Analytical and Practical Aspects of Drug Testing in Hair Pascal Kintz, 2006-08-30 Written by well-known, international authors, this comprehensive reference provides practical coverage of the best hair drug testing techniques and examines the drugs themselves. The authors review all new developments, the validation of analytical procedures, and the interpretation of data. Some of the applications discussed include doping, drug-facilitated crime investigating, workplace testing, and the granting of drivers' licenses. The authors describe specific drugs, such as opiates, cocaine, and cannabis, and discuss the different testing methods of them. The book also covers postmortem toxicology, pitfalls created by passive exposure, and testing for metals, including inductively coupled plasma spectrometry (ICP-MS), hair multielement

Karch's Drug Abuse Handbook Steven B. Karch, Bruce A. Goldberger, 2022-11-29 Karch's Drug Abuse Handbook, Third Edition remains the quintessential compendium addressing the pharmacological, medical, and legal aspects of drugs and informing the forensic community of the latest scientific advances and emergent practices. For this edition, Dr. Karch has brought on clinical and forensic toxicology expert Dr. Bruce Goldberger, editor-in-chief of the Journal of Analytical Toxicology and president of the American Board of Forensic Toxicology, to serve as co-editor. In addition, world-renowned scientists and medical professionals have contributed their work and expertise in tackling the latest developments in drug testing, drug-related medical emergencies, and the drug toxicology. Topics addressed include genetic testing in drug death investigation, pathology, toxicogenetics, alcohol, post-mortem toxicology, new psychoactive substances, the latest legal issues and challenges as well as drugs and drug testing in sports, and the ethical, legal, and practical issues involved. Vivid pictures and diagrams throughout illustrate the pathological effects of drugs and the chemical make-up and breakdown of abused drugs. With unparalleled detail, the latest research and the highest level of authoritative medical scientific information, The Drug Abuse Handbook, Third Edition remains the definitive resource for drug related issues.

Police Drug Testing, 1987 Information and guidance are provided to law enforcement agencies considering or in the process of implementing drug testing programs. The report combines information about technical, legal, and policy issues of concern to police agencies with practical advice from five major departments that are operating drug testing programs (District of Columbia, Chicago, Honolulu, Miami, and Louisville). The report provides an overview of Federal, State, and local drug testing policy initiatives as well as specific information on different types of urine tests and the situations in which they are being used (e.g., testing of tenured officers based on reasonable suspicion, in sensitive jobs, and during medical

examinations). The authors stress the importance of using reliable, accurate testing methods and of issuing clear written procedures that provide for the privacy, confidentiality, and due process rights of employees. Appendixes present the drug testing policies and procedures of the five departments consulted in the study. Tables, chapter notes, and appendixes.

Novel Psychoactive Substances Paul I. Dargan, David M. Wood, 2013-08-06 Novel Psychoactive Substances:

Classification, Pharmacology and Toxicology provides readers with background on the classification, detection, supply and availability of novel psychoactive substances, otherwise known as legal highs. Critical Issues in Alcohol and Drugs of Abuse Testing Amitava Dasgupta, 2019-01-10 Critical Issues in Alcohol and Drugs of Abuse Testing, Second Edition, addresses the general principles and technological advances for measuring drugs and alcohol, along with the pitfalls of drugs of abuse testing. Many designer drugs, for example, are not routinely tested in drugs of abuse panels and may go undetected in a drug test. This updated edition is a must-have for clinical pathologists, toxicologists, clinicians, and medical review officers and regulators, bridging the gap between technical and clinical information. Topics of note include the monitoring of pain management drugs, bath salts, spices (synthetic marijuana), designer drugs and date rape drugs, and more. - Serves as a ready resource of information for alcohol and drug testing - Ideal resource for making decisions related to the monitoring and interpretation of results - Includes concise content for clinical laboratory scientists, toxicologists and clinicians

Field-deployable Gas Chromatography-mass Spectrometry [GC-MS] Analysis of Illicit Drugs Leah Rynearson, 2019 False positive results from on-scene illicit drug analysis using presumptive color tests have caused numerous wrongful arrests (Lieblein 2018). In many states, forensic laboratories do not ever receive the sample for confirmative identification unless the defendant goes to trial, which makes it impossible to know the severity of this problem. Additionally, some defendants take a plea deal, which can result in these defendants spending months or years in prison for a crime they did not commit.

Improving the reliability of on-scene illicit drug testing by incorporating confirmatory methods capable of achieving very low limits of detection such as gas chromatography-mass spectrometry (GC-MS) into the field could help reduce these wrongful arrests. The purpose of this research was to build a spectral library of illicit drugs and additive spectra for a commercially available portable ion-trap GC-MS, the Torion T-9 from Perkin-Elmer. Due to the potential for space charge and ion-ion interactions in ion trap mass spectrometers, the resulting MS spectra produced can be different than standard quadrupole MS. Thus, a customized library for this type of field application is critical. Over fifty (50) illicit drugs and fifteen (15) additives were used to create a GC-MS library after repeated testing. This customized GC-MS library was then used to test the ability to detect and identify illicit substances and their additives in seized drug samples, provided by the Connecticut State Police K9 Unit, which had not undergone laboratory testing. In addition, results were compared with data generated from the same samples using a field-portable quadrupole GC-MS. Of the twelve (12) samples tested, a positive identification for a controlled substance was made for ten (10) of them, using spectral data in the customized GC-MS library. The other two (2) contained unknown peaks that were not identified by any available GC-MS or MS library. Future studies should work on refining the retention time for each drug, performing tests with different versions of the Torion T-9 to ensure robustness of the GC-MS library, and continuous addition of illicit drug and additive standards to further expand the GC-MS library.

Pre-employment Drug Screening Guidelines, 1992 These guidelines developed by the California Commission on Peace Officer Standards and Training (POST) are to be used by agencies to conduct the pre-employment drug screening that should be a component of their comprehensive substance abuse programs. The guidelines are designed to help law enforcement agencies implement legally defensible and cost-efficient programs. A brief discussion of legal issues concerning drug screening of prospective employees covers the relevant court decisions and Federal guidelines contained in the Americans with Disabilities Act. The section on technical issues discusses some of the important program considerations regarding specimen collection, analytical methodologies, substances to be tested, and laboratories. The section on procedural issues addresses the logistics of moving applicants through the drug screening process in a secure and efficient way and examines issues including collection site security, chain of custody, and personal privacy. National Institute on Drug Abuse specimen collection guidelines are outlined, current California law enforcement policies are described, and recommendations from the model testing policy of the International Association of Chiefs of Police are provided. Supporting documents are contained in the appendixes.
