Fossil Vertebrates of Greece Vol. 2 Evangelos Vlachos, 2021-10-23 This 2-volume set provides a state-of-the-art study of the fossil record and taxonomy of the main vertebrate groups from Greece. Greece stands between 3 continents and its vertebrate fossil record is of great importance for paleontological and evolutionary studies in Europe, Asia and Africa. Fossils from classic, world-famous localities (e.g., Pikermi, Samos) form an essential part of the collections of the most important museums in the world and have been studied by numerous scientists. Recent paleontological research led to the discovery and study of numerous new sites. The volumes contain a taxonomic review of all named and identified taxa, their taxonomic history and current status, as well as historical, phylogenetic and biogeographic information. Volume 2 contains a synopsis of the fossil record and taxonomy of important groups of mammals represented in the fossil record of Greece. The volume starts with specific chapters on laurasiatherians like insectivores and bats, moving on to the main part of the book that deals with three of the most important fossil groups in the country. The fossil record of even-toed animals is summarized with chapters on bovids, cervids, suoids, anthracotheres, hippos, giraffes, and tragulids. The fossil record of odd-toed animals is presented with special chapters on horses, tapirs, rhinos, and chalicotheres. The last part of this volume deals with meat-eating, carnivorous groups, like felids, viverrids, hyaenas, canids, bears, ailurids, mephitids and mustelids. The volume ends with a special chapter on insular endemic mammals from the various islands of Greece.

Atlas of terrestrial mammals of the Ionian and Aegean islands Marco Masseti, 2012-10-30 The goal of this book is to foster better knowledge of the mammalian fauna of the Mediterranean islands. The atlas presents the current state of knowledge of the past and present distribution of the non-flying terrestrial mammals of the Ionian and Aegean islands. It provides a distribution map for each species with extensive references and a description of all the mammalian taxa. The book also focuses on the important role of human beings in the redefinition of the insular ecological equilibrium, as well as on the environmental impact of biological invasions. The protection and study of this fauna can provide an opportunity for testing a range of different evolutionary theories.

Volume 1 contains a synopsis of the fossil record and taxonomy of important groups of vertebrates represented in the fossil record of Greece. The volume deals with some of the early splitting clades, including the basal and enigmatic conodonts and basal tetrapods like fishes, amphibians, and reptiles like lizards, snakes, crocodiles, turtles and tortoises. The second part of the volume deals with basal mammalian clades, some of which are quite characteristic for the fossil record of the country: aardwarks, hyraxes, proboscideans, elephants and mammoths, sea cows, rodents, and lagomorphs. The volume ends with special chapters on the primate fossil record of the country, including some of our most recent and distant relatives.

**The Biology of Terrestrial Isopods** Spyros Sfenthourakis, 2003-12-01 Oniscids are wonderful model organisms for studies addressing more general biological questions, and they arguably demonstrate the best evolutionary progression in any extant group of organisms. Their unique properties as terrestrial crustaceans living in a wide range of habitats from coast to desert offer great advantages to study physiological and behavioural adaptations, ecological, phylogenetic, and biogeographical patterns, and evolutionary processes. This volume contains contributions, which were presented at the 5th International Symposium on the Biology of Terrestrial Isopods that took place on Crete, May 2001, and which was dedicated to the memory of the late Marie Flasarova. All papers have been peer-reviewed before inclusion in the book. The contributions give a well balanced account of current research on all aspects - covering systematics, ecology, biogeography, morphology, physiology, immunology, endocrinology, behaviour, and host-parasite relationships - of biology of the remarkable creatures included in the Isopoda suborder Oniscidae, the only crustaceans that have conquered almost all terrestrial habitat types. This book will prove useful to all crustacean researchers, working on either terrestrial, freshwater or marine organisms.

Freshwater key biodiversity areas in the Mediterranean basin hotspot V. Barrios, Santiago Carrizosa, W.R.T. Darwall, Jörg Freyhof, C. Numa, K. Smith, 2014-01-01 While the Mediterranean basin biodiversity hotspot is well known for its globally important biodiversity, its freshwater biodiversity has not been as widely recognized for its importance. Through this project, freshwater key biodiversity areas (KBAs) have now been identified, mapped and validated throughout much of the Mediterranean hotspot. It is now important to raise awareness of their status as validated freshwater KBAs and to develop plans for appropriate conservation actions at these sites, as this biodiversity is highly threatened largely due to the conflicting demands upon a diminishing supply of fresh water which is further exacerbated by the increased severity of drought across the region.

*Lagomorph Biology* Paulo C. Alves, Nuno Ferrand, Klaus Hackländer, 2007-12-29 Lagomorphs are a mammalian order which includes rabbits, hares and pikas. They are distributed throughout the world and are of both scientific and public interest as they are classified between endangered and pest species. In addition, some have a high economic value as

important game species. In the last few decades, a huge amount of information was made available to the scientific community and resulted in remarkable advances on all aspects of Lagomorph biology. However, this information is dispersed in multiple scientific and non-scientific journals. This book provides an updated synthesis of the current knowledge on Lagomorph biology.
