Solar Energy Applications to Dwellings Willeke Palz, C. den Ouden, 2012-12-06 The objectives of the Modelling Sub-Group are to unify European research in the field of computer models, to provide the best simplified models in the Passive Solar Working Group's extensive European Passive Solar Handbook and to ensure that these simple models are easy to use for design purposes. It has defined the needs of the research program for a large model and has chosen the Scottish program ESP as a large simulation model to be used as a reference for the analysis of the simplified ones. Each participant has commissioned the chosen model on his own computer and run a very simple exercise, just to verify that the program works similarly on the different machines. The analysis of the large model is being brought on its different sections, such as : input, output, heat transfer, passive solar systems, etc. The group will run ESP using the same passive solar building data as inputted to simplified models to assess the sensitivity of the latter ones. It will report on the work needed for the next 4 year CEC research program.

**Installer un chauffage ou un chauffe-eau solaire** Pierre Amet, G. Gourdon, Y. Guern, R. Jules, E. Marguet, F. Mykieta, 2011-07-07 De l'installation d'un simple chauffe-eau solaire au système de chauffage avec eau chaude sanitaire, cet ouvrage pose les fondamentaux pour comprendre et s'approprier les connaissances techniques nécessaires à la réalisation d'une installation solaire thermique. La partie théorie vous permettra de concevoir correctement votre installation

(dimensionnement, orientation des capteurs, transport et stockage des calories, régulation, etc.), de choisir le matériel à utiliser, et d'évaluer le montant de l'économie rendue possible par le solaire. La partie technique présente les réalisations et les témoignages de 5 constructeurs. Les choix techniques et la mise en oeuvre de chaque chantier sont décrits dans le détail, de même que leur rentabilité financière et les améliorations pouvant encore leur être apportées. Les niveaux de difficultés de ces réalisations diffèrent en fonction des compétences des autoconstructeurs : d'une simple installation solaire en direct dans le plancher chauffant gérée par une petite régulation solaire du commerce à l'utilisation d'un stockage intermédiaire dans un ballon d'eau morte associée à une régulation par automate programmable du commerce, ou même directement par ordinateur. Ce livre s'adresse aux particuliers qui souhaitent se lancer dans l'auto-installation ou simplement maîtriser le vocabulaire technique et comprendre les devis d'installateurs, ainsi qu'aux artisans et installateurs voulant compléter leurs connaissances techniques et découvrir des exemples de réalisations.
