Alasdair Urquhart on Nonclassical and Algebraic Logic and Complexity of Proofs Ivo Düntsch, Edwin Mares, 2021-09-24 This book is dedicated to the work of Alasdair Urquhart. The book starts out with an introduction to and an overview of Urquhart's work, and an autobiographical essay by Urquhart. This introductory section is followed by papers on algebraic logic and lattice theory, papers on the complexity of proofs, and papers on philosophical logic and history of logic. The final section of the book contains a response to the papers by Urquhart. Alasdair Urquhart has made extremely important contributions to a variety of fields in logic. He produced some of the earliest work on the semantics of relevant logic. He provided the undecidability of the logics R (of relevant implication) and E (of relevant entailment), as well as some of their close neighbors. He proved that interpolation fails in some of those systems. Urquhart has done very important work in complexity theory, both about the complexity of proofs in classical and some nonclassical logics. In pure algebra, he has produced a representation theorem for lattices and some rather beautiful duality theorems. In addition, he has done important work in the history of logic, especially on Bertrand Russell, including editing Volume four of Russell's Collected Papers.

Logic, Epistemology, and the Unity of Science Shahid Rahman, John Symons, Dov M. Gabbay, Jean Paul van Bendegem, 2009-03-15 The aim of the series *Logic, Epistemology, and the Unity of Science*, of which this is the first volume, is to take up anew the challenge of considering the scientific enterprise in its entirety in light of recent developments in logic and philosophy. Developments in logic are especially relevant to the current situation in philosophy of science. At present, there is no single logic, single approach to semantics or well-defined conception of scientific method dominating the philosophy of science. At the same time, questions concerning linguistic, reductionist and foundationalist approaches to epistemology, the analytic and synthetic distinction as well as disputes concerning semantics and pragmatics have been illuminated by recent developments in logic. Given the power of such developments, discussions of the unity of science are even more intriguing and urgent than in the 20th century. The first title in this new series aims to explore, through extensive co-operation, new ways of achieving the integration of science in all its diversity. The present volume contains essays from some of the most important and influential philosophers in contemporary philosophy, discussing a range of topics such as philosophy of science, epistemology, philosophy of logic and game theoretical approaches. It will be of great interest to

philosophers, computer scientists and all others interested in the scientific rationality.
