The Oxford Handbook of Roman Sculpture Elise A. Friedland, Melanie Grunow Sobocinski, Elaine K. Gazda, 2015 The study of Roman sculpture has been an essential part of the disciplines of Art History and Classics since the eighteenth century. Famous works like the Laocöon, the Arch of Titus, and the colossal portrait of Constantine are familiar to millions. Again and again, scholars have returned to sculpture to answer questions about Roman art, society, and history. Indeed, the field of Roman sculptural studies encompasses not only the full chronological range of the Roman world but also its expansive geography, and a variety of artistic media, formats, sizes, and functions. Exciting new theories, methods, and approaches have transformed the specialized literature on the subject in recent decades. Rather than creating another chronological catalogue of representative examples from various periods, genres, and settings, *The Oxford Handbook of Roman Sculpture* synthesizes current best practices for studying this central medium of Roman art, situating it within the larger fields of Art History, Classical Archaeology, and Roman Studies. This comprehensive volume fills the gap between introductory textbooks and highly focused professional literature. *The Oxford Handbook of Roman Sculpture* conveniently presents new technical, scientific, literary, and theoretical approaches to the study of Roman sculpture in one reference volume while simultaneously complementing textbooks and other publications that present well-known works in the corpus. The contributors to this volume address metropolitan and provincial material from the early republican period through late antiquity in an engaging and fresh style. Authoritative, innovative, and up-to-date, *The Oxford Handbook of Roman Sculpture* will remain an invaluable resource for years to come.

UV-Vis Luminescence Imaging Techniques / Técnicas de imagen de luminiscencia UV-Vis Piccolo, Marcello, Stols-

Witlox, Maartje, Fuster López, Laura, 2020-03-04 Ever since its first introduction in the field of conservation, the role of UV-VIS luminescence/fluorescence (UVL and UVf, respectively) imaging has been expanding. The unique and significant contribution of this technique for investigation of cultural heritage has led to the development of new methodologies and applications. Each chapter in this volume can be read independently. While this means that some repetition may occur between the individual chapters, in particular regarding the explanation of terminology and methodology, such overlap provides interesting opportunities for cross-comparison of both terminology and methodology. In addition, it highlights similarities and differences between different situations in the practical application.
