Handbook of Self-Regulation, Second Edition Kathleen D. Vohs, Roy F. Baumeister, 2011-03-29 This authoritative handbook comprehensively examines the conscious and nonconscious processes by which people regulate their thoughts, emotions, attention, behavior, and impulses. Individual differences in self-regulatory capacities are explored, as are developmental pathways. The volume reviews how self-regulation shapes, and is shaped by, social relationships. Failures of self-regulation are also addressed, in chapters on addictions, overeating, compulsive spending, and attention-deficit/hyperactivity disorder. Wherever possible, contributors identify implications of the research for helping people enhance their self-regulatory capacities and pursue desired goals.

Neurocognitive Development: Normative Development, 2019-09-22 This is one of a two-volume work on neurocognitive development, focusing separately on normative and non-normative development. The normative volume focuses on neurology, biology, genetics, and psychology of normative cognitive development. It covers the development of intellectual abilities, visual perception, motor function, language, memory, attention, executive function, social cognition, learning abilities, and affect and behavior. The book identifies when and how these functions develop, the genetics and neurophysiology of their operation, and their evaluation and assessment in clinical practice. This book will serve as a comprehensive reference to researchers in cognitive development in neuroscience, psychology, and medicine, as well as to clinicians and allied health professionals focused on developmental disabilities (child neurologists, pediatric neuropsychologists, child psychiatrists, speech and language therapists, and occupational therapists.) - Summarizes research on normative neurocognitive development - Includes intellectual abilities, language, memory, attention, motor function, and more - Discusses genetics and environmental influences on development - Provides interdisciplinary information of use to both researchers and clinicians

Ebook: Child Development: An Introduction John Santrock, 2014-10-16 Accurate. Reliable. Engaging. These are just a few of the words used by adopters and reviewers of John Santrock's Child Development. The new topically-organised fourteenth edition continues with Santrock's highly contemporary tone and focus, featuring over 1,000 new citations. The popular Connections theme shows students the different aspects of children's development to help them better understand the concepts. Used by hundreds of thousands of students over thirteen editions, Santrock's proven learning goals system

provides a clear roadmap to course mastery.

Rethinking Self-Control Matthew C. Haug, 2025-01-21 Research on self-control in both philosophy and psychology is thriving. Yet, despite a wealth of recent philosophical work on the exercise of self-control, there has been surprisingly little empirically informed work in philosophy on self-control as a psychological trait. This book aims to fill this gap. There is abundant evidence that self-control is beneficial both to those who have it and to the societies in which they live. This book shows that the neo-Aristotelian framework for understanding self-control-related traits, which has dominated both philosophy and the sciences, is psychologically unrealistic and should be replaced. The traditional conceptions of temperance and continence need to be revised so that they reflect actual human capacities. The author argues for an indirect harmony hypothesis, which claims that high trait self-control consists in having an excellent ability to use indirect strategies to achieve motivational harmony that would not otherwise be possible. He fruitfully combines work from ancient Greek philosophy, contemporary virtue ethics, philosophy of action, moral psychology, social psychology, and cognitive neuropsychology to develop a novel hypothesis about what constitutes human excellence with respect to self-control. *Rethinking Self-Control* is an essential resource for philosophers and psychologists interested in virtue ethics, moral psychology, philosophy of mind, philosophy of action, and ancient philosophy.

Executive Functions Adele Diamond, 2013 Executive functions (EFs) make possible mentally playing with ideas; taking the time to think before acting; meeting novel, unanticipated challenges; resisting temptations; and staying focused. Core EFs are inhibition [response inhibition (self-control--resisting temptations and resisting acting impulsively) and interference control (selective attention and cognitive inhibition)], working memory, and cognitive flexibility (including creatively thinking "outside the box," seeing anything from different perspectives, and quickly and flexibly adapting to changed circumstances). The developmental progression and representative measures of each are discussed. Controversies are addressed (e.g., the relation between EFs and fluid intelligence, self-regulation, executive attention, and effortful control, and the relation between working memory and inhibition and attention). The importance of social, emotional, and physical health for cognitive health is discussed because stress, lack of sleep, loneliness, or lack of exercise each impair EFs. That EFs are trainable and can be improved with practice is addressed, including diverse methods tried thus far.

Early Childhood Education Redefined Pat Preedy, Kay Sanderson, Sir Christopher Ball, 2018-06-14 Probing the shortcomings of contemporary early years provision, whilst offering practical and informed solutions, *Early Childhood Education Redefined* at once celebrates the progress made in this field since the publication of the 'Start Right Report' (1994), whilst also calling for further changes to ensure that all children are able to 'start right', to become effective, independent learners. Developing and emphasising the importance of concepts which have become overlooked within modern educational policy and practice, yet which remain key to our children's development, this book considers how

elements such as attachment and love; movement and exercise; and language and talk may be better integrated into early years practice via the three main vectors of parenting, the curriculum, and pedagogy. From a revised curriculum from birth to seven renamed Key Stage 1, to a greater emphasis on formative assessment, and the promotion of pedagogies including purposeful play, planning in the moment and attachment theory, chapters build on the principles set out in the 'Start Right Report' and take into consideration the research and reflection developed over the last quarter of a decade. Reopening a vital debate and challenging governments, education providers, parents and professionals to re-define what young children need to grow, develop and learn in our contemporary society, this timely response to the 'Start Right Report' is essential reading for all those involved in early years research, education and care.

