

We Are A Product Of Our Environment

The Collected Works of J. Krishnamurti Jiddu Krishnamurti, J. Krishnamurti, 1991 In this volume, Krishnamurti takes great care to elucidate this necessity of a revolution within our consciousness where the problem lies before we expect any kind of revolutionary change outside of ourselves. Krishnamurti posits that if the politicians and scientists wanted to end starvation in the world it could be done. It could be done, but they are not going to do it as long as their thinking is based on nationalism, on motives of their own personal profit. And even if this far-reaching outward change were brought about, it seems to me that the problem is much deeper. The problem is not merely starvation, war, the brutality of man to man; it is the crisis in our own consciousness. Fundamentally the problem lies within. (p. 295)

Transformation Products of Synthetic Chemicals in the Environment Alistair Boxall, 2009-09-22 When a synthetic chemical is released into the environment it may be degraded by abiotic and biotic processes. These degradation processes usually involve a cascade of reactions resulting in the formation of a number of transformation products. While we usually know a great deal about the environmental properties, fate and effects of parent synthetic chemicals, our understanding of the impacts of transformation products is much less developed. As such, this volume brings together chapters from leading researchers in the field of transformation products in the environment and describes how these products are formed, how they move through the environment, and their environmental effects. The book also presents modelling and analytical approaches for understanding the occurrence, fate and effects of transformation products in the environment. It is of interest to scientists in academia, the chemicals industry and regulators, as well as graduate students in Environmental Chemistry and Ecotoxicology.

The Design of Science, Evolution, the Environment, and Redemption Jim Keck, 2022-07-18 Don't send your kids off to college without this book, especially if they will be engaged in the sciences or philosophy. The Design of Science, Evolution, the Environment, and Redemption will clarify the differences, scientific basis, and logical foundation for the two most dominating and competing worldviews we have adopted in western society nowadays—namely science and religion. After reading this book, you will be able to better understand, articulate, and defend what you believe and why. As a society in general, we need to understand the basis of our morality and culture, and how science and religion each have a role to play. Just a few of the types of questions answered are: Is there really competition and conflict between science and religion? What

is the technological and philosophical scope of science? How does our worldview affect the development of morality and virtue, both individually and collectively? Do we really need to be concerned about global environmental changes? Which type of worldview does the best job of providing answers to the tough questions on origin, purpose, environmental issues, morality, government, and eternity? Is a belief in God and the Bible part of the evolutionary process? Written by a mechanical engineer with more than thirty years of design and R&D experience, *The Design of Science, Evolution, the Environment, and Redemption* lays out in a clear, concise, easy-to-read, and entertaining manner much of the science, logic, and data used by academia and the media to answer life's toughest questions as compared to the biblical Judeo-Christian tradition. This book explores how we can measure the truthfulness, accuracy, and scope of these worldviews and how they can affect us personally, spiritually, and culturally. The answers are logically, spiritually, and technically robust, as well as just plain surprising in many ways.
