Technologies in Biomedical and Life Sciences Education Harry J. Witchel, Michael W. Lee, 2022-06-24 This contributed volume focuses on understanding the educational strengths and weaknesses of mediated content (including media as a learning supplement), in comparison to traditional face-to-face learning. Each chapter includes research on, and a broad-brush summary of, approaches to combining life sciences education with educational technologies. The chapters are organized into four main sections, each of which focuses on a key question regarding the consequences of incorporating media into education. In this regard, the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity. Further, they address the ongoing discussion as to whether students need to be present for lectures, and on how having agency in their own learning can improve both retention and conceptual understanding. To link the content to current events, the authors also shed light on the impact that the COVID-19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies. Consequently, the book offers life science educators valuable guidance on the technologies already available, and an outlook on what is yet to come.

Enabling Health and Healthcare Through ICT Karen L. Courtney, Omid Shabestari, Alex Mu-Hsing Kuo, 2013 For many people in both developing and developed countries universal healthcare is still not the norm. Socio-economic status and geographical restrictions have proved to be major barriers to accessible care. The use of information and communication technologies (ICT) is growing rapidly internationally as the need to provide more efficient and cost-effective care becomes increasingly urgent. Improving the health of a nation begins with the individual and recent developments in genomics and mobile networked information technologies have regenerated interest in individualizing healthcare. Harnessing the diversity and ubiquity of available ICT may be one of the keys to enabling more accessible healthcare across both geographic and socio-economic divides. This book presents the proceedings of the 2013 Information Technology and Communication in Health (ITCH 2013) conference. This conference, entitled Available, Tailored and Closer, was held in Victoria, BC, Canada, in February 2013. The theme of the ITCH 2013 conference was realizing the enabling potential of information and communications technology worldwide. Papers in this book are arranged according to subject. Sections include: electronic health records; telecare, telemedicine and telaboratory; public health informatics; clinical decision support systems; human/computer interaction; patient safety; and healthcare modeling, among others. This book will be of interest to all those

involved in providing improved and cost-effective healthcare worldwide.

MicroRNA Detection and Target Identification Tamas Dalmay, 2023-01-23 This updated volume reflects new and evolved techniques to study detection, profiling, and manipulation of microRNAs (miRNAs) in plants and animals. After overviews of how best to detect, identify, and validate microRNAs, the book continues by exploring state-of-the-art protocols for microRNA detection, approaches to profile the expression level of microRNAs, spatial expression analysis, describe in silico analysis of microRNAs and their targets, as well as protocols for functional analysis of microRNAs and their targets by CRISPR/Cas. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step and readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and up-to-date, *MicroRNA Detection and Target Identification: Methods and Protocols*, Second Edition aims to ensure successful results in the further study of this vital field.

ePortfolios in Australian Universities Jennifer Rowley, 2016-09-14 This book focuses on essential findings concerning emerging practices of student learning through the teaching and learning benefits of the electronic portfolio (ePortfolio) in a range of disciplines at Australian universities. It explores the latest research on ePortfolios, teaching quality, future research directions for tertiary learning and teaching, institutional agendas in higher education, and the role that the ePortfolios can play in supporting improvements in pedagogic practice and student outcomes. Included in these agendas is research into the development of higher education through the technologising of pedagogy, learner identities in discrete disciplines, and the praxis of individual university teachers. The book covers accounts of academic learning success and challenges across current higher education subject areas. By presenting case study accounts of ePortfolio use, it reveals the importance of defining and documenting how we can meaningfully develop learner portfolios in research, teaching and learning at Australian universities. With an intentional research base, the book draws on work conducted inside and outside Australia and highlights how the ePortfolio can help tertiary staff prepare for the impact of a student-created portfolio on teaching, learning, and subsequent academic scholarship.
