Starchy Crops Waste Valorization Marney Pascoli Cereda, Olivier Francois Vilpoux, 2025-11-17 Starchy Crops Waste Valorization: Recovery and Treatment, the fifth volume in the Underground Starchy Crops of South American Origin series, provides information on the applied level of producing and using starch from a range of plants grown in tropical and subtropical areas with South American origin. The book presents collecting information about products that are generally considered as waste and can therefore cause serious pollution problems in starch-processing industries. Edited by experts with a solid background in starch extraction research, the books in this series are aimed at anyone involved in research and development, new technology processes, quality control, and legislation. The Underground Starchy Crops of South American Origin book series brings information on the applied level of producing and using starch from a range of plants grown in tropical and subtropical areas that have South American origin. As the final volume in the series, Starchy Crops Waste Valorization: Recovery and Treatment enables stakeholders to valorize waste by transforming it into by-products that can reach the market and reduce processing costs. It also explains how to reduce or eliminate problems of environmental contamination. Residues covered are of two types: crop residues and industrial residues. - Thoroughly explores how to reduce waste and avoid environmental pollution - Presents the industrial wastes generated by raw material transformations - Includes the best use of co-products from lesser known crops as a way of valuing and protecting the environment

Textural Characteristics of World Foods Katsuyoshi Nishinari, 2020-03-09 A complete guide to the textural characteristics of an international array of traditional and special foods It is widely recognized that texture has an intrinsic relationship to food preference. A full understanding of its functions and qualities is, therefore, of crucial importance to food technologists and product developers, as well as those working towards the treatment of dysphagia. Textural Characteristics of World Foods is the first book to apply a detailed set of criteria and characteristics to the textures of traditional and popular foods from across the globe. Structuring chapters by region, its authors chart a journey through the textural landscapes of each continent's cuisines, exploring the complex and symbiotic relationships that exist between texture, aroma, and taste. This innovative text: Provides an overview of the textural characteristics of a wide range of foods Includes descriptions of textures and key points of flavor release Examines the relationships between the texture, taste, and aroma of each food presented Is structured by geographic region Rich with essential insights and important research, Textural Characteristics of World Foods

offers all those working in food science and development a better picture of texture and the multifaceted role it can play.

The Emergence of Brazil to the Global Stage Francine Rossone de Paula, 2018-03-13 How do discourses about Brazil's emergence as a global actor at the beginning of the twenty-first century reinforce particular temporal and spatial formations that enable the perpetuation of international hierarchies? This volume argues that while the phenomenon of 'emergence' was celebrated as the conquest of more authority for Brazil on the global stage, especially as Brazil was presented as a leader of developing countries, discourses about Brazil as an actor who was finally arriving at its promised future as a global player were also perpetuating a spatiotemporal structure that continues to reward some societies and individuals at the expense of many others. Brazil's success or failure has depended from the beginning on how well it would perform its pre-determined role as a newly relevant or emergent 'global player'. Power and empowerment have been conceptualized in a way that discursively inhibits any form of escape from the temporal and spatial confines of a world order marked by geopolitical and geoeconomic competition. The book can be seen as an initial step towards an exploration of alternative forms of thinking, doing, and being, temporally and spatially, that are not limited to the competition among states for geopolitical status in the international system. This work will be of great interest to students and scholars of critical international relations, international politics and Latin American studies.

Future Foods Rajeev Bhat, 2021-12-04 Future Foods: Global Trends, Opportunities, and Sustainability Challenges highlights trends and sustainability challenges along the entire agri-food supply chain. Using an interdisciplinary approach, this book addresses innovations, technological developments, state-of-the-art based research, value chain analysis, and a summary of future sustainability challenges. The book is written for food scientists, researchers, engineers, producers, and policy makers and will be a welcomed reference. - Provides practical solutions for overcoming recurring sustainability challenges along the entire agri-food supply chain - Highlights potential industrial opportunities and supports circular economy concepts - Proposes novel concepts to address various sustainability challenges that can affect and have an impact on the future generations

Biofuels in Brazil Silvio Silvério da Silva, Anuj Kumar Chandel, 2014-04-02 This book discusses the commercialization of biofuels and the Brazilian government policies for the promotion of renewable energy program in Brazil, which could be a learning module for several countries for implementing biofuels policy to improve their socioeconomic status and make them energy independent. Researchers in academia and industries, policy makers, and economic analysts will be assisted by important source of information in their ongoing research and future perspectives. This book will benefit graduate and postgraduate students of chemical and biochemical engineering, forestry, microbiology, biochemistry, biotechnology, applied chemistry, environmental science, sustainable energy, and biotech business disciplines by signifying the applied aspects of bioenergy production from various natural sources and their implications. Graduate and postgraduate students as well as

postdoctoral researchers will find clear concepts of feedstock analysis, feedstock degradation, microbial fermentation, genetic engineering, renewable energy generation and storage, climate changes, and techno-economic analysis of biofuels production technologies.
