Into the Ruins Joel Caris, Greta Hayer, Catherine McGuire, Holly Schofield, Alistair Herbert, Violet Bertelsen, K. L. Cooke, 2018-03 A future seer tells a mad king his future under the threat of death. Two men isolated on a Northwest island work to re-establish contact with a devastated outside world. A powerful woman struggles with how to respond to the upcoming power shifts in both her society and home. And a man's life is changed after a chance encounter in the forest leads to an intense love affair. These are just a few of the stories found in this eighth issue of Into the Ruins, continuing our exploration of future worlds riven with the consequences of today's actions. These are worlds near and far in the future, uniquely their own, giving glimpses into the sort of realities we actually do face while making clear that the worlds of tomorrow are just as compelling and complicated as the world of today.

Equations of Mathematical Physics Andrej Nikolaevič Tikhonov (Mathematician), Aleksandr Andreevich Samarskiĭ, 1990-01-01 Mathematical physics plays an important role in the study of many physical processes — hydrodynamics, elasticity, and electrodynamics, to name just a few. Because of the enormous range and variety of problems dealt with by mathematical physics, this thorough advanced-undergraduate or graduate-level text considers only those problems leading to partial differential equations. The authors — two well-known Russian mathematicians — have focused on typical physical processes and the principal types of equations dealing with them. Special attention is paid throughout to mathematical formulation, rigorous solutions, and physical interpretation of the results obtained. Carefully chosen problems designed to promote technical skills are contained in each chapter, along with extremely useful appendices that supply applications of solution methods described in the main text. At the end of the book, a helpful supplement discusses special functions, including spherical and cylindrical functions.
