The Sage Encyclopedia of Mood and Anxiety Disorders Dara G. Friedman-Wheeler, Amy Wenzel, 2024-10-24 Courses in psychological distress and disorders are among the most popular courses in psychology programs, and mood and anxiety disorders are among the most prevalent disorders covered in these classes and encountered by mental health professionals. Although there are books on mood and anxiety disorders, on particular aspects of them, and on their presentation in specific populations, such works do not provide students new to the field with a comprehensive and accessible ready reference for understanding these disorders with respect to their phenomenology, etiology, and treatment, and through an inclusive lens that consistently considers how these symptoms appear and are construed across cultures, addressing societal factors such as race, culture, equity, and oppression. It is hoped that The SAGE Encyclopedia of Mood and Anxiety Disorders will fill this gap, allowing students and other interested readers to become familiar with past and current approaches and theories and to enhance their understanding of the sociocultural factors that affect how we discuss, approach, and treat these types of psychological distress. As such, consideration of sociocultural factors will infuse the three-volume set. The encyclopedia will consist of approximately 450 entries (essays), arranged alphabetically within three volumes.

The Cambridge Handbook of Anxiety and Related Disorders Bunmi O. Olatunji, 2019-01-03 This Handbook surveys existing descriptive and experimental approaches to the study of anxiety and related disorders, emphasizing the provision of empirically-guided suggestions for treatment. Based upon the findings from the Diagnostic and Statistical Manual of Mental Disorders (DSM-5), the chapters collected here highlight contemporary approaches to the classification, presentation, etiology, assessment, and treatment of anxiety and related disorders. The collection also considers a biologically-informed framework for the understanding of mental disorders proposed by the National Institute of Mental Health's Research Domain Criteria (RDoC). The RDoC has begun to create a new kind of taxonomy for mental disorders by bringing the power of modern research approaches in genetics, neuroscience, and behavioral science to the problem of mental illness. The framework is a key focus for this book as an authoritative reference for researchers and clinicians.

Persistent Depressive Disorder J. Kim Penberthy, 2019-05-14 This compact guide is packed with the latest knowledge on the assessment and treatment of persistent depressive disorders (PDDs) – the new DSM-5 diagnosis that amalgamates the categories dysthymic disorder (DD), chronic major depression (MDD), and DD with major depressive episode (MDE). Written by a leading expert, the book guides us through the complexities of assessing PDDs and the models for understanding how

these difficult to identify and potentially life-threatening disorders develop and are maintained over long periods. It then outlines those therapies that have the strongest evidence base. The author goes on to explore in detail the cognitive behavioral analysis system of psychotherapy (CBASP), a treatment specifically developed for PDDs. This compelling integrated approach incorporates components of learning, developmental, interpersonal, and cognitive theory with aspects of interpersonal mindfulness. We are led expertly through the therapeutic process using clinical vignettes and practical tips, with particular attention paid to identifying the assessment and therapy methods most valuable in CBASP. Printable tools in the appendices can be used in daily practice. This book is of interest to clinical psychologists, psychotherapists, psychiatrists, counsellors, and students.

Eating Disorders Paul Robinson, Tracey Wade, Beate Herpertz-Dahlmann, Fernando Fernandez-Aranda, Janet Treasure, Stephen Wonderlich, 2024-12-20 This Handbook covers all eating disorders in every part of the world. Eating disorders in Western countries are described but also in different parts of Asia, Africa, the Middle East, amongst indigenous peoples, and peoples of cultural and linguistic diversity, Latin America and Eastern Europe and we will describe the impact of pandemics. The sections are organised with an introduction followed by definitions and classifications, then epidemiology, then psychosocial aetiology, clinical features, neurobiology, family peers and carers, and finally conclusions. The latest DSM and ICD classifications are covered and eating disorders not yet classified. The authors cover the clinical features of eating disorders complicating diabetes type 1, the neurobiology of eating disorders including immunology, neurotransmitters and appetite. The treatment section will include emergency treatment, evidence-based psychological approaches, intensive interventions and emerging areas, and the family section will include voluntary bodies, family and carers and pregnant mothers with eating disorders. Outcome covers prognosis in all the major eating disorders and describe the severe and enduring type of eating disorder. The work is the primary source of information about eating disorders for students, doctors, psychologists and other professionals. The fact that it is regularly updated makes it second only to primary sources such as journals for retrieving information on the subject. In contrast to journals the manual will provide accessibility unavailable elsewhere.

Anxiety in Older People Gerard J. Byrne, Nancy A. Pachana, 2021-03-25 Historically, clinicians and researchers have focused on depression and dementia in older people, paying little attention to anxiety except as a complication of these disorders. However, increased research into late-life anxiety has seen a growth in scientific literature and clinical interest. This important book brings together international experts to provide a comprehensive overview of current knowledge in relation to anxiety in older people, highlighting gaps in both theory and practice, and pointing towards the future. Early chapters cover the broader aspects of anxiety disorders, including epidemiology, risk factors, diagnostic issues, association with insomnia, impaired daily functioning, suicidality, and increased use of healthcare services. The book then explores

cross-cultural issues, clinical assessment, and pharmacological and psychological interventions across a variety of settings. An invaluable resource for mental health professionals caring for older people including researchers, psychiatrists, psychologists, specialist geriatric nurses and social workers.

As the chapter progresses, the pertinent diseases are reviewed. Just as in real life, the case unfolds in a stepwise fashion as tests are performed and diagnoses are confirmed or refuted. Completely updated to reflect the latest research in clinical medicine, this fourth edition is enhanced by algorithms, summary tables, questions that direct evaluation, and an examination of recently developed diagnostic tools and guidelines. Clinical pearls are featured in every chapter. Coverage for each disease includes: Textbook Presentation, Disease Highlights, Evidence-Based Diagnosis, and Treatment.

Criminalité et troubles mentaux Angéline Artus,2023-03-29 La criminalité est un sujet qui fascine tandis que celui des troubles mentaux demeure, lui, peu connu du grand public. En découle une regrettable stigmatisation des personnes qui en sont atteintes. Beaucoup pensent, à tort, qu'elles sont des plus dangereuses au sein d'une société. La recherche de l'éventuelle influence des troubles mentaux sur la criminalité contribue in fine à la déstigmatisation des malades. En effet, les différentes études de sociologie criminelle abordées démontrent que la plupart des passages à l'acte sont dus à des situations de précarité et de misère sociale. Un sujet que l'État a tout intérêt à placer au coeur de ses priorités politiques. Un hommage, enfin, à ceux qui luttent chaque jour contre les affres de la maladie mentale ainsi qu'à leur famille.

La psychothérapie des obsessionnels compulsifs - Tome 1 Claude Michel, 2016-09-15 Les Toc (Troubles Obsessionnels compulsifs) touchent 3% de la population. C’est le quatrième motif de consultation psychopathologique. L’auteur construit un modèle théorique intégrant des éléments de la psychanalyse, de la thérapie comportementale et cognitive, de la PNL et de l’ethnopsychiatrie pour élaborer une problématique centrée sur l’agressivité. Pour lui, le blocage de l’agressivité, lorsqu’il entraîne un processus d’isolation, génère de nombreux symptômes contraignants et invalidants. L’auteur propose également une démarche thérapeutique plurielle visant simultanément à éteindre ces symptômes et à restaurer l’affirmation de soi et la possibilité d’une saine confrontation à autrui.
