Questionnaires et échelles d'évaluation de la personnalité Martine Bouvard, 2024-10-28 Cette quatrième édition marque un tournant dans l'évaluation de la personnalité pathologique. En effet, l'évaluation catégorielle des troubles de la personnalité a montré ses limites au profit d'une approche dimensionnelle. Le modèle alternatif du DSM-5-TR et la CIM-11 retiennent chacun cinq domaines de traits de personnalité pathologique. Quatre de ces domaines sont comparables et représentent des versants pathologiques des Big Five. Ils divergent sur la cinquième dimension (psychoticisme versus anankastie). Aussi les outils d'évaluation des critères diagnostiques dimensionnels ont-ils été intégrés dans cette édition. Des travaux de recherche sont encore attendus en vue d'établir un consensus sur le nombre de dimensions de la personnalité pathologique. Cette édition présente vingt-cinq nouveaux outils dont la majorité a été étudiée sur une population francophone. Les études sur les outils maintenus ont été actualisées. Si l'évaluation de la personnalité et de ses troubles est reconnue depuis longtemps comme indispensable à la bonne prise en charge des patients, le partage des informations recueillies avec les outils d'évaluation empiriquement validés permet aussi au patient d'être un acteur de son changement et participe au rapport collaboratif établi avec le thérapeute. Cette nouvelle édition, importante, était donc nécessaire pour tous les praticiens, psychiatres, psychologues et psychothérapeutes. Martine Bouvard, professeure émérite, psychologue, psychothérapeute, laboratoire de Psychologie et NeuroCognition (LPNC), université Savoie Mont Blanc.

Personality and Brain Disorders Danilo Garcia, Trevor Archer, Richard M. Kostrzewa, 2019-05-21 Brain disorders (neurodevelopmental, neurodegenerative, and affective disorders) can be investigated, treated, and prevented using person-centered methods. Because researchers have not reached a clear consensus on whether or not personality is stable or changeable, it has been difficult to outline how to use these methods in the care of people with brain disorders. Thus, the first part aims to identify the ways in which brain disorders and personality are linked. The second part explores different

person-centered approaches that can be incorporated in a healthcare or education setting to help people with various brain disorders and to promote physical, mental and social health. The third part focuses on challenges and new venues.

Psychometrics and Psychological Assessment Carina Coulacoglou, Donald H. Saklofske, 2017-06-19 Psychometrics and Psychological Assessment: Principles and Applications reports on contemporary perspectives and models on psychological assessment and their corresponding measures. It highlights topics relevant to clinical and neuropsychological domains, including cognitive abilities, adaptive behavior, temperament, and psychopathology. Moreover, the book examines a series of standard as well as novel methods and instruments, along with their psychometric properties, recent meta-analytic studies, and their cross-cultural applications. - Discusses psychometric issues and empirical studies that speak to same - Explores the family context in relation to children's behavioral outcomes - Features major personality measures as well as their cross cultural variations - Identifies the importance of coping and resilience in assessing personality and psychopathology - Examines precursors of aggression and violence for prediction and prevention

Understanding Extreme Sports: A Psychological Perspective Eric Brymer, Francesco Feletti, Erik Monasterio, Robert D. Schweitzer, 2020-03-30 Extreme sports, those activities that lie on the outermost edges of independent adventurous leisure activities, where a mismanaged mistake or accident would most likely result in death, have developed into a significant worldwide phenomenon (Brymer & Schweitzer, 2017a). Extreme sport activities are continually evolving, typical examples include BASE (an acronym for Buildings, Antennae, Span, Earth) jumping and related activities such as proximity flying, extreme skiing, big wave surfing, waterfall kayaking, rope free solo climbing and high-level mountaineering. While participant numbers in many traditional team and individual sports such as golf, basketball and racket sports have declined over the last decade or so, participant numbers in so called extreme sports have surged. Although extreme sports are still assumed to be a Western pastime, there has been considerable Global uptake. Equally, the idea that adventure sports are only for the young is also changing as participation rates across the generations are growing. For example, baby boomers are enthusiastic participants of adventure sports more generally (Brymer & Schweitzer, 2017b; Patterson, 2002) and Generation Z turn to extreme sports because they are popular and linked to escapism (Giannoulakis & Pursglove, 2017). Arguably, extreme sports now support a multi-billion dollar industry and the momentum seems to be intensifying. Traditional explanations for why extreme sports have become so popular are varied. For some, the popularity is explained as the desire to rebel against a society that is becoming too risk averse, for others it is about the spectacle and the merchandise that is associated with organised activities and athletes. For others it is just that there are a lot of people attracted by risk and danger or just want to show off. For others still it is about the desire to belong to sub-cultures and the glamour that goes with extreme sports. Some seek mastery in their chosen activity and in situations of significant challenges. This confusion is unfortunate as despite their popularity there is still a negative perception about extreme sports participation. There is a

