The Paranormal Equation James Stein, 2012-12-26 Most of us think science is incapable of explaining supernatural phenomena. This would include everything from ghosts and communication with the dead to extrasensory perception (ESP), precognition, and telekinesis. Scientists are generally highly skeptical of the existence of such phenomena because of the lack of the rigorous documentation that science requires. Nevertheless, many great scientists have believed—and do believe—in the supernatural. The Paranormal Equation presents an argument for the existence of supernatural phenomena based on the mathematics and science discovered during the last century. It also explains why supernatural phenomena must exist if the universe satisfies certain conditions—conditions which are accepted by many working scientists. The Paranormal Equation explores such questions as: How can we distinguish between the truly unknown and the supernatural? How have scientists attempted to study the supernatural? What are the rational reasons for believing in the supernatural? Which hypotheses about the universe mandate the existence of supernatural phenomena? Anyone interested in how science is beginning to understand and even explain the seemingly unexplainable will want to read this fascinating new title.

The Way of Science Dennis R. Trumble, 2013-07-16 How science can convey a profound sense of wonder, connectedness, and optimism about the human condition. This book makes a compelling case that now more than ever the public at large needs to appreciate the critical-thinking tools that science has to offer and be educated in basic science literacy. The author emphasizes that the methods and facts of science are accessible to everyone, and that, contrary to popular belief, understanding science does not require extraordinary intelligence. He also notes that scientific rationality and critical thinking are not only good for our physical well-being but also are fully in sync with our highest moral codes. He illustrates the many ways in which the scientific worldview offers a profound sense of wonder, connectedness, and optimism about the human condition, an inspiring perspective that satisfies age-old spiritual aspirations. At a time of daunting environmental challenges and rampant misinformation, this book provides a welcome corrective and reason to hope for the future.

The Demon-Haunted World Carl Sagan, 2011-07-06 NEW YORK TIMES BESTSELLER • From the renowned astronomer and author of *Cosmos* comes a “powerful [and] stirring defense of informed rationality” (The Washington Post Book World) in a world where fake news stories and Internet conspiracy theories play to a disaffected American populace.

LOS ANGELES TIMES BOOK PRIZE WINNER • “Glorious . . . A spirited defense of science . . . From the first page to the last, this book is a manifesto for clear thought.”—Los Angeles Times How can we make intelligent decisions about our increasingly technology-driven lives if we don’t understand the difference between the myths of pseudoscience, New Age thinking, and fundamentalist zealotry and the testable hypotheses of science? Casting a wide net through history and culture, Pulitzer Prize-winning author and distinguished astronomer Carl Sagan argues that scientific thinking is critical not only to the pursuit of truth but to the very well-being of our democratic institutions. He examines and authoritatively debunks such celebrated fallacies as witchcraft, faith healings, demons, and UFOs. And yet, disturbingly, in today’s so-called information age, pseudoscience is burgeoning, with stories of alien abduction, “channeling” past lives, and communal hallucinations commanding growing attention and respect. As Sagan demonstrates with lucid eloquence, the siren song of unreason is not just a cultural wrong turn but a dangerous plunge into darkness that threatens our most basic freedoms.

The American Popular Novel After World War II David Willbern, 2013-03-29 Through the perspectives of selected best-selling novels from the end of World War II to the end of the 20th century—including *The Catcher in the Rye*, *To Kill a Mockingbird*, *The Godfather*, *Jaws*, *Beloved*, *The Silence of the Lambs*, and *Jurassic Park*—this book examines the crucial issues the U.S. was experiencing during those decades. These novels represent the voices of popular conversations, as Americans considered issues of family, class, racism and sexism, feminism, economic ambition, sexual violence, war, law, religion and science. Through the windows of fiction, the book surveys the Cold War and anti-communism, the prefeminist era of the 1950s and the sexual revolution of the 1970s, forms of corporate power in the 1960s and 1980s, the traumatic legacies of slavery and Vietnam, the American fascination with lawyers, cops and criminals, alternate styles of romance in the era of late capitalism, our abiding distrust of science, and our steadfast wonder about the Great Mysteries.

