Engineering Research Methodology Dipankar Deb,Rajeeb Dey,Valentina E. Balas,2018-12-14 The book covers all the important aspects of research methodology, and addresses the specific requirements of engineering students, such as methods and tools, in detail. It also discusses effective research in engineering today, which requires the ability to undertake literature reviews utilizing different online databases, to attribute credit for any prior work mentioned, to respect intellectual property rights while simultaneously maintaining ethics in research, and much more. Further, the book also considers soft skills like research management and planning, dealing with criticism in research and presentation skills, which are all equally important and need to include in research methodology education. Lastly, it provides the technical knowhow needed to file patents in academia, an important area that is often ignored in research methodology books. The book is a particularly valuable resource for PhD students in India and South East Asia, as research methodology is a part of their coursework.

TECHNICAL WRITING BASU, B.N.,2007-12-29 This book deals with technical writing with an emphasis on how to write a thesis for a university degree or a research paper for publication in a journal. It teaches students, step by step through several examples, how to plan, organize, draft, develop and prepare such a document for presentation. The book gives, besides usage in grammar, a precise method of preparing a document simply, clearly and concisely, organizing it by going into the details of its front matter, main text and end matter and its subdivisions, without missing the finer details like figures, tables, equations, references, etc. It describes how to compile and locate the original sources and view the specific topic to be researched in the background of earlier contributions. It addresses issues related to identifying such authors and their writings through their names and affiliations, and abstracts of the work, etc. Some peripheral issues such as certificate and copyright have also been discussed. The book will be useful to students, engineers and scientists alike, helping them

break the ice by removing their confusion, bewilderment and hesitation in technical writing. It would be a boon to the beginners, as it would help them understand quickly many of the steps of the technique of technical writing instead of learning the hard way from long experience, which the author has shared in this book with the prospective readers.

Supervising the PhD Sara Delamont,Paul Atkinson,Odette Parry,1997 This book provides everything you ever wanted to know about PhD supervision but were afraid to ask! It is a practical, no-nonsense handbook for both the novice and the experienced higher degree supervisor. The novice will find a developmental sequence of advice, guiding them through all the stages of supervision from the first meeting to viva and beyond. The experienced supervisor will find fresh ideas to improve practice and solve problems. Based both on research among laboratory scientists and social scientists and on many years of experience, the book also draws upon humanities examples and so is invaluable to academics in all disciplines. At a time when there is increasing pressure to ensure 'quality' provision, to improve the PhD completion rate, and to turn out employable graduates, the need for this practical guide is obvious.

Chinese PhD Thesis Acknowledgements Hua Peng,2010 While there is a comparatively rich research literature on English acknowledgement texts, research into Chinese PhD thesis acknowledgement texts, especially the social roles of the texts, has received little attention. To fill this gap, this book examines a corpus of Chinese PhD thesis acknowledgement texts in order to explore both the typical structure of the texts and their social function within the particular university setting as well as within a broader social context. The author uses stratified purposive sampling and semi-structured text-based interviews with PhD graduates, their supervisors and other acknowledgee representatives to gather data. Furthermore, PhD guidebooks, supervisors' CVs and graduates' publications have been collected. Three theoretical notions - communities of practice, audience and politeness - are drawn into account for the findings of the study. Besides uncovering several undocumented move patterns, the book offers insightful understanding of acknowledgement texts both as a part-genre of research writing as well as a window of the textual and social world of PhD graduates' chorus of gratitude.