pressing need for clarity. The dominant research perspective has focused on positivist theory-driven perspectives that attempt to match extreme sports against predetermined characteristics. For the most part empirical research has conformed to predetermined societal perspectives. Other ways of knowing might reveal more nuanced perspectives of the human dimension of extreme sport participation. This special edition brings together cutting-edge research and thought examining psychology and extreme sports, with particular attention paid to the examination of motivations for initial participation, continued participation, effective performance, and outcomes from participation. Genetics of Psychological Well-Being Michael Pluess, 2015-06-18 'In the past decade there has been an explosion of research into the psychology of well-being. While we know that psychological well-being is partly heritable, it is only recently that researchers have started to investigate the specific genetic factors that influence well-being. Such research explores not only heritability, based on traditional twin study designs, but also includes studies combining some of the most recent molecular genetic techniques and methods. This landmark book summarizes the state of knowledge regarding heritability and molecular genetics in positive psychology. Divided into four parts, it starts by exploring the basics of genetics and associated research methodology, providing the reader with the knowledge required to understand the empirical work presented throughout the volume. The second part of the book focuses on heritability estimates of the most important positive psychology concepts based on quantitative behavioural genetics studies. In the third section of the book, results from more recent molecular genetics studies are presented including candidate gene, gene-environment interaction, as well as genome-wide association studies. This section also contains chapters on epigenetics and imaging genetics, both relatively new methodologies that are just about to make their way into the field of positive psychology. The fourth and final part of the book discusses more overarching questions regarding the roles of genes and environment in the development of well-being as well as a review and discussion of the current state of knowledge and future direction in this new field of inquiry. The first book of its kind, *The Genetics of Psychological well-being* is a major contribution to the positive psychology literature, and important for all those in the fields of positive psychology, psychiatric genetics, and well-being.

Temperament and Character Correlates of Emotional Processing Patrick Martin Rouse,2013 A hypothesised association between personality and emotional processing was investigated within the framework of Cloninger's psychobiological theory. According to this model, personality development is based on the interaction between two domains: temperament and character. A non-experimental, correlational design was applied, using existing data from a sample of 630 South African first year psychology students who completed the Temperament and Character Inventory (TCI) and the University of Pennsylvania Computerised Neuropsychological Test Battery (PennCNP). Canonical correlation analysis yielded significant associations between character variables Self-Directedness, Cooperativeness, and Self-Transcendence as measured and defined by the TCI and items from Penn Facial Memory Test (CPF) and Penn Emotion Discrimination Task (ED40), respectively. In this exploratory study participants lower in Self-Directedness and Cooperativeness were more efficient in facial recognition compared to participants higher in these dimensions. Conversely, individuals higher in Self-Directedness and Cooperativeness were more accurate in the discrimination of happy and sad emotions, respectively. Participants with higher Self-Transcendence performed better in facial recognition but were less accurate in discriminating between happy and sad faces. These results affirm the importance of further research into the association between temperament and character and emotional processing.

Neurobiological Perspectives in Behavioral Addiction Jung-Seok Choi,Daniel Luke King,Young-Chul Jung,2019-07-25 Some classes of behaviors, including gambling, Internet gaming, and sexual behaviors, may lead to compulsive engagement for a minority of individuals. In extreme cases where individuals may feel unable to control these behaviors without external influence, these behaviors may be considered non-substance or behavioral addictions. Many such behaviors may occur predominantly online, such as gaming, social media, shopping, and pornography, and may be driven by constant accessibility via smartphone and other mobile device technologies. This Research Topic presents diverse papers on neurobiological evidence of behavioral addictions, encompassing gambling disorder, Internet-based disorders, including Internet gaming disorder and smartphone addiction, and compulsive sexual behaviors.
