ADI-R autism diagnostic interview revised Michael Rutter, Ann Le Couteur, Catherine Lord, Raffaella Faggioli, 2005

Progettato per essere usato in combinazione con uno strumento parallelo di osservazione, l'Autism Diagnostic Observation Schedule (ADOS), l'ADI-R è un'intervista ad ampio raggio finalizzata ad ottenere una gamma completa di informazioni per la diagnosi di autismo e per valutare i disturbi dello spettro autistico (DSA). Si tratta di un modo altamente standardizzato e sistematico di utilizzare le descrizioni raccolte riguardo al comportamento di un soggetto nell'intero corso della sua vita, affinché sia possibile determinare se il suo percorso di sviluppo e le caratteristiche del suo comportamento soddisfano o meno i criteri della diagnosi di autismo o DSA. L'intervista è rivolta ai genitori o agli educatori di soggetti dalla prima infanzia all'età adulta, con un'età mentale al di sopra dei 2 anni.

Clinical Assessment of Child and Adolescent Personality and Behavior Paul J. Frick, Christopher T. Barry, Randy W. Kamphaus, 2009-12-12 Psychologists offer an increasing variety of services to the public. Among these services, psychological assessment of personality and behavior continues to be a central activity. One main reason is that other mental health professionals often do not possess a high level of competence in this area. And when dealing with children and adolescents, psychological assessment seems to take on an even greater role. Therefore, it follows that comprehensive graduate-level instruction in assessment should be a high priority for educators of psychologists who will work with these youth. This textbook is organized into three sections, consistent with the authors' approach to teaching. Part I provides students with the psychological knowledge base necessary for modern assessment practice, including historical perspectives, measurement science, child psychopathology, ethical, legal, and cultural issues, and the basics of beginning the assessment process. Part II gives students a broad review of the specific assessment methods used by psychologists, accompanied by specific advice regarding the usage and strengths and weaknesses of each method. In Part III, we help students perform some of the most sophisticated of assessment practices: integrating and communicating assessment results and infusing assessment practice with knowledge of child development and psychopathology to assess some of the most common types of behavioral and

emotional disorders in youth. A text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development. For example, several of the major tests reviewed in the text, such as the Behavioral Assessment System for Children and the Child Behavior Checklist, have undergone major revisions since the publication of the last edition making the current content outdated. Further, another major test, the Conners' Rating Scales, is undergoing substantial revisions that should be completed before publication of the next edition. Finally, the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current. For example, there was a special issue of the Journal of Clinical Child and Adolescent Psychology published focusing on evidenced-based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in Part 3. This latter point reflects an important trend in the field that should influence the marketing of the book. That is, there are several initiatives being started in all of the major areas of applied psychology (e.g., school, clinical, and counseling) to promote evidenced-based assessment practices. These initiatives have all emphasized the need to enhance the training of graduate students in this approach to assessment. This has been the orientation of this textbook from its first edition: that is, Clinical Assessment of Child and Adolescent Personality and Behavior has focused on using research to guide all recommendations for practice. The ability of the textbook to meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology.

Autism Spectrum Disorders Megan Moore Duncan, Jeanne Holverstott, Brenda Smith Myles, Terri Cooper Swanson, 2007-09-30 With the increased number of children being diagnosed with Autism Spectrum Disorders, parents and professionals are in search of materials that provide information that will enable them to better understand affected children. While in the past individuals who were diagnosed had limited verbal and intellectual skills, newly diagnosed children often have good language skills and even areas of giftedness. This A-to-Z work contains original entries on the topic of Autism Spectrum Disorders. Entries include facts about disabilities, personal and historic perspectives, interventions, assessments, educational methods, trusted internet resources, and national organizations. The work outlines the contributions of founding researchers and other professionals and includes personal perspectives from individuals with ASD and their parents. It also includes lesson plans that can be implemented in a home, school, or community setting. No other such definitive resource exists that provides both educational and practical information related to ASD.

