

Is Sarcoidosis An Autoimmune Disease

David Geraint James, William Jones Williams

The Association of Other Autoimmune Diseases in Patients With Thyroid Autoimmunity Alessandro Antonelli, Salvatore Benvenga, 2018-11-02 Autoimmune thyroid diseases (AITD) are T cell-mediated organ-specific autoimmune disorders resulting from an immune dysregulation leading to a thyroid immune attack (Antonelli and Benvenga). Graves' disease and Hashimoto's thyroiditis are the two main clinical presentations of AITD, and their clinical hallmarks are thyrotoxicosis and hypothyroidism, respectively. In many cases, AITD may be associated in the same patient with other organ-specific autoimmune attacks (such as in the case of type II autoimmune polyglandular syndrome, or type I diabetes, etc). Furthermore, AITD and thyroid function abnormalities have been frequently described in patients with systemic rheumatologic autoimmune diseases. Conversely, patients affected with the above mentioned autoimmune disorders are more frequently affected by AITD. In this Research Topic, constituted by nineteen papers, we review and discuss new evidence about the association of other autoimmune diseases in patients with AITD. Among other organ-specific autoimmune disorders, the associations of AITD with chronic autoimmune gastritis (Cellini et al.), vitiligo (Baldini E et al.), lichen (Guarneri et al.), psoriasis (Ruffilli et al.), myasthenia gravis (Lopomo and Berrih-Aknin) and glomerulopathies (Santoro et al.) have been treated. Also the associations of AITD, in systemic autoimmune diseases have been treated (as Sjögren's syndrome, Baldini C et al.; systemic sclerosis, Fallahi et al.; systemic lupus erythematosus, Ferrari et al.; Antiphospholipid syndrome, Versini; sarcoidosis, Fazzi et al.; the autoimmune/inflammatory syndrome induced by adjuvants, Watad et al.; rheumatoid arthritis, Bliddal et al.; Hepatitis C Virus and mixed cryoglobulinemia, Ferri et al.; and, psoriathic arthritis, Ruffilli et al.). Furthermore peculiar aspects associated with post partum thyroiditis have been reviewed too (Di Bari et al., Le Donne et al.). The exact pathogenetic mechanisms underlying the above reported associations are not completely known. It has been hypothesized that the influence of genetic (Coppedè), and environmental factors (Antonelli and Benvenga), could lead to the onset of autoimmune phenomena in different organs in the same subject, characterized by predominance of a Th1 immune pattern at the beginning, and in the active phase of these disorders. In conclusion, an association of other autoimmune diseases in patients with thyroid autoimmunity has been shown, and this Research Topic provides an extensive update of the literature, and suggests interesting points for new investigations.

The Neurologic Involvement in Systemic Autoimmune Diseases, 2004-11-05 Systemic autoimmune diseases can

affect both the central and peripheral nervous systems in a myriad of ways and through a heterogeneous number of mechanisms leading to many different clinical manifestations. As a result, neurological complications of these disorders can result in significant morbidity and mortality. Advances in the diagnosis, laboratory investigations, and management of these conditions has placed an increasing burden on the practicing clinician to correctly assess and treat these patients. This volume of the Handbook of the Systemic Autoimmune Diseases will help the clinician and researcher better understand the current concepts of nervous system involvement from systemic autoimmune disorders, recognize current approaches to diagnosis and treatment, current controversies, and areas that need significant research efforts. It is believed that providing this approach in a single volume will facilitate its use as a frequent resource for all those caring for or investigating these patients and their diseases. Each chapter follows a consistent outline to provide the reader with important and useful information in an easy-to-navigate manner and is also liberally referenced to provide more primary source material for further consideration. The standardized approach to each chapter will allow the reader to be able to compare and contrast more efficiently the neurological complications of the autoimmune diseases discussed.

Sarcoidosis Donald Mitchell, Athol Wells, Stephen Spiro, David Moller, 2012-02-24 Highly Commended, BMA Medical Book Awards 2013 Sarcoidosis represents a major challenge for physicians-not just in respiratory medicine, but across a range of specialties. This book, with a multidisciplinary authorship of the highest standard, presents the most up-to-date thinking on all aspects of the condition, from epidemiology to clinical manife

Diagnostic Criteria in Autoimmune Diseases Yehuda Shoenfeld, Ricard Cervera, M. Eric Gershwin, 2010-06-08 According to the Autoimmune Diseases Coordinating Committee (ADCC), between 14.7 and 23.5 million people in the USA - up to eight percent of the population are affected by autoimmune disease. Autoimmune diseases are a family of more than 100 chronic, and often disabling, illnesses that develop when underlying defects in the immune system lead the body to attack its own organs, tissues, and cells. In Handbook of Autoimmune Disease, the editors have gathered in a comprehensive handbook a critical review, by renowned experts, of more than 100 autoimmune diseases, divided into two main groups, namely systemic and organ-specific autoimmune diseases. A contemporary overview of these conditions with special emphasis on diagnosis is presented. Each chapter contains the essential information required by attending physicians as well as bench scientists to understand the definition of a specific autoimmune disease, the diagnostic criteria, and the treatment.

Vitiligo Mauro Picardo, Alain Taïeb, 2010-03-26 Vitiligo has been, until recently, a rather neglected area in dermatology and medicine. Patients complain about this situation, which has offered avenues to quacks, and has led to the near orphan status of the disease. The apparently, simple and poorly symptomatic presentation of the disease has been a strong disadvantage to its study, as compared to other common chronic skin disorders such as psoriasis and atopic dermatitis. Vitiligo is still considered by doctors as a non disease, a simple aesthetic problem. A good skin-based angle of attack is also lacking because generalized vitiligo is clearly epitomizing the view of skin diseases as simple targets of a systemic unknown dysregulation (diathesis), reflecting the Hippocratic doctrine. This view has mostly restricted vitiligo to the manifestation of an auto-immune diathesis in the past 30 years. Thus, skin events, which are easily detected using skin biopsies in most other situations, have not been precisely recorded, with the argument that a clinical diagnosis was sufficient for the management (or most commonly absence of management) of the patient. This book is an international effort to summarize the information gathered about this disorder at the clinical, pathophysiological and therapeutic levels. Its primary aim is to bridge current knowledge at the clinical and investigative level, to point to the many unsolved issues, and to delineate future priorities for research.

80 Years of Hashimoto Disease S. Nagataki, Toru Mori, Kanji Torizuka, 1993 The aim of this volume is to describe the latest concepts of immunogenetics, clinical aspects and cellular and humoral autoimmunity of Hashimoto disease. The volume focuses on the definition, criteria, classification, diagnosis and aetiology of the disease.

Kelley's Textbook of Rheumatology William N. Kelley, 2005 Provides authoritative and encyclopedic coverage of not only the etiology and pathogenesis of the rheumatic diseases, but also of biology of the normal joint, immune and inflammatory responses, evaluation of the patient, musculoskeletal pain and the musculoskeletal exam, diagnostic tests and procedures, clinical pharmacology, and much more. This edition features a DVD-ROM that includes all of the images from the

book, additional 4-color images not included in the text, video clips of general examinations (approx. length 45 minutes) and screening examinations (approx. length 30 minutes). Each chapter also has a set of multiple choice questions for use for board review study included on the DVD.
