Stacey Joy Netzel

**ECSCW 2001** Wolfgang Prinz,Matthias Jarke,Yvonne Rogers,K. Schmidt,Volker Wulf,2007-05-08 Schmidt and Bannon (1992) introduced the concept of common information space by contrasting it with technical conceptions of shared information: Cooperative work is not facilitated simply by the provisioning of a shared database, but rather requires the active construction by the participants of a common information space where the meanings of the shared objects are debated and resolved, at least locally and temporarily. (Schmidt and Bannon, p. 22) A CIS, then, encompasses not only the information but also the practices by which actors establish its meaning for their collective work. These negotiated understandings of the information are as important as the availability of the information itself: The actors must attempt to jointly construct a common information space which goes beyond their individual personal information spaces. . . . The common information space is negotiated and established by the actors involved. (Schmidt and Bannon, p. 28) This is not to suggest that actors' understandings of the information are identical; they are simply "common" enough to coordinate the work. People understand how the information is relevant for their own work. Therefore, individuals engaged in different activities will have different perspectives on the same information. The work of maintaining the common information space is the work that it takes to balance and accommodate these different perspectives. A "bug" report in software development is a simple example. Software developers and quality assurance personnel have access to the same bug report information. However, access to information is not sufficient to coordinate their work.

**Machines That Become Us** James E. Katz, 2017-07-28 Social critics and artificial intelligence experts have long prophesized that computers and robots would soon relegate humans to the dustbin of history. Many among the general population seem to have shared this fear of a dehumanized future. But how are people in the twenty-first century actually reacting to the ever-expanding array of gadgets and networks at their disposal? Is computer anxiety a significant problem, paralyzing and terrorizing millions, or are ever-proliferating numbers of gadgets being enthusiastically embraced? Machines

that *Become Us* explores the increasingly intimate relationship between people and their personal communication technologies. In the first book of its kind, internationally recognized scholars from the United States and Europe explore this topic. Among the technologies analyzed include the Internet, personal digital assistants (PDAs), mobile phones, networked homes, smart fabrics and wearable computers, interactive location badges, and implanted monitoring devices. The authors discuss critical policy issues, such as the problems of information resource access and equity, and the recently discovered digital dropouts phenomena. The use of the word *become* in the book's title has three different meanings. The first suggests how people use these technologies to broaden their abilities to communicate and to represent themselves to others. Thus the technologies become extensions and representatives of the communicators. A second sense of *become* applies to analysis of the way these technologies become physically integrated with the user's clothing and even their bodies. Finally, contributors examine fashion aspects and uses of these technologies, that is, how they are used in ways becoming to the wearer. The conclusions of many chapters are supported by data, including ethnographic observations, attitude surveys and case studies from the United States, Britain, France, Italy, Finland, and Norway. This approach is especially valuable

**Handbook of Mobile Communication Studies** James Everett Katz, 2008 This volume offers a view of the cultural, interpersonal and family consequences of mobile communication across the globe. The contributors analyse the effects of mobile communications on all aspects of life, from the relationship between literacy and the textual features of phones, to the use of ringtones as a form of social exchange.