Executive Functions Russell A. Barkley, 2012-05-01 This groundbreaking book offers a comprehensive theory of executive functioning (EF) with important clinical implications. Synthesizing cutting-edge neuropsychological and evolutionary research, Russell A. Barkley presents a model of EF that is rooted in meaningful activities of daily life. He describes how abilities such as emotion regulation, self-motivation, planning, and working memory enable people to pursue both personal and collective goals that are critical to survival. Key stages of EF development are identified and the far-reaching individual and social costs of EF deficits detailed. Barkley explains specific ways that his model may support much-needed advances in assessment and treatment. See also Barkley's empirically based, ecologically valid assessment tools: Barkley Deficits in Executive Functioning Scale (BDEFS for Adults) and Barkley Deficits in Executive Functioning Scale--Children and Adolescents (BDEFS-CA).

Prefrontal Cortex Cognitive Deficits in Children Treated Early and Continuously for PKU Adele Diamond, 1997
Phenylketonuria (PKU) is the leading biochemical cause for mental retardation in children. The study suggests levels of tyrosine reaching the brain are directly relational to the cognitive functions in the prefrontal cortex.

Executive Function(s): Conductor, Orchestra or Symphony? Towards a Trans-Disciplinary Unification of Theory and Practice Across Development, in Normal and Atypical Groups Lynne A. Barker, Nicholas Morton, 2018-08-30 There are several theories of executive function(s) that tend to share some theoretical overlap yet are also conceptually distinct, each bolstered by empirical data (Norman and Shallice, 1986; Shallice & Burgess, 1991; Stuss and Alexander, 2007; Burgess, Gilbert, & Dumentheil, 2007; Burgess & Shallice, 1996; Miyake et al., 2000). The notion that executive processes are supervisory, and most in demand in novel situations was an early conceptualization of executive function that has been adapted and refined

over time (Norman & Shallice, 1986; Shallice, 2001; Burgess, Gilbert & Dumentheil, 2007). Presently there is general consensus that executive functions are multi-componential (Shallice, 2001), and are supervisory only in the sense that attention in one form or another is key to the co-ordination of other hierarchically organized 'lower' cognitive processes. Attention in this sense is defined as (i) independent but interrelated attentional control processes (Stuss & Alexander, 2007); (ii) automatic orientation towards stimuli in the environment or internally-driven thought (Burgess, Gilbert & Dumontheil, 2007); (iii) the automatically generated interface between tacit processes and strategic conscious thought (Barker, Andrade, Romanowski, Morton and Wasti, 2006; Morton and Barker, 2010); and (iv) distinct but interrelated executive processes that maintain, update and switch across different sources of information (Miyake et al., 2000). One problem is that executive dysfunction or dysexecutive syndrome (Baddeley & Wilson, 1988) after brain injury typically produces a constellation of deficits across social, cognate, emotional and motivational domains that rarely map neatly onto theoretical frameworks (Barker, Andrade & Romanowski, 2004). As a consequence there is debate that conceptual theories of executive function do not always correspond well to the clinical picture (Manchester, Priestley & Jackson, 2004). Several studies have reported cases of individuals with frontal lobe pathology and impaired daily functioning despite having little detectable impairment on traditional tests of executive function (Shallice & Burgess, 1991; Eslinger & Damasio, 1985; Barker, Andrade & Romanowski, 2004; Andrés & Van der Linden, 2002; Chevignard et al., 2000; Cripe, 1998; Fortin, Godbout & Braun, 2003). There is also some suggestion that weak ecological validity limits predictive and clinical utility of many traditional measures of executive function (Burgess et al, 2006; Lamberts, Evans & Spikman, 2010; Barker, Morton, Morrison, McGuire, 2011). Complete elimination of environmental confounds runs the risk of generating results that cannot be generalized beyond constrained circumstances of the test environment (Barker, Andrade & Romanowski, 2004). Several researchers have concluded that a new approach is needed that is mindful of the needs of the clinician yet also informed by the academic debate and progress within the discipline (McFarquhar & Barker, 2012; Burgess et al., 2006). Finally, translational issues also confound executive function research across different disciplines (psychiatry, cognitive science, and developmental psychology) and across typically developing and clinical populations (including Autism Spectrum Disorders, Head Injury and Schizophrenia - Blakemore & Choudhury, 2006; Taylor, Barker, Heavey & McHale, 2013). Consequently, there is a need for unification of executive function approaches across disciplines and populations and narrowing of the conceptual gap between theoretical positions, clinical symptoms and measurement.
