**Lifestyle Medicine** Jeffrey I. Mechanick, Robert F. Kushner, 2025-05-26 This book represents the third in a series of Springer textbooks on Lifestyle Medicine by Dr. Mechanick and Dr. Kushner. The first book focused on theory and practice concepts. The second book focused on implementation with a specific tactic of building a lifestyle medicine center. This third book focuses on scientific evidence to close research gaps, knowledge gaps, and practice gaps. The general intent is to imbue

the field of lifestyle medicine with scientific evidence. The other intent is to continue advancing a culture of preventive care for chronic disease using lifestyle medicine, but again through a tactic of emphasizing science, evidence, and critical thinking. *Lifestyle Medicine: Closing Research, Practice, and Knowledge Gaps* is organized into three sections. In the first section, driver-based chronic disease models and other elements that pertain to lifestyle medicine are explored in terms of current levels of scientific substantiation. In the second section, educational modalities are presented that can improve awareness of scientific and experiential knowledge by healthcare professionals. Topics include innovative teaching models, web-based activities, training and accreditation programs, and certification exams. In the third section, a variety of clinical scenarios are presented to highlight practice gaps – implementation issues where there is inadequate clinical action despite an awareness of the pertinent knowledge. The topics span critical domains that must be addressed so that lifestyle medicine can lead to favorable outcomes in people and populations at risk. These domains include: alcohol and substance abuse, colitis, brain health, environmental risk, pharmacotherapy de-escalation, routine change, socioeconomic, transculturalization, advanced analytics, home cardiac rehabilitation, digital twin technology, and a highly referenced discussion of the lifestyle medicine ecosystem and infrastructure. Care is taken to provide not only theoretical foundations but also case studies, where appropriate, to emphasize critical aspects. In conclusion, this third book on Lifestyle Medicine will complement the previous two Springer books and define a compendium of resources necessary for anyone interested in this field.

*Matrix-Based Introduction to Multivariate Data Analysis* Kohei Adachi, 2016-10-11 This book enables readers who may not be familiar with matrices to understand a variety of multivariate analysis procedures in matrix forms. Another feature of the book is that it emphasizes what model underlies a procedure and what objective function is optimized for fitting the model to data. The author believes that the matrix-based learning of such models and objective functions is the fastest way to comprehend multivariate data analysis. The text is arranged so that readers can intuitively capture the purposes for which multivariate analysis procedures are utilized: plain explanations of the purposes with numerical examples precede mathematical descriptions in almost every chapter. This volume is appropriate for undergraduate students who already have studied introductory statistics. Graduate students and researchers who are not familiar with matrix-intensive formulations of multivariate data analysis will also find the book useful, as it is based on modern matrix formulations with a special emphasis on singular value decomposition among theorems in matrix algebra. The book begins with an explanation of fundamental matrix operations and the matrix expressions of elementary statistics, followed by the introduction of popular multivariate procedures with advancing levels of matrix algebra chapter by chapter. This organization of the book allows readers without knowledge of matrices to deepen their understanding of multivariate data analysis.

**Control Systems Design** Štefan Kozák, M. Huba, 2000 The aim of the IFAC Conference Control Systems Design was to bring together researchers and practitioners dealing with new theoretical and applied Control Engineering Areas, to report on current theoretical developments as well as applications in a variety of practical problems. The Conference addressed a wide interdisciplinary range of topics (Linear and Non-linear Control, Adaptive and Self-Tuning Control, Robust Control, Discrete Event Dynamic Systems Control, Predictive Control, Intelligent Control and Manufacturing). A large number of scientists and researchers in leading research institutions and universities from more than 25 countries participated in the Conference, and 110 papers were presented; papers were organised within one plenary, six regular, two invited and four poster sessions covering the following fields: -Linear and Non-linear Control Systems Design -Predictive Control Systems Design -Discrete Event Dynamic Systems Design -Robust Control Systems Design -Control Systems Design Applications A Round Table Discussion with the title Quo Vadis, Control Systems Design? allowed the attendees to join a broad discussion regarding the acceptance of new control methods in individual countries. The IFAC Conference Control Systems Design 2000 had a high professional level and has contributed to outlining the directions for further development of advanced control methods and their practice.

Graduate Medical Education Outcomes and Metrics National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, 2018-04-30 Graduate medical education (GME) is critical to the career development of individual physicians, to the functioning of many teaching institutions, and to the production of our physician

workforce. However, recent reports have called for substantial reform of GME. The current lack of established GME outcome measures limits our ability to assess the impact of individual graduates, the performance of residency programs and teaching institutions, and the collective contribution of GME graduates to the physician workforce. To examine the opportunities and challenges in measuring and assessing GME outcomes, the National Academies of Sciences, Engineering, and Medicine held a workshop on October 10–11, 2017, in Washington, DC. Workshop participants discussed: meaningful and measurable outcomes of GME; possible metrics that could be used to track these GME outcomes; possible mechanisms for collecting, collating, analyzing, and reporting these data; and further work to accomplish this ambitious goal. This publication summarizes the presentations and discussions from the workshop.
