On To Mars! Vladimir PLETSEK, 2017-11-27 This book introduces the Martian simulations of The Mars Society, the first one installed on Devon Island, an uninhabited island in the Canadian Arctic, well within the polar circle, and the second in the desert of Utah, several hundreds of kilometers South of Salt Lake City. The book is based on the diaries held during the simulations, by Vladimir Pletser, a physicist-engineer, who was selected to participate in these simulations. It relates the details of everyday life in these Martian habitats and of the scientific and exploratory work conducted in these extreme environments in preparation for future manned missions to Mars. Through the real experiences described in the book, readers will find space explorations and living on Mars more tangible.

Origins of 21st-century Space Travel Glen R. Asner, Stephen J. Garber, 2019 As early as April 1999, NASA Administrator Dan Goldin established the Decadal Planning Team (DPT), to provide a forum for future Agency leaders to begin considering goals more ambitious than sending humans on missions to near-Earth destinations and robotic spacecraft to far-off destinations, with no relation between the two. Goldin charged DPT with devising a long-term strategy that would

integrate the entire range of the Agency's capabilities, in science and engineering, robotic and human spaceflight, to reach destinations beyond low-Earth orbit. When the Bush administration initiated interagency discussions in 2003 to consider a new spaceflight strategy, NASA was prepared with technical and policy options, as well as a team of individuals who had spent years preparing for the moment. Although elements of the policy that President Bush announced at NASA Headquarters in January 2004, the Vision for Space Exploration (VSE), differed from the plans developed by DPT and its successor, the NASA Exploration Team (NeXT), the benefits of preparation were unmistakable. From the moment President Bush announced the VSE, NASA stood ready to implement it. Key decisions, such as setting a termination date for Shuttle flights and initiating development of technologies for deep space exploration, heralded a paradigm shift, allowing both NASA and the U.S. space community to move beyond the infrastructure, technologies, and institutional arrangements that had sustained low-Earth orbit operations for more than two decades. This book provides a detailed historical account of the plans, debates, and decisions that opened the way for a new generation of spaceflight at the start of the 21st Century.
