Implants in Qualitatively Compromised Bone Georg Watzek, 2004 Bone quality is one of the most important factors in the successful osseointegration of dental implants. However, the concepts of bone quality and compromised bone have never been well defined in the field of implant dentistry. To provide a clear definition of these terms, the contributors to this volume have compiled data from almost two decades of experimental and case studies, resulting in a comprehensive review of the current knowledge regarding the placement of implants in compromised bone. The book also presents specific considerations for placing implants in different types of compromised bone, such as aged, underdeveloped, and irradiated bone. A useful work of reference for implant students, practicing implant clinicians, and implant-oriented researchers.

Lynch, 2008 This new edition reflects the remarkable clinical and scientific advances in bone and soft tissue reconstruction since publication of the first edition of this award-winning book 7 years ago. The reader will find information about the basic principles of tissue engineering, use of growth factors in orthopedics, and potential applications of gene therapy in dentistry. The book also features chapters on periodontal regeneration and localized implant site development. A section on applications for craniofacial reconstruction describes procedures for use of growth factors in the treatment of defects. The

final section addresses orthopedic indications for tissue engineering. An invaluable, up-to-date resource for practitioners wanting to integrate tissue engineering into their clinical practice, researchers seeking inspiration for new directions, and those new to this fascinating field.

Decision Making in Periodontology Walter B. Hall, 1998 DECISION MAKING IN PERIODONTOLOGY illustrates the thought processes in the field of periodontics that determine optimal therapy for an individual patient. The chapters present common clinical problems in a format that enables the reader to find solutions more easily than in traditional texts. In addition, several readily available references are included with each chapter. The text is organized into eleven sections from the most basic to the most complex for assistance with problem solving in dental practices. Sections include: History Taking, Indications for Collecting and Recording Data, Signs and Symptoms, Initial Therapy Evaluation, and Detecting and Recording Findings, Differential Diagnosis and Treatment Planning (among others) that focus on clinician's concerns. * Each chapter includes several readily available references, organized into sections from most basic to most complex. * Decision tree format is provided for each clinical problem or situation. * Signs and symptoms section presents unique diagnostic approach options shown in the algorithms. * Includes decision trees that address periodontal treatment for impacted third molars and five different types of implants.
