Probability and Mathematical Statistics Mary C. Meyer, 2019-06-24 This book develops the theory of probability and mathematical statistics with the goal of analyzing real-world data. Throughout the text, the R package is used to compute probabilities, check analytically computed answers, simulate probability distributions, illustrate answers with appropriate graphics, and help students develop intuition surrounding probability and statistics. Examples, demonstrations, and exercises in the R programming language serve to reinforce ideas and facilitate understanding and confidence. The book's Chapter Highlights provide a summary of key concepts, while the examples utilizing R within the chapters are instructive and practical. Exercises that focus on real-world applications without sacrificing mathematical rigor are included, along with more than 200 figures that help clarify both concepts and applications. In addition, the book features two helpful appendices: annotated solutions to 700 exercises and a Review of Useful Math. Written for use in applied masters classes, *Probability and Mathematical Statistics: Theory, Applications, and Practice in R* is also suitable for advanced undergraduates and for self-study by applied mathematicians and statisticians and qualitatively inclined engineers and scientists.

LOGICAL MINING OF ECONOMIC MEASUREMENT Dong Qiu,Dongju Li,2019-09-04 As one of the critiques of contemporary economic statistics, this corpus mainly queries the Report by the Committee on the Measurement of Economic Performance and Social Progress headed by J.E. Stiglitz. The Report can be divided into three parts: classical GDP issues, quality of life, and sustainable development and environment. This corpus analyzes the necessity, especially the feasibility, of systematic revolution in economic measurement, and points out the logical break between measurement issues and solutions. This is a common economic measurement problem facing mankind at present, so we cannot emphasize the quantitative analysis of empirical evidence while are extremely contemptuous of the basis of economic statistics. Otherwise, the data obtained from the deeper model will lose its real and clear economic significance, which is a common fault of contemporary economics, and economic statistics has great potential. This corpus is suitable for those who are engaged in or interested in empirical analysis of economic statistics. It can be read by postgraduates and undergraduates majoring in economics and management. It can also be used as a reference for teachers engaged in economics teaching.

**Mechanizing Hypothesis Formation** Jan Rauch,Milan Šimůnek,David Chudán,Petr Máša,2022-10-20 Mechanizing hypothesis formation is an approach to exploratory data analysis. Its development started in the 1960s inspired by the question “can computers formulate and verify scientific hypotheses?”. The development resulted in a general theory of logic of discovery. It comprises theoretical calculi dealing with theoretical statements as well as observational calculi dealing with observational statements concerning finite results of observation. Both calculi are related through statistical hypotheses tests. A GUHA method is a tool of the logic of discovery. It uses a one-to-one relation between theoretical and observational statements to get all interesting theoretical statements. A GUHA procedure generates all interesting observational statements and verifies them in a given observational data. Output of the procedure consists of all observational statements true in the given data. Several GUHA procedures dealing with association rules, couples of association rules, action rules, histograms, couples of histograms, and patterns based on general contingency tables are involved in the LISp-Miner system developed at the Prague University of Economics and Business. Various results about observational calculi were achieved and applied together with the LISp-Miner system. The book covers a brief overview of logic of discovery. Many examples of applications of the GUHA procedures to solve real problems relevant to data mining and business intelligence are presented. An overview of recent research results relevant to dealing with domain knowledge in data mining and its automation is

provided. Firsthand experiences with implementation of the GUHA method in the Python language are presented.
