Chemical Nomenclature K. J. Thurlow,1998 A general introduction to forms of chemical nomenclature dealing with systematic and trivial names. Chapters are included on specialized naming systems for polymers and natural products and on the role of computers and the quest to find a quick and accurate naming program.

The Etymology of Chemical Names ,2019-10-08 Etymology of Chemical Names gives an overview of the development of the current chemical nomenclature, tracing its sources and changing rules as chemistry progressed over the years. This book is devoted to provide a coherent picture how the trivial and systematic names shall be used and how the current IUPAC rules help to reconcile the conflicting demands.

A New Chemical Nomenclature Samuel Dyer Tillman, 2025-05-22 A new Chemical Nomenclature provides a guide to the systematic naming of chemical compounds. Intended for students and professionals in chemistry and related fields, this book offers clear explanations and examples of the principles and rules governing chemical nomenclature. It assists readers in understanding and applying the correct naming conventions, ensuring clarity and accuracy in scientific communication. This resource is valuable for anyone seeking to master the standardized language of chemistry. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Chemical Nomenclature K J Thurlow, 1999-01-31 Chemical nomenclature can be a complicated subject. As a result, most works on the subject are rather dry textbooks and primarily consist of sets of instructions on how to name chemicals. This practical book proves that chemical nomenclature can be interesting, not just a necessary evil'. Written in a lively and engaging style by experts in their particular fields, this new book provides a general discussion on why good, clear nomenclature is needed. It introduces the reader to the various forms of nomenclature without reading like a textbook. Both systematic' and trivial' nomenclature systems are used widely (and interchangeably) in chemistry and this new book covers both areas. For example, systematic nomenclature in both the CAS and IUPAC styles is introduced. These systems have many similarities but important differences which the chemist should be aware of. Specialized naming systems are needed for polymers and natural products and these areas are covered in separate chapters. The naming of elements is a very topical subject at the moment and so this is included to ensure a comprehensive coverage. Covering a wide range of topics in the area of nomenclature and acting as an introduction to a varied field, this book will be of interest to industrial chemists as well as students at senior undergraduate and postgraduate level.
