*Selenium Interview Questions and Answers - English Navneet Singh*, Here are some commonly asked Selenium interview questions along with their answers: What is Selenium? Selenium is an open-source automation testing tool used for automating web applications across different browsers and platforms. It provides a suite of tools for writing and executing automated tests in various programming languages like Java, Python, C#, etc. What are the different components of Selenium? Selenium WebDriver, Selenium IDE, and Selenium Grid are the three main components of Selenium. Selenium WebDriver: It is a powerful API that allows you to interact with web elements and automate browser actions. Selenium IDE: It is a record-and-playback tool for creating quick tests in the Firefox browser. Selenium Grid: It is used for parallel test execution across multiple browsers and platforms. What programming languages are supported by Selenium WebDriver? Selenium WebDriver supports multiple programming languages, including Java, Python, C#, Ruby, and JavaScript (Node.js). What is the difference between `findElement()` and `findElements()` in Selenium WebDriver? `findElement()` is used to locate the first element matching the specified locator strategy. If no element is found, it throws a `NoSuchElementException`. `findElements()` is used to locate all elements matching the specified locator strategy. It returns a list of web elements or an empty list if no elements are found. What is a `WebElement` in Selenium? `WebElement` represents an HTML element on a web page. It provides methods for interacting with web elements, such as clicking, typing, getting text, etc. Explain implicit wait and explicit wait in Selenium. Implicit Wait: Implicit wait instructs the WebDriver to wait for a certain amount of time before throwing an exception when attempting to locate an element. It is applied globally to all elements and waits for a fixed amount of time. Explicit Wait: Explicit wait is used to wait for a specific condition to occur before proceeding with the next steps in the test. It is applied to a specific element and waits until the condition is met, or a timeout occurs. What is Page Object Model (POM) in Selenium? Page Object Model (POM) is a design pattern used in Selenium for creating an object-oriented representation of web pages and their elements. It separates the test logic from the page structure, making the tests more maintainable and reusable. What is TestNG? How is it used with Selenium? TestNG is a testing framework for Java that provides various features like annotations, assertions, test parameterization, and test grouping. It is commonly used with Selenium for organizing and executing test cases, generating test reports, and managing dependencies. How do you handle dynamic elements in Selenium? Dynamic elements are elements on a web page whose attributes or properties change

dynamically. Selenium provides techniques like implicit wait, explicit wait, and FluentWait to handle dynamic elements by waiting for the element to become available before performing actions on it. What are the advantages of using Selenium for automation testing? Some advantages of using Selenium for automation testing include: Cross-browser compatibility: Selenium supports testing across different browsers like Chrome, Firefox, Safari, etc. Language support: Selenium supports multiple programming languages, allowing testers to use their preferred language for writing tests. Open-source: Selenium is an open-source tool, meaning it is free to use and has a large community of developers contributing to its development and support. Integration with other tools: Selenium can be easily integrated with other testing frameworks, build tools, and continuous integration (CI) systems for seamless automation testing workflows. These are some common Selenium interview questions that you may encounter during interviews. Make sure to review the concepts thoroughly and practice writing Selenium test scripts to prepare effectively.

**FREQUENTLY ASKED INTERVIEW QUESTION'S** Mayank Johri, # Introduction This is my attempt to consolidate all the tough & useful questions we can have regarding Selenium using Python. This is similar to my previous attempt for creating a basic book on Python \_Frequently Asked Interview Questions : Core Python\_ where I am consolidating FAQ's on **\*\*Core Python\*\*** only. I have two main objectives in writing this book, - First is it helps you find your next destination ;) and - Second it acts as a guide for learning Selenium through simple tasks. In order to achieve the second one, I have consolidated the list of questions in the appendix at the end. You can try to read the question and find the solution (\*Thanks **\*\*Abhishek\*\*** for suggesting it ☺\*) yourself and later check the answer, if you think your found answer is better, do email it to me (mayankjohri @ gmail . com), so that I can add it in this book. **\*\*NOTE\*\*** :arrow\_right: \*This book will **\*\*only cover selenium\*\*** and will not cover any questions for Testing Frameworks such as PyTest etc. I will be creating another book on that topic in near future.\* That book will extensively cover Testing Frameworks and nothing else. :) **\*\*Future Plans:\*\*** Plan is to have more than 501 questions with answers once the final version is released by end of 2018. > **\*\*Current Status\*\***: 101 Questions have been added in various sections. **\*\*POM\*\*** & **\*\*best practices\*\*** have the least and will be adding more in future versions and Cross browser testing section is almost empty :(
