Coldwater Fisheries and Aquaculture Management Mohd Ashraf Rather,Faisal Rashid Sofi,Adnan Amin,Kawkabul Saba,2023-12-01 This book is a rich resource of important information on coldwater fish farming and coldwater fisheries management, including new research and recent technological advances. It aims to provide an understanding of the underlying mechanisms of coldwater physiology of fishes, which is essential for effective fishery management and for taking advantage of their vast potential application in aquaculture. *Coldwater Fisheries and Aquaculture Management: Technology for Sustainable Food Production* elaborates on key aspects associated with reproductive biology and endocrinology of coldwater fishes, such as gonadal development and maturation, vitellogenesis, steroidogenesis, whole genome information of fishes, transcriptomics, proteomics, and more. It also looks at genetic modification of coldwater fishes, phytobiotic-based feed to attain profitability in aquaculture, and the nutritional requirements of coldwater fishes, such as plant-based proteins in fish diets and feeding carbohydrates to fish. It also describes the beneficial dietary nutrition of fish consumption by humans. Several chapters address the various challenges to coldwater fish and fishery management, such as fish bacterial diseases (along with their immune components and defense mechanisms), unpredictable nature of climate change on fish, water pollution, etc. The volume also offers strategies on the sustainable management of fish that include looking at pollution in freshwater ecosystems, biotechnological interventions, predicting threats to fish from climate change, and other factors. This volume will be of value to those in fishery management and fish science as well as to marine researchers, faculty and students, and other involved with aquaculture science and management.

Animal Health and Production: Identifying Challenges and Finding a Way Forward Izhar Hyder Qazi,Yangchun Cao ,Jesus R. Requena,2025-11-24 It has been said that “the difficulty with predicting the future is that uncertainty seems to increase exponentially with the number years in the future, simply because we can’t predict technology let alone geopolitical upheavals”. By the year 2050 our world will grow to 10 billion people, and we need to feed them with shrinking resources. At the same time, we must take into consideration that global warming will have a profound impact on the animal production

systems in coming decades, if no timely measures are adopted to address this pressing issue. These issues desperately need to be addressed, and certainly solutions to these pressing problems will be intertwined, as we strive to feed a growing population, while building sustainable and efficient food systems. Clearly, health is at the heart of the sustainable animal production systems, therefore, optimizing the animal health and mitigating the stresses of pathogen- and production-related diseases is also essential. It is now well-established that animals are more susceptible to diseases when they are kept under stressful environments. Therefore, improved animal management systems focusing on disease prevention are essential for optimized production of animals. In addition, it has been said that over 60% of pathogens that cause human diseases originate from domestic or wild animals, therefore, protecting the health of animals and the environment protects human health. Moreover, antimicrobial resistance (AMR) has been regarded one of the most pressing health issues of the present time and as well as is a growing threat to livelihoods and global food security. It is daunting to even imagine a world where there is almost no cure for diseases in humans, animals, and plants. This worst-case scenario might turn-out to be a reality as pathogenic microbes develop resistance to the antimicrobial arsenals that are used to combat them. The societal demand regarding public health (zoonoses, AMR etc.), welfare, and sustainability (i.e., feed efficiency, methane emission) is also increasing. The good news is that solutions do exist and the quest for efficient production systems, intelligent breeding, improved nutrition, viable diagnostic methods, tailored-made biosecurity procedures, and integrated health and welfare management is ongoing with the scientific community and industry. Fittingly, it has been said that all of the world's big problems are multidisciplinary in nature, therefore, the present-day animal scientists and veterinary researchers must break their expertise-based cocoons and work in a collaborative manner to sustainably meet the on-going and future increasing demand of animal source foods and to ensure good health of animals. Finally, as we search for quantum leaps in productivity, novel and innovative technological solutions need to be put in the practice to achieve these envisaged goals.

1. Studies focused on sustainable animal production, particularly those centred on the principle of “clean, green and ethical animal management systems”.
2. Disease management (including transboundary diseases, zoonoses, of course) and control strategies
3. Studies focusing on alternatives to antibiotic use in animal health and production systems and mitigation of AMR threat
4. Mechanistic studies focused on the host-pathogen interactions
5. Practice and the development of novel and classical therapeutics aimed at improving health and production
6. Studies using innovative technological and bioinformatic tools to address the pressing issues relevant to animal health and production
7. Studies focused on bringing the animal production systems on the path to climate neutrality

Guía práctica de interpretación analítica y diagnóstico diferencial en pequeños animales. Hematología y bioquímica

Ignacio Mesa, Ignacio López, 2021-01-15T00:00:00+01:00 Manual científico-técnico centrado fundamentalmente en la descripción de los principales algoritmos de diagnóstico diferencial utilizados en el campo de la hematología y bioquímica en la clínica de pequeños animales. Con motivo de optimizar la labor de los veterinarios clínicos en su consulta diaria, esta obra proporciona las herramientas necesarias para orientar y facilitar, entre otros aspectos, el diagnóstico de las principales condiciones en las que la hematología y la bioquímica juegan un papel fundamental, así como establecer su etiología a partir de determinados signos clínicos. Los autores, especialistas en la materia, suministran, además de los citados algoritmos, otros recursos (tablas, imágenes, etc.) que complementan la obra y la convierten en un manual de obligada consulta dentro de la clínica de perros y gatos.

A pesquisa no Brasil: Ciências da vida, 2002

Exames laboratoriais em medicina veterinária Morag G. Kerr, 2003 'Exames laboratoriais em medicina veterinária'

cobre todos os aspectos da bioquímica clínica e hematologia básicas e inclui a interpretação, texto a texto, dos resultados de laboratório. São fornecidas informações sobre técnicas de obtenção de amostras, seleção e uso de um laboratório externo, assim como a realização de testes - à beira do leito - e no laboratório da clínica. Também são incluídas instruções passo a passo para os testes no ponto de assistência mais usados, um guia para a avaliação de instrumentos a serem utilizados na clínica e uma explicação detalhada dos princípios de contagem por impedância e análise fotométrica. O livro será ideal para os clínicos que necessitam de um guia para o trabalho no laboratório e para os estudantes de medicina veterinária que estejam estudando patologia clínica e medicina de laboratório. A segunda edição foi totalmente adaptada para refletir os

avanços nas técnicas diagnósticas e inclui novos capítulos sobre endocrinologia diagnóstica e testes de vírus em felinos, assim como um capítulo bastante extenso sobre perfis diagnósticos e reconhecimento de padrões.
