Experimental Slips and Human Error Bernard J. Baars, 2013-06-29 Whereas most humans spend their time trying to get things right, psychologists are perversely dedicated to error. Errors are extensively used to investigate perception, memory, and performance; some clinicians study errors like tea leaves for clues to unconscious motives; and this volume presents the work of researchers who, in an excess of perversity, actually cause people to make predictable errors in speech and action. Some reasons for this oddity are clear. Errors seem to stand at the nexus of many deep-psychological questions. The very concept of error presupposes a goal or criterion by comparison to which an error is an error; and goals bring in the foundation issues of control, motivation, and volition (Baars, 1987, 1988; Wiener, 1961). Errors serve to measure the quality of performance in learning, in expert knowledge, and in brain damage and other dysfunctional states; and by surprising us, they often call attention to phenomena we might otherwise take for granted. Errors also seem to reveal the natural joints in perception, language, memory, and problem solving-revealing units that may otherwise be invisible (e. g. , MacKay, 1981; Miller, 1956; Newell & Simon, 1972; Treisman & Gelade, 1980).

*Advances in Human Error, Reliability, Resilience, and Performance* Ronald L. Boring, 2019-06-01 This book brings together studies broadly addressing human error from different disciplines and perspectives. It discusses topics such as human performance; human variability and reliability analysis; medical, driver and pilot error, as well as automation error; root cause analyses; and the cognitive modeling of human error. In addition, it highlights cutting-edge applications in safety management, defense, security, transportation, process controls, and medicine, as well as more traditional fields of application. Based on the AHFE 2019 International Conference on Human Error, Reliability, Resilience, and Performance, held on July 24-28, 2019, Washington D.C., USA, the book includes experimental papers, original reviews, and reports on case studies, as well as meta-analyses, technical guidelines, best practice and methodological papers. It offers a timely reference guide for researchers and practitioners dealing with human error in a diverse range of fields.

**Human Factors of Driver-vehicle Interaction in the IVHS Environment. Final Report** T. B. Sheridan,1991 This report is a critical review of human factors associated with proposed intelligent vehicle-highway systems (IVHS). In particular, factors such as mental workload, driver errors, and warnings related to proposed introductions of advanced driver information systems (ADIS) and advanced vehicle control systems (AVCS) are considered. Theoretical criteria and models capable of characterizing the experimental data and that are useful for planning experiments are reviewed. Driver-in-the-loop simulation experiments are proposed that would measure driver workload and performance changes, good or bad, under various IVHS configurations. The report is meant to be an overview of candidate approaches and considerations.
