E Durkheim

Analisi dei sistemi dinamici Alessandro Giua, Carla Seatzu, 2009-11-25 Questo testo si propone di fornire al lettore una panoramica dettagliata delle principali metodologie modellistiche usate per la rappresentazione e l'analisi dei sistemi dinamici lineari e a tempo continuo (con alcuni cenni ai sistemi non lineari). Il testo è stato pensato per il Nuovo Ordinamento didattico che prevede una Laurea triennale e una Laurea Specialistica biennale. L'obiettivo è quello di coprire i contenuti di: un insegnamento introduttivo all'Automatica per la Laurea, pensando ad un corso di studi che preveda un primo corso di Analisi dei Sistemi ed un secondo corso di Controlli Automatici; un insegnamento avanzato di Analisi dei Sistemi per la Laurea Specialistica. Il testo è strutturato in maniera tale che gli studenti della Laurea possano seguire un percorso in cui nei primi capitoli le sezioni dedicate ad argomenti complementari (rivolte agli studenti della Laurea Specialistica) possano essere omesse senza pregiudicare la comprensione. Gli argomenti rivolti agli studenti della Laurea Specialistica sono trattati in svariate sezioni di complemento dei primi capitoli e negli ultimi due capitoli. Le caratteristiche salienti di questo testo, che lo distinguono da altri presenti nel panorama italiano, sono le seguenti: si tratta di un volume di circa 400 pagine principalmente dedicato all'analisi dei sistemi lineari e stazionari a ciclo aperto (e non dei sistemi in controreazione o in genere dei sistemi di controllo) e a tempo continuo (e non dei sistemi a tempo discreto). Due capitoli, tuttavia, approfondiscono lo studio dei sistemi in retroazione e dei sistemi non lineari. Vengono studiati in dettaglio sia i modelli ingresso-uscita sia i modelli in termini di variabili di stato. Vengono illustrate in dettaglio sia le tecniche di analisi nel dominio del tempo che le tecniche di analisi nel dominio della variabile di Laplace e della frequenza.

Elettronica Analogica. Approfondimenti Leopoldo Rossetto, 2019-07-01 Questa raccolta di appunti è nata e si è via via arricchita dai vari momenti di dialogo che ho avuto con gli studenti nei miei 20 anni di attività di docente sempre alla ricerca di migliorare la comprensione dei vari argomenti dell'elettronica analogica. Non volevo riproporre qui una trattazione di argomenti generali che si possono già trovare in tantissimi testi di elettronica. Ho invece preferito mettere alla prova le conoscenze sviluppate dagli studenti, spesso tradizionalmente confinate intorno a un singolo preciso argomento, utilizzandole nell'analisi di situazioni molto diverse. Ne è un particolare esempio il Capitolo dedicato al Teorema di Miller, la cui trattazione nei vari libri di testo è spesso contenuta all'interno di una singola pagina, che in questi appunti si integra con la teoria della retroazione e col metodo delle costanti di tempo in un continuo creare e dissolvere dubbi. I primi capitoli sono

invece dedicati all'ottenimento di rappresentazioni chiaramente definite e affidabili dei circuiti elettronici. Ampio spazio è concesso alla rappresentazione dei circuiti in termini di schematizzazione a blocchi e ai punti critici sui quali porre attenzione affinché l'algebra degli schemi a blocchi possa essere utilizzata per lo studio di stadi amplificatori in cascata. In particolare viene presa in considerazione la "funzione di trasferimento di interfaccia" che si crea nel momento in cui si connettono due circuiti e le nascoste problematiche di stabilità che possono essere chiaramente correlate ad essa. L'uso di metodi di indagine alternativi a quelli tradizionalmente noti permette di mettere in luce aspetti non sempre evidenti e spesso lasciati involontariamente sottintesi quando si utilizzano i procedimenti tradizionali. Suggerisco sempre ai miei studenti di studiare un determinato argomento su più libri in quanto ogni autore lo descrive con parole proprie, propone considerazioni differenti e le differenze aiutano a capire ciò che stiamo studiando. Spero quindi che questi appunti possano soprattutto stimolare momenti di riflessione e di verifica delle conoscenze che pensiamo di possedere nel campo dell'elettronica analogica e aiutarci a farne di nuove.
