Exercises in Architecture Simon Unwin, 2022-08-01 This revised edition of *Exercises in Architecture: Learning to Think as an Architect* is full of new content, building on the success of the previous edition. All the original exercises have been revised and new ones added, with the format changing to allow the inclusion of more supplementary material. The aim remains the same, to help pre- or early-course architecture students begin and develop their ability to think as architects. Learning to do architecture is tricky. It involves awakening abilities that remain dormant in most people. It is like learning language for the first time; a task made more mystifying by the fact that architecture deals not in words but in places: places to stand, to walk, to sit, to hide, to sleep, to cook, to eat, to work, to play, to worship... This book was written for those who want to be architects. It suggests a basis for early experiences in a school of architecture; but it could also be used in secondary schools and colleges, or as self-directed preparation for students in the months before entering professional education. *Exercises in Architecture* builds on and supplements the methodology for architectural analysis presented in the author's previous book *Analysing Architecture: the Universal Language of Place-Making* (fifth edition, 2021) and demonstrated in his *Twenty-Five Buildings Every Architect Should Understand* (Routledge, 2015). Together, the three books, deal with the three aspects of learning any creative discipline: 1. *Analysing Architecture* provides a methodology for analysis that develops an understanding of the way architecture works; 2. *Twenty-Five Buildings* explores and extends that methodology through analysis of examples as case studies; and 3. *Exercises in Architecture* offers a way of expanding understanding and developing fluency by following a range of rudimentary and more sophisticated exercises. Those who wish to become professional architects (wherever in the world they might be) must make a conscious effort to learn the universal language of architecture as place-making, to explore its powers and how they might be used. The exercises in this book are designed to help.

Drawing Imagining Building Paul Emmons, 2019-04-01 Drawing Imagining Building focuses on the history of hand-drawing practices to capture some of the most crucial and overlooked parts of the process. Using 80 black and white images to illustrate the examples, it examines architectural drawing practices to elucidate the ways drawing advances the architect's imagination. Emmons considers drawing practices in the Renaissance and up to the first half of the twentieth century. Combining systematic analysis across time with historical explication presents the development of hand-drawing, while also grounding early modern practices in their historical milieu. Each of the illustrated chapters considers formative aspects of architectural drawing practice, such as upright elevations, flowing lines and occult lines, and drawing scales to identify their roots in an embodied approach to show how hand-drawing contributes to the architect's productive imagination. By documenting some of the ways of thinking through practices of architectural hand-drawing, it describes how practices can enrich the ethical imagination of the architect. This book would be beneficial for academics, practitioners, and students of architecture, particularly those who are interested in the history and significance of hand-drawing and technical drawing.

Ceilings and Dreams Paul Emmons, Federica Goffi, Jodi La Coe, 2019-07-08 Where is the space for dreaming in the twenty-first century? Lofty thoughts, like dreams, are born and live overhead, just as they have been represented in Renaissance paintings and modern cartoons. Ceilings are often repositories of stories, events and otherwise invisible oneiric narratives. Yet environments that inspire innovative thinking are dwindling as our world confronts enormous challenges, and almost all of our thinking, debating and decision-making takes place under endless ceiling grids. Quantitative research establishes that spaces with taller ceilings elicit broader, more creative thoughts. Today, ceilings are usually squat conduits of technology: they have become the blind spot of modern architecture. The twenty essays in this book look across cultures, places and ceilings over time to discover their potential to uplift the human spirit. Not just one building element among many, the ceiling is a key to unlock the architectural imagination. Ceilings and Dreams aims to correct this blind spot and encourages architects and designers, researchers and students, to look up through writings organized into three expansive categories: reveries, suspensions and inversions. The contributors contemplate the architecture of levity and the potential of the ceiling, once again, as a place for dreaming.
