The Only Thing that Counts Ernest Hemingway, Maxwell Evarts Perkins, 1996 In 1924 F. Scott Fitzgerald told his editor Maxwell Perkins about a young American expatriate in Paris, an unknown writer with a brilliant future. When Perkins wrote to Ernest Hemingway several months later, he commenced a correspondence spanning more than two decades and charting the career of the most influential American author of this century. The letters collected here are the record of a remarkable professional alliance - an enduring friendship between editor and author - and of Hemingway's development as a writer. Determined to be a great novelist, Hemingway reported frequently on the pitfalls and triumphs of the writing process. While his fiction is characterized by precision and control, his letters reveal Hemingway at his most ebullient. Whether self-satisfied, bitter, or intoxicated, he wrote impassioned letters about everything that was on his mind, from literature and money to bull-fighting, fishing, and friendship. From Paris in the Twenties through the Depression, the Spanish Civil War, and World War II, the correspondence between these men provides inside commentary on an era marked by influential developments in both literature and politics. And finally, for anyone interested in books, editing, and authorship, Perkins and Hemingway's exchange on the subjects of advances, advertising, critics, jacket illustrations, and movie deals show how much has changed in book publishing and how much has stayed the same.--BOOK JACKET. Mining Google Web Services John Paul Mueller, 2006-07-14 Google Brings Data Mining to the People! Virtually everyone sees Google as, hands down, the best online search tool. Now you can use and improve on Google technology in

your own applications. Mining Google Web Services teaches you dozens of techniques for tapping the power of the Google API. Google already gives you fine-grained control over your search criteria, and this book shows you how to exert the same control in your own focused search and analysis applications. With just a little knowledge of JavaScript, VBA, Visual Studio 6, Visual Studio .NET, PHP, or Java, you will get better (and more relevant) search results--faster and more easily. Here's a little of what you'll find covered inside: Improving the speed and accuracy of searches Performing data mining across the Internet Using Google Web Services to search a single website Building search applications for mobile devices Using caching techniques to improve application performance and reliability Analyzing Google data Creating searches for users with special needs Discovering new uses for Google Obtaining historical data using cached pages Performing spelling checks on any text Reducing the number of false search hits Whether your goal is to improve your own searches or share specialized search capabilities with others, this is the one resource that will see you through the job from start to finish.