Dispatches from the Vaccine Wars Christopher A. Shaw, 2021-08-31 Enter the trenches of the bloodiest battles you've never heard of: the Vaccine Wars. Professor Christopher A Shaw discovered, after a deep-dive literature search on aluminum impacts on humans and animals, that aluminum hydroxide, an adjuvant in the anthrax vaccine, had a significantly negative impact on motor functions and reflexes of patients in the literature. After that finding, he did what scientists are supposed to do and kept following the leads. However, organizations like WHO dismissed him immediately. Those powerful organizations either knew what he knew, that aluminum vaccine adjuvants were harmful, or they simply didn’t care. In either case, two possible reasons for the lack of response became clear to Shaw and his colleagues: dogma and money. The first had served to convince most of the world’s medical professionals that Shaw had to be wrong because, after all, “the science was settled.” And, behind much of this was the naked fact of how much money vaccines brought in to cover the pharmaceutical industry’s profit margin. The combination of those two have the finger prints of various Big Pharma companies smudged all over the question of vaccine safety, which included the demonization of both scientists and lay scholars who raised even the tamest questions about safety and the push for vaccine mandates around the world. After these events, Shaw decided to dig deeper. *Dispatches from the Vaccine Wars* is a comprehensive look at the origin of vaccination and the oversight of vaccines by various regulatory bodies in the United States and in Canada. The book provides not only the official view on vaccines safety

and efficacy, but also provides a critical analysis on which such views are based. Aluminum and other compounds that may contribute to autism spectrum disorder are discussed at length. Professor Shaw also analyzes the corporate influences driving vaccine uptake worldwide and provides an in depth look at the push for mandatory vaccination. Dispatches from the Vaccine Wars evaluates the extent to which vaccinology has become a cult religion driving attempts to suppress divergent scientific opinions. Finally, the book delves into the COVID-19 pandemic and what it means for the future of us all.

Free Radicals Michael Brooks, 2012-04-26 “An exuberant tour through the world of scientists behaving badly” (The New York Times). They may have a public image as cool, logical, levelheaded types. But in reality, scientists will do pretty much anything—take drugs, follow mystical visions, lie, and even cheat—to make a discovery. In *Free Radicals*, physicist and journalist Michael Brooks seamlessly weaves together true stories of the “mad, bad and dangerous” men and women who have revolutionized the scientific world, and offers a fast-paced and thrilling exploration of the real process behind discovery (The Times, London). Brooks also traces the cover-up back to its source: the scientific establishment’s reaction to the public fear of science after World War II. He argues that it is high time for science to come clean about just how bold and daring scientists really are. “Not all scientists are nerds. In *Free Radicals*, physicist Michael Brooks tries to dispel the notion that scientists are stuffy, pen-protector-polishing bookworms.” —The Washington Post “Insightful . . . A page-turning, unvarnished look at the all-too-human side of science.” —Kirkus Reviews

American Public School Law Kern Alexander, M. David Alexander, 2001 Uses the case method to provide graduate students in education as well as law students with a comprehensive view of the complex web of laws and court decisions governing the US public school system. The authors, Kern Alexander (president, Murray State U., Kentucky) and M. David Alexander (educational leadership and policy studies, Virginia Tech), range across all of the civil, criminal, and constitutional laws that touch students, teachers, and administrators. New to this edition are discussions of the Supremacy Clause, the Eleventh Amendment, sovereign powers of states, charter schools, and the refinement of the legal definition of free public schools. Funding for Justice Stan Karp, 1997 Increased funding is vital to any educational renewal. The papers in this publication provide a critical look at the educational system and show that it is clearly a dual system that, more than 40 years after the

Brown vs. the Board of Education decision remains largely separate and unequal. A key issue is that of educational standards. The glaring weakness in most proposals for academic standards is the conspicuous absence of resources needed to realize them. Without dramatic improvements in the conditions of teaching and learning, standards will neither raise student achievement nor ensure that those who have been worst served by the schools historically will finally get access to better educational programs. The 29 chapters of this book focus on reforms at Federal, state, and local levels, and promote the common theme of educational equity. A glossary is included. Each chapter contains references. (SLD)

Quotes by Carl Sagan Lilith Regan,2020-03-10 Somewhere, something incredible is waiting to be known.We're made of star stuff. We are a way for the cosmos to know itself.For small creatures such as we the vastness is bearable only through love.If you want to make an apple pie from scratch, you must first create the universe.Imagination will often carry us to worlds that never were. But without it we go nowhere.Science is not only compatible with spirituality; it is a profound source of spirituality.For me, it is far better to grasp the Universe as it really is than to persist in delusion, however satisfying and reassuring.Absence of evidence is not evidence of absence.We are like butterflies who flutter for a day and think it is forever.Every one of us is, in the cosmic perspective, precious. If a human disagrees with you, let him live. In a hundred billion galaxies, you will not find another.
