combined specificities and sensitivities of Tinel's and Phalen's tests and a Hand Symptom Diagram relative to the widely accepted Criterion Standard Nerve Conduction Studies (NCS) testing for Carpal Tunnel Syndrome (CTS). Design: Correlation study with blind comparison of three clinical examination findings to a Criterion Standard. Setting: Single center, out-patient orthopedic electrodiagnostic laboratory in eastern North Carolina, with patients referred from primary care physicians, orthopedic and specialty physicians. Participants: One hundred three patients, referred for electrodiagnostic examination for any of the following referral diagnoses; CTS, hand numbness or weakness, or arm pain, numbness or weakness. Interventions: Not applicable. Main Outcome Measures: Sensitivity, specificity. Results: Sensitivities and specificities were calculated for the following seven combinations of clinical tests vs. NCS: Hand Diagram/Tinel's/Phalen's, Hand Diagram/Tinel's, Hand Diagram/Phalen's, Tinel's/Phalen's, Hand Diagram alone, Tinel's alone, and Phalen's alone. The range of sensitivities and specificities was from .26 to .62, and from .42 to .88 respectively. When compared with NCS, the most sensitive tests were the Hand Diagram and the Phalen's test alone. The combination of the Hand Diagram/Phalen's/Tinel's and the combination of the Hand Diagram with Tinel's test were found to have the highest agreement. No individual clinical test or combination of clinical tests provided specificity and sensitivity equivalent to NCS confirmed CTS. Conclusions: No single clinical examination or combination of clinical examinations is found to be both as specific and as sensitive as electrodiagnostically confirmed CTS. The combination of Tinel's, Phalen's and a Hand Diagram was found to be highly specific, but not as sensitive in diagnosing CTS. Both sensitivity and specificity results diminish as individual's age and provide minimal value for patients over 69 years old. Therefore, electrodiagnostic testing is the recommended procedure for the diagnosis and management of suspected CTS.

It is packed with good and up-to-date information, and I think it will be an invaluable resource for trainees but also for all plastic surgeons. The editors are to be congratulated on achieving a very difficult task with such success. —from a review by Peter C. Neligan, MB, in Plastic and Reconstructive Surgery This is exactly what the editors of Plastic and reconstructive surgery: Approaches and Techniques set out to achieve in producing this excellent textbook. . . . It is truly an international effort at all levels, as the editors, from Australia (Ross D. Farhadieh), the UK (Neil W. Bulstrode) and Canada (Sabrina Cugno), have joined forces to recruit over 130 international contributors and produce a resource of over 1100 pages that provides a well-organized and thorough, yet succinct, text of the essentials of current plastic surgery. . . . Many of the contributors are world-renowned experts; however, there is also a new generation of young rising stars whose contributions are equally good, providing a new, fresh and contemporary feel. —from the Foreword by Julian J. Pribaz, Professor of Surgery, Harvard Medical School The authors here have concentrated all this useful information into their chapters in a quite outstanding manner. Any plastic surgeon of whatever maturity will find this an excellent purchase which he/she will have no reason to regret. —from a review by Douglas H. Harrison in Journal of Plastic, Reconstructive & Aesthetic Surgery

Helping Hands Caroline Rodgers, Richard Harrington, 2019-10-18 This brand-new textbook introduces medical students, junior doctors, medical educators and allied health professionals to the vital skills of diagnostic strategy and clinical reasoning, both essential components of becoming an effective clinician. Taking the examination of the hands as a springboard – often the initial step in physical examination and from which a wealth of information can be gleaned – through real-life clinical cases readers are encouraged to refine their powers of observation and decision-making strategy. Key features: • Encourages a conscious approach to clinical reasoning – ‘see’ rather than just ‘look’ • Develops an understanding of why all clinicians can be responsible for diagnostic mistakes and how, with a raised awareness, they can work towards avoiding error • Outlines approaches that can be used when taking a history and when examining patients in any clinical setting • Bundled e-book for use ‘on the go’ while the companion website provides additional materials for students and lecturers including self-assessment questions and teaching guidance Outlining the process of formulating and refining an

initial diagnosis, in using this book the medical student or junior doctor will develop a critical self-awareness of the strategies they employ in assessing patients, learn how to improve and enhance their skills, and feel enabled to craft an appropriate management plan.
