Quips, Quotes, and Quanta Anton Z. Capri, 2011 When a ship's surgeon during a routine episode of bloodletting noticed that the sailors' blood was brighter in the tropics than in the north, he hypothesized that heat was a form of energy. When a young boy tried to visualize how a beam of light would look like by riding alongside it at the same speed, he began thinking along lines that eventually changed our views of space and time. When a student caught hay fever and went to recover on Heligoland, he started a major revolution in physics. These are but just some of the stories covered in this entertaining book that deals with the history of physics from the end of the 19th-century to about 1930. Quips, Quotes and Quanta (2nd Edition) is unique in that it contains anecdotes on physicists creating new ideas. Often the thinking of the creators of what is now called modern physics is revealed through quotes. Thematic and biographical in nature, this book also includes many

personal incidents. This second edition has been revised to include new material: a prologue, epilogue, glossary and chronology, and photograph's as well as additional quotes and anecdotes.

From Yahweh to Yahoo! Doug Underwood,2010-10-01 Presenting religion as journalism's silent partner, From Yahweh to Yahoo!provides a fresh and surprising view of the religious impulses at work in contemporary newsrooms. Focusing on how the history of religion in the United States entwines with the growth of the media, Doug Underwood argues that American journalists draw from the nation's moral and religious heritage and operate, in important ways, as personifications of the old religious virtues. Underwood traces religion's influence on mass communication from the biblical prophets to the Protestant Reformation, from the muckraker and Social Gospel campaigns of the late nineteenth and early twentieth centuries to the modern age of mass media. While forces have pushed journalists away from identifying themselves with religion, they still approach such secular topics as science, technology, and psychology in reverential ways. Underwood thoughtful analysis covers the press's formulaic coverage of spiritual experience, its failure to cover new and non-Christian religions in America, and the complicity of the mainstream media in launching the religious broadcasting movement.

Identified Flying Objects Dr. Michael P. Masters,2019-03-22 Could “UFOs” and “Aliens” simply be us, but from the future? This provocative new book cautiously examines the premise that extraterrestrials may instead be our distant human descendants, using the anthropological tool of time travel to visit and study us in their own hominin evolutionary past. Dr. Michael P. Masters, a professor of biological anthropology specializing in human evolutionary anatomy, archaeology, and biomedicine, explores how the persistence of long-term biological and cultural trends in human evolution may ultimately result in us becoming the ones piloting these disc-shaped craft, which are likely the very devices that allow our future progeny to venture backward across the landscape of time. Moreover, these extraterrestrials are ubiquitously described as bipedal, large-brained, hairless, human-like beings, who communicate with us in our own languages, and who possess technology advanced beyond, but clearly built upon, our own. These accounts, coupled with a thorough understanding of the past and modern human condition, point to the continuation of established biological and cultural trends here on Earth, long into the distant human future.

Art Meets Mathematics in the Fourth Dimension Stephen Leon Lipscomb,2014-10-13 To see objects that live in the fourth dimension we humans would need to add a fourth dimension to our three-dimensional vision. An example of such an object that lives in the fourth dimension is a hyper-sphere or “3-sphere.” The quest to imagine the elusive 3-sphere has deep historical roots: medieval poet Dante Alighieri used a 3-sphere to convey his allegorical vision of the Christian afterlife in his

Divine Comedy. In 1917, Albert Einstein visualized the universe as a 3-sphere, describing this imagery as “the place where the reader’s imagination boggles. Nobody can imagine this thing.” Over time, however, understanding of the concept of a dimension evolved. By 2003, a researcher had successfully rendered into human vision the structure of a 4-web (think of an ever increasingly-dense spider’s web). In this text, Stephen Lipscomb takes his innovative dimension theory research a step further, using the 4-web to reveal a new partial image of a 3-sphere. Illustrations support the reader’s understanding of the mathematics behind this process. Lipscomb describes a computer program that can produce partial images of a 3-sphere and suggests methods of discerning other fourth-dimensional objects that may serve as the basis for future artwork.

Einstein's Theories of Relativity and Gravitation James Malcolm Bird,1921 Einstein's theory of relativity confounded and excited both professional and amateur scientists with its explanation of the intricacies of how the world and the universe truly work, rather than how people wished or believed they worked. His view of relativity dismantled Newton's theory of space and time as absolutes, adding the concept of curved space-time, which deals with the velocity of motion. Einstein explains his theory of physics in a way that was designed not only for scientists with a knowledge of the complicated math involved but for the general reader as well.

About Time Paul Davies,P. C. W. Davies,1996 With wit and clarity, the author of more than 20 popular science books, including *God and the New Physics* and *The Last Three Minutes*, now explores the riddle of time, examining the consequences of Einstein's theory of relativity and offering startling suggestions about what recent research may reveal. 50 line drawings.
