Introducing Novel Trends in the Nutrition of Monogastric Farm Animals for the Production of High-Quality Livestock Products Vassilios Dotas,George Symeon,Karoly DublecZ,Kadir Erensoy,2025-01-17 The rearing of monogastric farm animals, especially pigs and poultry, is one of the most significant animal husbandry activities worldwide, since it contributes approximately 75% to global meat production and fully covers the needs for eggs, providing animal protein sources of high nutritional and biological value. Pig and poultry production has demonstrated admirable adaptability to changing international conditions and to modern consumer concerns and attitudes through its wide variety of products, increased productivity, and alternative production systems and feeding schemes. However, considerable work remains to be done in terms of research and development, notably regarding to climate change, welfare concerns and overall sustainability of production, particularly considering the protracted energy and economic crises, and the threats to food security.
