Earth: Portrait of a Planet, 4th Ed Stephen Marshak, 2012

Earth Stephen Marshak, Donald R. Prothero, 2001 Since 1960, there have been two major theoretical advances in the Earth sciences: the theory of plate tectonics and the advent of Earth systems science. Stephen Marshak's beautifully written and illustrated new text is the first to incorporate both of these discoveries from its inception. *Earth: Portrait of a Planet* covers all the topics of a traditional physical geology course, but also includes such topics as historical geology, environmental geology, the Earth's resources, the oceans and atmosphere, cosmology, and global change. What results is a fascinating, comprehensive portrait of planet Earth.

Earth John Werner, Stephen Marshak, 2001-11 Written for students of geology, this text incorporates advances in earth science such as plate tectonics, global warming, and the interconnectivity between the history of Earth and the history of life. It begins with a brief discussion of cosmology and the world's origin.

The Man Who Found Time Jack Repcheck,2008-12-15 There are three men whose contributions helped free science from the straitjacket of theology. Two of the three-Nicolaus Copernicus and Charles Darwin-are widely known and heralded for their breakthroughs. The third, James Hutton, never received the same recognition, yet he profoundly changed our understanding of the earth and its dynamic forces. Hutton proved that the earth was likely millions of years old rather than the biblically determined six thousand, and that it was continuously being shaped and re-shaped by myriad everyday forces rather than one cataclysmic event. In this expertly crafted narrative, Jack Repcheck tells the remarkable story of this Scottish gentleman farmer and how his simple observations on his small tract of land led him to a theory that was in direct confrontation with the Bible and that also provided the scientific proof that would spark Darwin's theory of evolution. It is also the story of Scotland and the Scottish Enlightenment, which brought together some of the greatest thinkers of the age, from David Hume and Adam Smith to James Watt and Erasmus Darwin. Finally, it is a story about the power of the written word. Repcheck argues that Hutton's work was lost to history because he could not describe his findings in graceful and readable prose. (Unlike Darwin's *Origin of the Species*, Hutton's one and only book was impenetrable.) A marvelous narrative about a little-known man and the science he founded, *The Man Who Found Time* is also a parable about the power of books to shape the history of ideas.

Fundamentals of Environmental Chemistry, Third Edition Stanley E. Manahan,2011-03-05 Written by an expert, using the same approach that made the previous two editions so successful, *Fundamentals of Environmental Chemistry, Third Edition* expands the scope of book to include the strongly emerging areas broadly described as sustainability science and technology, including green chemistry and industrial ecology. The new edition includes: Increased emphasis on the applied aspects of environmental chemistry Hot topics such as global warming and biomass energy Integration of green chemistry and

sustainability concepts throughout the text More and updated questions and answers, including some that require Internet research Lecturers Pack on CD-ROM with solutions manual, PowerPoint presentations, and chapter figures available upon qualifying course adoptions The book provides a basic course in chemical science, including the fundamentals of organic chemistry and biochemistry. The author uses real-life examples from environmental chemistry, green chemistry, and related areas while maintaining brevity and simplicity in his explanation of concepts. Building on this foundation, the book covers environmental chemistry, broadly defined to include sustainability aspects, green chemistry, industrial ecology, and related areas. These chapters are organized around the five environmental spheres, the hydrosphere, atmosphere, geosphere, biosphere, and the anthrosphere. The last two chapters discuss analytical chemistry and its relevance to environmental chemistry. Manahan's clear, concise, and readable style makes the information accessible, regardless of the readers' level of chemistry knowledge. He demystifies the material for those who need the basics of chemical science for their trade, profession, or study curriculum, as well as for readers who want to have an understanding of the fundamentals of sustainable chemistry in its crucial role in maintaining a livable planet.

Earth Frank H. T. Rhodes, 2012-06-15 It's impossible to grasp the whole planet or integrate all the descriptions of it. But because we live here, we have to try. This is not just an artistic compulsion or an existential yearning, still less an academic exercise. It's a survival issue. This is the only planet we have. We're stuck here, and we don't own the place—it would be the height of arrogance to assume that we do. We're tenants here, not owners, but we're tenants with hope for a long-term tenancy. We want to extend our lease just as far as we can.—from *Earth: A Tenant's Manual* In *Earth: A Tenant's Manual*, the distinguished geologist Frank H. T. Rhodes, President Emeritus of Cornell University, provides a sweeping, accessible, and deeply informed guide to the home we all share, showing us how we might best preserve the Earth's livability for ourselves and future generations. Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life. He emphasizes the changes that are of concern to us today, from earthquakes to climate change and the clashes over the energy resources needed for the Earth's exploding population. He concludes with an extended exploration of humanity's prospects on a complex, protean, and ultimately finite world. It is not a question of whether the planet is sustainable; the challenge facing life on Earth—and the life of the Earth—is whether an expanding and high-consumption species like ours is sustainable. Only new resources, new priorities, new policies and, most of all, new knowledge, can reverse the damage that humanity is doing to our home—and ourselves. A sustainable human future, Rhodes concludes in this eloquent, sobering, but ultimately optimistic book, will require a sense of responsible stewardship, for we are not owners of this planet; we are tenants. Surveying the systems, large and small, that govern Earth's processes and influence its changes, Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs, or at least limit further

damage to our home.

Essentials of Geology Stephen Marshak, 2007 Based on the best-selling *Earth: Portrait of a Planet*, *Essentials of Geology* offers the same engaging writing, spectacular artwork, and helpful pedagogy as the parent text in a more concise format. This accessible introduction integrates traditional geologic concepts with the most recent theoretical advances, among them theories of plate tectonics and Earth systems science. The Second Edition has been carefully updated, including coverage of recent events such as Hurricane Katrina, and offers unparalleled multimedia tools for instructors and students. -- Amazon.com viewed October 12, 2020.

A to Z of Earth Scientists, Updated Edition Alexander Gates, 2019-10-01 *A to Z of Earth Scientists, Updated Edition* is a comprehensive A to Z reference of Earth scientists in areas including plate tectonics, climate change, and planetary science. Designed for high school through early college students, this is an ideal reference of notable Earth scientists from the 19th century to the present. Featuring nearly 200 entries and 100 black-and-white photographs, this title uses the device of biography in order to put a human face on science—a method that adds immediacy to the prose for the high school student who may have an interest in pursuing a career in the earth sciences. People covered include: James Hutton (1726-1797) William Smith (1769-1839) Charles Lyell (1797-1875) Mary Anning (1799-1847) Inge Lehmann (1888-1993) Walter Alvarez (1911-1988) Doris Malkin Curtis (1914-1991) Marie Tharp (1920-2006) David Keeling (1928-2005) Dawn Wright (1961-present)
