The Right Price Peter J. Neumann, Joshua T. Cohen, Daniel A. Ollendorf, 2021 The US prescription drug business is a \$500 billion industry whose rising prices carry profound consequences for patients, caregivers, employers and taxpayers across the nation. In the United States, average prices of leading brand-name drugs are two to four times higher than prices charged in other wealthy countries, raising questions as to what Americans are getting for the extra expense. On the other hand, healthy industry returns have arguably fueled life-saving innovation. With the advent of ever more targeted and powerful treatments, including cell- and gene-based therapies with multi-million-dollar price tags, the need for sensible drug pricing policies will only intensify. The Right Price sheds light on the controversial topic of drug pricing by providing an accessible guide to pharmaceutical markets and analytic techniques used to measure the value of drug therapies. It illustrates the need for value-based pricing through real-life stories of patients and their experiences with the drug industry and explains why simple solutions like price controls and the importation of cheaper drugs from other countries are problematic. This volume describes how researchers and policy makers have pursued drug valuation efforts in the past, and lays out a series of recommendations, based on years of shared author experience serving on national drug policy platforms, for how to further improve pharmaceutical value assessment in the United States. With unique industry insights and clear narrative, The Right Price unveils why the pricing of drugs continues to be so challenging and how public and private officials can create more informed policies to achieve the right balance between drug pricing and value.

Institutions and Incentives in Regulatory Science Jason Scott Johnston, 2012-04-12 Institutions and Incentives in Regulatory Science explores fundamental problems with regulatory science in the environmental and natural resource law field. Each chapter covers a variety of natural resource and regulatory areas, ranging from climate change to endangered species protection and traditional health-based environmental regulation. Regulatory laws and institutions themselves strongly influence the direction of scientific research by creating a system of rewards and penalties for science. As a consequence, regulatory laws or institutions that are designed naively end up incentivizing scientists to generate and then

publish only those results that further the substantive regulatory goals preferred by the scientists. By relying so heavily on science to dictate policy, regulatory laws and institutions encourage scientists to use their assessment of the state of the science to further their own preferred scientific and regulatory policy agendas. Additionally, many environmental and natural resource regulatory agencies have been instructed by legislatures to rely heavily upon science in their rulemaking. In areas of rapidly evolving science, regulatory agencies are inevitably looking for scientific consensus prematurely, before the scientific process has worked through competing hypotheses and evidence. The contributors in this volume address how institutions for regulatory science should be designed in light of the inevitable misfit between the political or legal demand for regulatory action and the actual state of evolving scientific knowledge.

Championing Science Roger D. Aines, Amy L. Aines, 2019-01-22 *Championing Science* shows scientists how to persuasively communicate complex scientific ideas to decision makers in government, industry, and education. This comprehensive guide provides real-world strategies to help scientists develop the essential communication, influence, and relationship-building skills needed to motivate nonexperts to understand and support their science. Instruction, interviews, and examples demonstrate how inspiring decision makers to act requires scientists to extract the essence of their work, craft clear messages, simplify visuals, bridge paradigm gaps, and tell compelling narratives. The authors bring these principles to life in the accounts of science champions such as Robert Millikan, Vannevar Bush, scientists at Caltech and MIT, and others. With *Championing Science*, scientists will learn how to use these vital skills to make an impact.

The Laws of Medicine Siddhartha Mukherjee, 2015-10-08 *The Laws of Medicine* follows Pulitzer-Prize-winning author, Dr Mukherjee as he investigates some of the most perplexing and illuminating cases of his career - the cases that ultimately led him to identify the three key principles that govern medicine. As a young medical student, Mukherjee discovered *The Youngest Science*, a book that changed the way he understood the medical profession and forced him to ask himself an urgent, fundamental question: Is medicine a 'science'? Science must have laws - statements of truth based on repeated experiments that describe some universal attribute of nature. Dr Mukherjee has spent his career pondering whether the 'youngest science' has laws like the other sciences, culminating in this treatise *The Laws of Medicine*. Law 1: Rumours are more important than tests. Law 2: The piece of data that does not fit your model is the most crucial piece of data that you own. Law 3: For every perfect medical experiment, there is a perfect human bias. Brimming with fascinating historical details and modern medical wonders, this book is a glimpse into the struggles and Eureka! moments rarely seen by those outside the profession.

El emperador de todos los males Siddhartha Mukherjee, 2014-06-19 En 2010, siete millones de personas murieron de cáncer en todo el mundo. Con esta fría estadística Siddhartha Mukherjee, médico e investigador oncológico, arranca su amplia y absorbente «biografía», ganadora del Premio Pulitzer, de una de las enfermedades más extendidas de nuestro

tiempo. El emperador de todos los males es una crónica completa del cáncer desde sus orígenes hasta los modernos tratamientos (quimioterapia de diversos tipos, radioterapia y cirugía, además de la prevención) que han surgido gracias a un siglo de investigación, ensayos y pequeños avances trascendentales en muchos lugares distintos. Este libro es un repaso a la ciencia del cáncer y a la historia de los tratamientos que le han hecho frente, pero también es una reflexión sobre la enfermedad, la ética médica y las complejas y entrelazadas vidas de los oncólogos y sus pacientes. La empatía que muestra Mukherjee hacia los enfermos de cáncer y sus familias, así como hacia los médicos que muy a menudo tan pocas esperanzas les pueden ofrecer, hacen de este libro una historia llena de humanidad de una enfermedad compleja e insalvable. Reseñas: «Esta obra debería valer a Mukherjee un merecido lugar en el panteón de los grandes divulgadores de nuestra era, junto a Carl Sagan, Stephen Jay Gould y Stephen Hawking.» The Boston Globe «Una magistral historia de la investigación sobre el cáncer.» Publishers Weekly