Objective Biometric Methods for the Diagnosis and Treatment of Nervous System Disorders Elizabeth B. Torres, 2018-06-29 Objective Biometric Methods for the Diagnosis and Treatment of Nervous System Disorders provides a new and unifying methodological framework, introducing new objective biometrics to characterize patterns of sensory motor control underlying symptoms. Its goal is to radically transform the ways in which disorders of the nervous system are currently diagnosed, tracked, researched and treated. This book introduces new ways to bring the laboratory to the clinical

setting, to schools and to settings of occupational and physical therapy. Ready-to-use, graphic user interfaces are introduced to provide outcome measures from wearable sensors that automatically assess in near real time the effectiveness of interventions. Lastly, examples of how the new framework has been effectively utilized in the context of clinical trials are provided. - Provides methods and their implementation using real data and simple computer programs that students and researchers from less technically trained fields can use - Describes the motivation for methods according to the problem domain in light of existing methods for each chapter, along with their lack of neuroscientific foundation and invalid statistical assumptions - Accompanied by a companion website which contains Appendices with MATLAB codes and data samples to generate the graphics displayed in all chapter figures - Features videos illustrating the experimental set up for scenarios and methods described in each chapter - Includes step-by-step explanations of paradigms in each clinical or typical sample population to enable reproducibility of the study across different clinical phenotypes and levels of expertise in sports, the performing arts, or mere individual academic predispositions/preferences

The Cross Cultural Examination of a Brief Autism Diagnostic Interview (ADI-R) in Korea and The United States Elizabeth Lally Daley, 2013 Autism is the fastest growing developmental disability in the United States; as many as 1 in 88 individuals have been identified with an Autism Spectrum Disorder (ASD) (Centers for Disease Control and Prevention [CDC], 2010). Although scientists are working on understanding how many people in the population have autism, there is a limited amount of focus on the identification of any cultural factors that may influence people's understanding about autism, attitudes about autism, and reporting of symptoms. The accepted methods for diagnosing autism are the Autism Diagnostic Observation Schedule (ADOS) and the Autism Diagnostic Interview-Revised (ADI-R). This study seeks to develop a brief version of the ADI-R using Item Response Theory with a Korean sample of school aged children divided into two groups based on age and language ability. The specific items from the Brief Korean Autism Diagnostic Interview (KBADI) are compared to the Korean translated ADI-R scoring algorithms, which were originally derived in the United States, in order to give some insight into any cultural differences. This study aims to identify any Korean cultural influences that may play a role in the parent or caregiver's reporting of autism symptoms

Clinician's Handbook of Child Behavioral Assessment Michel Hersen, 2011-04-28 Given the vast amount of research related to behavioral assessment, it is difficult for clinicians to keep abreast of new developments. In recent years, there have been advances in assessment, case conceptualization, treatment planning, treatment strategies for specific disorders, and considerations of new ethical and legal issues. Keeping track of advances requires monitoring diverse resources limited to specific disorders, many of which give short shrift to child assessment, overlooking developmental considerations. Much of the existing literature is either theoretical/research in focus or clinical in nature. Nowhere are the various aspects of child

behavioral assessment placed in a comprehensive research/clinical context, nor is there much integration as to conceptualization and treatment planning. The Clinician's Handbook of Child Behavioral Assessment was created to fill this gap, summarizing critical information for child behavioral assessment in a single source. The Clinician's Handbook of Child Behavioral Assessment provides a single source for understanding new developments in this field, cutting across strategies, techniques, and disorders. Assessment strategies are presented in context with the research behind those strategies, along with discussions of clinical utility, and how assessment and conceptualization fit in with treatment planning. The volume is organized in three sections, beginning with general issues, followed by evaluations of specific disorders and problems, and closing with special issues. To ensure cross chapter consistency in the coverage of disorders, these chapters are formatted to contain an introduction, assessment strategies, research basis, clinical utility, conceptualization and treatment planning, a case study, and summary. Special issue coverage includes child abuse assessment, classroom assessment, behavioral neuropsychology, academic skills problems, and ethical-legal issues. Suitable for beginning and established clinicians in practice, this handbook will provide a ready reference toward effective child behavioral assessment.

Other sections discuss all contemporary diagnostic and therapeutic modalities. Chapters include case histories, algorithms, tables, and appendices that explain the rudiments of testing.
